

Oct. 6, 1915

I joined the tomato club because I thought it was a good thing of my own my tenth of an acre was on good rich soil I had it broke up real deep and used about one third of a sack of guano the only fertilizer I used

I sowed my but had the second day of April and set my tomatoes out the fifteen of May I did not hoe my tomatoes a time they were only plowed twice my plants did not have any diseases I got here my tomatoes in large tubs and took them out the red ones in cans together and the pale together marked the Pale ones

I did not grow any together on my tenth except tomatoes

We had lots of fun at our meetings we did our canning under a shelter out in the woods in the shade we kept our yard clean for we had company nearly every day we canned one day we were canning and I was learning dinnery one day and the canner ripe fell out and had to wait till the canner got cold and we had done fun while the canner was cold

I have learned lots about canning the club work has helped me in several

ways

I do not know how much profit I have  
on my teeth for I have not sold my  
tomatoes
