

Oct. 6 1915

I joined the tomato club to learn how
can and to make some money of my
own my tenth of an acre was on good
rich soil. I had it broke up real deep
and used about one third of a sack
of guano the only fertilizer I used.

I sowed my hot bed the second day
of April and set my tomatoes out the
fifteenth of my. I did not hoe my tomatoes
a time they were only plowed twice
my plants did not have any disease I
gathered my tomatoes in a large tubs
and took them out in small baskets
and scalded them ~~out in small~~ put
the red ones in cans together and the
pale ones together marked the pale
ones.

I did not grow any thing on my
tenth of an acre except tomatoes.

We had lots of fun at our meeting we
did our canning under a shelter out in
the woods in the shade we kept our yard
clean for we had company nearly every
day we canned.

I have learned lots about canning the
club work has helped me in several ways.
