COLLEGE CALENDAR.

1903.

Thursday,	July	9,	{ Entrance examination at each county court-house, 10 A. M.
Wednesday,	September	2,	{ Entrance examination at the College, 9 A. M.
Thursday,	September	3,	First Term begins; Registration Day.
Thursday,	November	26,	Thanksgiving Day.
Tuesday,	December	22,	First Term ends.

1904.

Tuesday,	January	5,	Second Term begins; Registration Day.
Saturday,	March	12,	Second Term ends.
Monday,	March	14,	Third Term begins; Registration Day.
Sunday,	May	22,	Baccalaureate Sermon.
Monday,	May	23,	Alumni Day.
Tuesday,	May	24,	Annual Oration.
Wednesday,	May	25,	Commencement Day.

BOARD OF TRUSTEES.

(State Board of Agriculture).

S. L. PATTERSON, *President ex officio*, Raleigh.

T. K. BRUNER, *Secretary ex officio*, Raleigh.

JOHN M. FOREHAND, Rockyhock, First District.

J. B. STOKES, Windsor, Second District.

WM. DUNN, Newbern, Third District.

C. N. ALLEN, Auburn, Fourth District.

R. W. SCOTT, Melville, Fifth District.

A. T. MCCALLUM, Red Springs, Sixth District.

J. P. McRAE, Laurinburg, Seventh District.

R. L. DOUGHTON, Laurel Springs, Eighth District.

W. A. GRAHAM, Machpelah, Ninth District.

A. CANNON, Horse Shoe, Tenth District.

BOARD OF VISITORS.

W. S. PRIMROSE, *President*, Raleigh.

R. L. SMITH, *Secretary*, Albemarle.

D. A. TOMPKINS, Charlotte.

FRANK WOOD, Edenton.

MATT. MOORE, Kenansville.

W. H. RAGAN, High Point.

DAVID CLARK, Charlotte.

GEORGE HOWARD, Tarboro.

W. J. PEELE, Raleigh.

J. FRANK RAY, Franklin.

CHARLES W. GOLD, Wilson.

S. L. PATTERSON, Commissioner of Agriculture, *ex officio*.

GEO. T. WINSTON, President of the College, *ex officio*.

FACULTY.

GEORGE TAYLOE WINSTON, A.M., LL.D., President and Professor of Political Economy.

WILLIAM ALPHONSO WITHERS, A.M., Professor of Chemistry.

DANIEL HARVEY HILL, A.M., Professor of English.

WALLACE CARL RIDDICK, A.B., C.E., Professor of Civil Engineering and Mathematics.

FREDERICK AUGUSTUS WEIHE, M.E., Ph.D., Professor of Physics and Electrical Engineering.

FREDERICK ELISHA PHELPS, Captain U. S. Army (retired), Professor of Military Science and Tactics.

HENRY MERRYMAN WILSON, A.B., Professor of Textile Industry.

✓ CHARLES WILLIAM BURKETT, M.Sc., Ph.D., Professor of Agriculture.

THOMAS MURRITT DICK, U. S. Navy, Professor of Mechanical Engineering.

TAIT BUTLER, V.S., Professor of Veterinary Science.

FRANK LINCOLN STEVENS, M.S., Ph.D., Professor of Biology.

BENJAMIN WESLEY KILGORE, M.S., Lecturer on Soils and Fertilizers.

ROBERT E. LEE YATES, A.M., Assistant Professor of Mathematics.

GEORGE STRONACH FRAPS, B.S., Ph.D., Assistant Professor of Chemistry.

CHALMER KIRK McCLELLAND, M.S., Assistant Professor of Agriculture.

CHARLES BENJAMIN PARK, Superintendent of Shops.

WILLIAM ANDERSON SYME, B.S., Instructor in Chemistry.

THOMAS ALFRED CHITTENDEN, B.S., Instructor in Mechanical Drawing.

VIRGIL WILLIAM BRAGG, Instructor in Wood-working.

THOMAS NELSON, Instructor in Weaving and Designing.

CHARLES LEMUEL FISH, B.S., Instructor in Civil Engineering.
FRANKLIN SHERMAN, B.S.A., Instructor in Entomology.
EDWIN BENTLEY OWEN, B.S., Instructor in English.
HARRY CASPAR WALTER, B.S., Instructor in Electrical Engineering.
JOHN CHESTER KENDALL, B.S., Instructor in Dairying.
MRS. FRANK LINCOLN STEVENS, Instructor in Biology and Zoology.
SAMUEL EDWARD WEBER, B.S., Instructor in Drawing.
PHILIP ROLAND FRENCH, B.S., Instructor in Dyeing.
CARROLL LAMB MANN, B.S., Instructor in Mathematics.
ALESTER GARDEN HOLMES, B.S., Instructor in Mathematics.
CHARLES WIGG MARTIN, Assistant in Botany.
PINCKNEY GUSTAVE DEAL, Instructor in Forge Shop.

OTHER OFFICERS.

MARSHALL DeLANCEY HAYWOOD, Librarian.
ARTHUR FINN BOWEN, Bursar.
FREDERICK ERASTUS SLOAN, B.S., Registrar.
BENJAMIN SMITH SKINNER, Farm Superintendent and Steward.
JAMES RUFUS ROGERS, A.B., M.D. Physician.
MRS. DAISY LEWIS, Hospital Matron.

AGRICULTURAL EXPERIMENT STATION DEPARTMENT.

GEORGE TAYLOE WINSTON, A.M., LL.D., President.
BENJAMIN WESLEY KILGORE, M.S., Director.
WILLIAM ALPHONSO WITHERS, A.M., Chemist.
WILBUR FISK MASSEY, C.E., Horticulturist.
CHARLES WILLIAM BURKETT, M.Sc., Ph.D., Agriculturist.
TAIT BUTLER, V.S., Veterinarian.
FRANK LINCOLN STEVENS, M.S., Ph.D., Biologist.

MILITARY ORGANIZATION.

FRANKLIN SHERMAN, Jr., B.S. Agr., Entomologist.
 JOHN STRANCHON JEFFREY, Poultryman.
 GEORGE STRONACH FRAPS, Ph.D., Assistant Chemist.
 JOHN CHESTER KENDALL, B.S., Assistant, Dairy Husbandry.
 BENJAMIN FRANKLIN WALTON, B.S., Asst., Field Experiments.
 BENJAMIN SMITH SKINNER, Farm Superintendent.
 ARTHUR FINN BOWEN, Bursar.

MILITARY ORGANIZATION.

CAPTAIN FREDERICK E. PHELPS, U. S. Army (retired),
 Commandant.

Staff.

L. N. BONEY, Major.
 W. L. DARDEN, Captain and Adjutant.
 H. P. FOSTER, Captain and Quartermaster.
 C. E. TROTTER, First Lieutenant and Hospital Steward.

Non-Commissioned Staff.

J. B. HARDING, Sergeant-major.
 W. J. PATTON, Quartermaster Sergeant.
 P. S. GRIERSON, Color Sergeant.

Band.

E. T. ROBESON, Captain and Instructor.
 J. H. PARKER, First Lieutenant.
 H. L. ALDERMAN, Second Lieutenant.
 B. F. HUGGINS, First Sergeant.
 J. P. ROSE, Chief Musician.
 R. H. HARPER, Drum-major.
 H. B. CARTWRIGHT, Sergeant.
 E. C. BAGWELL, Sergeant.
 J. F. McINTYRE, Sergeant.

Company A.

A. O. BRAY, Trumpeter.
E. E. CULBRETH, Captain.
E. S. LYTCH, First Lieutenant.
E. E. ETHERIDGE, Second Lieutenant.
T. T. ELLIS, Third Lieutenant.
F. C. PHELPS, First Sergeant.
J. A. MILLER, Second Sergeant.
JAMES McKIMMON, Third Sergeant.
W. M. McKINNON, Fourth Sergeant.
B. A. BROOM, First Corporal.
R. C. LEHMAN, Second Corporal.
F. W. HADLEY, Third Corporal.
G. P. MYATT, Fourth Corporal.

Company D.

C. L. CREECH, Captain.
G. W. ROGERS, First Lieutenant.
W. CLARK, Jr., Second Lieutenant.
J. S. P. CARPENTER, Third Lieutenant.
W. RICHARDSON, First Sergeant.
W. W. BARBER, Second Sergeant.
JESSE M. HOWARD, Third Sergeant.
A. C. WHARTON, Jr., Fourth Sergeant.
W. M. CHAMBERS, First Corporal.
E. G. PORTER, Second Corporal.
W. G. FINCH, Third Corporal.

Company B.

J. D. FERGUSON, Captain.
J. M. KENNEDY, First Lieutenant.
J. J. MORRIS, Second Lieutenant.
G. Y. STRADLEY, Third Lieutenant.
H. M. HUNTER, First Sergeant.

J. P. GULLEY, JR., Second Sergeant.
J. C. BARBER, Third Sergeant.
H. M. FOY, Fourth Sergeant.
JULIAN M. HOWARD, First Corporal.
W. W. WATT, Second Corporal.
J. G. ASHE, Third Corporal.

Company C.

S. W. ASBURY, Captain.
W. M. BOGART, First Lieutenant.
C. B. ROSS, Second Lieutenant.
E. P. BAILEY, First Sergeant.
E. E. LINCOLN, Second Sergeant.
G. W. FOUSHEE, Third Sergeant.
R. R. KING, Fourth Sergeant.
W. SHANNONHOUSE, First Corporal.
J. R. SECHREST, Second Corporal.
S. T. WHITE, Third Corporal.

Company E.

S. C. CORNWELL, Captain.
D. S. OWEN, First Lieutenant.
E. R. STAMPS, Second Lieutenant.
J. T. LAND, Third Lieutenant.
G. H. HODGES, First Sergeant.
R. P. REECE, Second Sergeant.
N. ADAMS, Third Sergeant.
W. W. RANKIN, Fourth Sergeant.
C. A. SEIFERT, First Corporal.
R. R. HOLT, Second Corporal.
S. D. WALL, Third Corporal.
S. N. KNOX, Fourth Corporal.

Company I.

- J. F. DIGGS, Captain.
- J. W. WHITE, First Lieutenant.
- E. H. RICKS, Second Lieutenant.
- W. F. KIRKPATRICK, Third Lieutenant.
- L. A. NEAL, First Sergeant.
- M. E. WEEKS, Second Sergeant.
- W. F. MORSON, Third Sergeant.
- W. W. FINLEY, Fourth Sergeant.
- L. M. HOFFMAN, First Corporal.
- O. L. BAGLEY, Second Corporal.
- J. D. SPINKS, Third Corporal.
- W. L. SMITH, Fourth Corporal.

GENERAL INFORMATION.

The North Carolina College of Agriculture and Mechanic Arts owes its existence to the combined liberality of the United States Government and the late R. S. Pullen, of Raleigh, together with the patriotic efforts of a few far-sighted men who saw that, in the industrial life of North Carolina, the time had come when trained and educated leaders were necessary. The first act of the General Assembly of this State in relation to the College was introduced in 1885, the bill which afterwards became a law having been introduced by A. Leazar, Esq. The Congress of the United States in 1862 passed a bill introduced by Senator Justin S. Morrill of Vermont, giving to each State public lands "for the endowment, support, and maintenance of at least one college, whose leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life."

The income from this grant, amounting to \$7,500 annually, was appropriated in 1887 by the Legislature of the State for the establishment and yearly maintenance of this College. Sufficient land for the College site and farm was donated by the late R. S. Pullen. The College was formally opened for students October 1, 1889, with one building and five teachers.

Additional funds were provided afterwards by the National Congress to aid in the support of the College and the State Agricultural Experiment Station, which is now a department of the College.

The College is beautifully located on the extension of Hillsboro street in the western suburbs of Raleigh, a mile and a quarter from the State Capitol. The site is suitable in all respects.

There is an abundant supply of water from twelve deep wells. The water is analyzed both chemically and bacteriologically at regular periods.

The College now owns six hundred acres of land and fifteen buildings, and its teaching force consists of thirty-one specialists. Its laboratories, drawing-rooms, and workshops are well equipped. Its library contains three thousand volumes, and its reading-room is well supplied with literary and technical journals and newspapers.

BUILDINGS.

The Main Building is of brick, with brownstone trimmings, and is seventy by sixty feet; part four stories in height and the remainder two. The lower floors contain the offices of the President and the Bursar; several recitation-rooms; chemical and physical laboratories, and the armory. The upper stories are occupied by students.

In this, as in other buildings, every precaution has been taken to secure good sanitation. The rooms are all well lighted, well ventilated, and conveniently arranged.

The Mechanical Engineering Building is a plain, substantial, two-story brick building, with large annex. It contains the laboratory, drawing-rooms and recitation-rooms, and shops of the department.

The Boiler-house is a single-story brick building, containing boilers, fire-pump, and the machinery connected with the steam-heating plant.

Primrose Hall is a two-story brick building, which has attached a fine range of glass structures. The lower, or basement floor, is occupied by the Horticultural laboratory and boiler-room. The upper floor contains a large lecture-room and Botanical laboratory. The plant-houses are five in number, and are immediately accessible from the lecture-rooms and laboratories.

The Dairy and the Barn are frame buildings of modern design, and carefully planned for the purposes to which they are devoted. The barn is fifty by seventy-two feet and three stories high; the dairy is twenty by forty feet and two stories high.

The Textile Building is a two-story brick building one hundred and twenty-five by seventy-five feet with a basement. Its construction is similar to a cotton-mill, being an illustration of standard construction in this class of buildings. The basement contains the dyeing department, the first floor the looms and warp preparation machinery, and the second floor the carding and spinning machinery.

Watauga Hall is a three-story brick building, trimmed with brownstone and containing sixty rooms for dormitories. There is also a large dormitory in the attic, and in the basement are bath-rooms, which are free for students' use.

Pullen Hall.—In honor of the late R. Stanhope Pullen, the greatest benefactor of the College, the large new building that will be finished in the spring of this year will be called Pullen Hall. The basement of this building will be used as a dining-room, and will seat five

hundred students. The second story will be used for library, reading-room, and lecture-rooms. The third story is to serve as the College auditorium. This room will be commodious, comfortable and well lighted.

The Infirmary is a two-story brick building, containing a sitting-room, seven bed-rooms, three bath-rooms, a kitchen, linen-room, doctor's office and medicine closet. The rooms are large, well ventilated, well lighted and heated with open fire-places. Each room opens upon a large, pleasant portico. The furnishing and equipment of the rooms are suitable to hospitals.

Dormitories.—Four two-story brick buildings are used exclusively for dormitories.

The College is supplied with a steam fire-pump, reservoir, hydrants, and fire hose to protect the buildings from burning.

The third and fourth dormitories, Primrose Hall and the green-houses attached are heated by hot water; the Textile Building is heated by the Startevant hot-air system, and the other College buildings are heated by the Warren-Webster vacuum system of steam-heating.

THE AGRICULTURAL EXPERIMENT STATION.

The North Carolina Agricultural Experiment Station is a department of the College. It was established originally as a division of the State Department of Agriculture, in accordance with an act of the General Assembly, ratified March 12, 1877. Its work was greatly promoted by Act of Congress of March 2, 1877, which made a liberal donation to each State for the purpose of investigations in agriculture and for publishing the same. The bill, which subsequently became a law, was introduced by Representative Wm. H. Hatch of Missouri.

The Director's office is in the Agricultural Building in Raleigh and the laboratories in the main building at the College. The experimental work in agriculture, horticulture, stock and poultry raising, dairying, plant diseases and chemistry is carried on in the laboratories and on the College and adjoining grounds.

The Station is always glad to welcome visitors, who can reach it by street-car, and will gladly be shown the work in progress. The Station conducts a large correspondence with farmers and others concerning agricultural matters. It is always glad to receive and answer questions.

Publications relating to general farming matters and embodying the results of the experiments are published and sent free to all citi-

zens of the State who request them. A request addressed to the Agricultural Experiment Station, Raleigh, N. C., will bring these publications or answers to letters.

THE PURPOSE OF THE COLLEGE.

The College is an institution where young men of character, energy, and ambition may fit themselves for useful and honorable work in any line of industry in which training and skill are requisite to success. It is intended to train farmers, mechanics, engineers, architects, draughtsmen, machinists, electricians, miners, metallurgists, chemists, dyers, mill-workers, manufacturers, stock-raisers, fruit-growers, truckers, and dairymen, by giving them not only a liberal but also a special education, with such manual and technical training as will qualify them for their future work.

It offers practical and technical education in Agriculture, Horticulture, Animal Industry, Civil Engineering, Mechanical Engineering, Electrical Engineering, Mining Engineering, Metallurgy, Chemistry, Dyeing, Textile Industry, and Architecture. It also offers practical training in Carpentry, Wood-turning, Blacksmithing, Machinists' work, Mill-work, Boiler-tending, Engine-tending, Dynamo-tending, and Road-building.

Although the leading purpose of the College is to furnish technical and practical instruction, yet other subjects essential to a liberal education are not omitted. Thorough instruction is given in English, Mathematics, History, Political Economy, Physics, Chemistry, Botany, Zoology, Physiology, and Geology.

The College is not a place for young men who desire merely a general education without manual or technical training; nor for lads lacking in physical development, mental capacity, or moral fibre; nor for those that are unable or unwilling to observe regularity, system, and order in their daily work.

PRIZES.

A first prize of ten dollars and a second prize of five dollars are awarded annually to the student in the Freshman Class who earns the largest and the next largest amount of money by agricultural labor on the College farm.

The Arthur H. Thomas Company of Philadelphia offers to the Biological Club as first and second prizes two "Aplanatic Triplet" hand magnifiers, to be awarded for the most deserving work in biology.

The Vermont Farm Machine Co., of Bellow's Falls, Vt., offers a prize of their No. 7 U. S. Separator to the student preparing the best essay on the "Making of a Dairy Farm." The value of this prize is one hundred dollars.

P. M. Sharples, West Chester, Pa., offers a prize of one-half the list price of a Separator to the student preparing the best essay on the subject, "The Middle South as a Dairy Section." The value of this prize is from \$50 to \$250.

The Caraleigh Phosphate and Fertilizer Company offers a prize of a ton of high-grade fertilizer to the student preparing the best essay on "Soil Fertilization." The value of the prize is \$35.

Mr. Grimes Cowper, Raleigh, offers a prize of a pure bred registered Jersey Bull to the student preparing the best essay on "The Conformation of the Dairy Sire and Cow." The value of this prize is \$50.

The MacMillan Co., New York, offers a prize of a set of Rural Science books, complete, to the student preparing the best essay on "The Farmer and his Library." The value of this prize is \$25.

Charles Scribner's Sons, New York, offer a prize of a set of books on Agriculture to the student preparing the best essay on the subject, "The Farmer should be a Student Always." The value of this prize is \$5.

The Zenner Disinfectant Co., Detroit, Mich., offers a silver medal to the student making the best report on the Live Stock Exhibit at the State Fair. The value of this medal is \$25.

The North Carolina State Fair Association offers a prize of \$5 to the student preparing the best essay on the Live Stock Exhibit at the State Fair.

DISCIPLINE.

The College is under military discipline and the students are regularly organized into a battalion. A printed copy of rules and regulations is furnished each student on admission, and he is expected to conform to the same during his connection with the institution. The discipline is intended to secure studious and economical habits, with punctuality, system, and order in the performance of all duties. A durable uniform, which is required to be worn on all occasions, prevents extravagance and folly in dress; rooms plainly furnished and a mess-hall economically managed by the College prevent extravagance in living; regular study hours, day and night, with proper restrictions as to visiting Raleigh, check, or at least minimize, tendencies to idleness, vice, and rowdyism.

Regular reports of scholarship and conduct are made to parents and guardians three times a year. Special reports are made whenever necessary. Students who are persistently neglectful of duty, or manifestly unable to do the work required, will be discharged at any time. The Faculty will require any student to withdraw whenever it is plain that his stay in the institution is not profitable to himself or to the College. Every effort is made to develop strong, intelligent, high-toned men; and proper patience, forbearance, and sympathy are used in this great work; but the College is in no sense a reform-school, and its work must not be hindered by the presence of young men who are grossly vicious, idle or incompetent.

LIBRARY AND READING-ROOMS.

The College Library and Reading-rooms are on the second story of the Main Building. The reading-rooms are supplied regularly with about one hundred and twenty-five magazines and journals of various kinds, and yearly additions are being made to this number. The library contains about thirty-five hundred volumes. There are also reference libraries in the different departments. The library and reading-rooms are kept open from 8 A. M. to 6 P. M. The Librarian is always present to assist students in finding desired information.

LIBRARY FACILITIES.

The Olivia Raney Library in Raleigh, containing now about seven thousand volumes, is free to the students and they have the privilege of borrowing books from it. Students also have the privilege of consulting books in the State Library.

STATE MUSEUM.

Students have free access to the large collections of the State Museum. These collections furnish most excellent opportunities for studies in Geology, Mineralogy, Mining, Forestry, and Natural History.

COLLEGE SOCIETIES.

Such college organizations are encouraged as tend to the formation of good character, the development of manly physical vigor, and the promotion of literary, scientific, and technical research and training.

The Young Men's Christian Association, containing in its membership representatives of all the Christian denominations, meets regularly each Sabbath for conference, Bible study and worship, and exerts a wholesome influence throughout the College.

Members of the Association will meet and welcome new students at the depot.

The Pullen, Leazar and Tenerian Literary Societies afford excellent opportunities for practice in declamation, debate, composition, and parliamentary law, as well as opportunities for social pleasure and recreation.

The Biological Club meets semi-monthly for the discussion of biological subjects in their relation to practical agriculture. Students here present results of their own investigations and observations and reviews of the more important current publications, particularly those from the United States Department of Agriculture.

The Liebig Chemical Society meets fortnightly for the discussion of chemical subjects and for review of the current chemical literature with which the College is well supplied.

Electrical Engineering Society.—The members of the Society meet once a week in the physical laboratory. To review the articles on electrical engineering in the current journals is one of the chief objects of the Society. The Society has at its disposal the best periodicals, most of which are furnished free of charge by the publishers.

Farmers' Institute.—The students in the Winter Course in Dairying and Agriculture meet every Wednesday night during the winter term for a discussion of practical agricultural problems. The meetings are conducted in the manner of a Farmers' Institute and give training in conducting farmers' meetings, *ex tempore* speaking on agricultural questions, and the writing and reading of reports on various farm operations.

The Rural Science Club meets semi-monthly for the discussion of agricultural subjects, review of current agricultural publications, and reports on personal experiments and the work of the College farm and Experiment Station.

The Athletic Association is intended to promote physical health and manly spirit through athletic sports. Under the direction of the Athletic Committee of the Faculty, it promotes practice in base-ball, foot-ball, etc. The College is provided with extensive grounds, which furnish ample facilities for military drill and athletic sports.

The Dramatic Club presents at least one play each year to the students and people of Raleigh. The plays selected are of high literary character, and offer full opportunities for artistic and clever acting.

The Alumni Association meets on Monday of each year preceding Commencement day, transacts its annual business, hears the Alumni oration and attends the annual Alumni banquet. This Association has established a Student Aid Fund to assist needy students in obtaining their education at the College by making them small loans.

REQUISITES FOR ADMISSION.

Applicants for admission must be at least sixteen years of age and must bring certificates of good moral character from the school last attended.

To the Four Year Courses.—Applicants for admission to the Freshman Class of all four year courses will be examined on the following subjects: Arithmetic (complete), Algebra (through simple equations), English Grammar, Analysis and Composition, and American History. No student will be admitted to the Freshman Class whose examination papers are seriously faulty in spelling, grammar, punctuation or division into paragraphs.

To the Two Year Courses.—Applicants for admission to the two year course in Textile Industry will take the same examinations as those required of candidates for admission to the Freshman Class. Applicants for admission to the two year courses in Agriculture and in Mechanic Arts will be examined on Arithmetic (through decimal fractions), English Grammar and Composition, and American History.

Applicants for admission to the two year course in Agriculture, if they are twenty years of age, or over, will not be required to take the entrance examinations.

To the Winter Courses.—No entrance examination is required of candidates for admission to the winter courses. No one under eighteen years of age will be admitted to a winter course.

TIME OF EXAMINATIONS.

Entrance examinations will be held by the County Superintendents of Instruction in each court-house in the State at 10 o'clock A. M. the second Thursday in July of each year. The date for 1903 is July 9th. These examinations will save the expense of a trip to Raleigh in case the candidate should fail, or if there should not be room enough for him in the College. Entrance examinations will be held also at the College on the first Wednesday in September of each year. The date for 1903 is September 2d, 9 o'clock A. M.

ADMISSION WITHOUT EXAMINATION.

The following persons will be admitted without examination :

1. Applicants for admission to winter courses over eighteen years of age.
2. Applicants for admission to the two year course in Agriculture, if they are over twenty years of age.
3. School-teachers holding teachers' certificates.
4. Graduates of those High Schools and Academies whose certificates are accepted by the Faculty of this College.

SESSION.

The College session lasts nine months and opens annually the first Wednesday in September and closes the last Wednesday in May, with a vacation of about ten days at Christmas.

EXPENSES.

The annual expenses are as follows :

Tuition, \$20; Lodging, \$10; Fuel and Lights, \$12.50; Furniture, \$2; Library, \$1; Incidental, \$1; Medical Fee and Medicine, \$4.50; Board, \$72. Payments are made monthly in advance. A fee of \$1 is charged all students reporting for registration after the regular day appointed for that purpose—said fee being placed to the credit of the student loan fund.

Students taking shop-work are required to pay a fee of \$1 at the beginning of each year for material and the use of tools. A similar fee of \$1 is collected from students taking drawing.

Students taking chemical laboratory instruction are required to make a deposit at the beginning of the year, to cover breakages, as follows: Sophomores, \$3; Juniors and Seniors, \$6; any unused portion of this will be returned at the end of the year. All students taking work in biological, physical, or electrical laboratory, will pay a fee of \$1.

Students taking instruction in the dyeing laboratory are required to make a deposit at the beginning of the year to cover breakages, as follows: Juniors, \$3; Seniors, \$6.

Textile students will make a deposit of \$5 at the beginning of the year, to cover cost of designing supplies, tools, etc., any unused portion of which will be returned at the end of the year.

There is no deduction for less time than one month, except for board. The College uniform costs, including cap, about \$13.85, the

uniform overcoat \$10 to \$13, one pair overshoes 75 cents to \$1, and must be paid for when received. A cheap set of overalls should be purchased for shop and field-work. *Each student must supply four sheets, two pillow-cases, four towels and two counterpanes, which he can bring from home, and must purchase his own books, stationery, drawing instruments and materials, which he can obtain at the College.* Students who are willing to work may reduce their total annual expenses to one hundred dollars, or even less.

UNIFORM.

The College uniform must be worn by all students excepting winter course students. It must be purchased at the College from the contractor. The uniform is of a strong gray cloth, and with care will last a year. New students are especially cautioned not to bring with them to the College a supply of citizens' clothing, as the uniform must be worn on all occasions.

FREE TUITION.

Scholarships, one hundred and twenty in number, conferring free tuition and lodging, are given to needy boys of talent and character. As far as possible, these scholarships are distributed among the counties of the State. Appointments are made only by the President of the College upon written recommendation of members of the Legislature. The scholarships are not intended for people who have property. Certificates of inability to pay must be made by the applicant and endorsed by the person recommending him. A scholarship once bestowed will be retained by the holder until graduation, unless he should prove neglectful of his studies or guilty of serious misconduct.

One hundred and twenty scholarships have been established by the Board of Agriculture for students in the four year and two year courses in Agriculture. These scholarships cover tuition, and are available for the time the student is in college. They also cover room rent if the College dormitories are not otherwise occupied.

SELF-HELP.

Many students pay their own expenses, either wholly or partly, by doing various kinds of work. There is regular employment for a limited number, enabling them to earn from \$4 to \$10 a month. There

is also occasional employment, paying from \$2.50 to \$5 a month. New students should not rely upon securing employment the first four months. Except when arrangements have been previously made with the College authorities, young men in needy circumstances are not advised to come to the College, unless during the year they can have at their command at least one hundred dollars.

STUDENT LOAN FUNDS.

The Alumni Association of the College has established a small fund to be lent to needy students of talent and character. The loans are made at six per cent., and good security is required. Sufficient time is given for repayment to enable the student to earn the money himself. The amount lent to each student is limited. The purpose is to help young men who are willing to help themselves and who cannot find sufficient employment while in college to meet all their necessary expenses.

Contributions are solicited for this fund from students, *Alumni* and friends of education generally. The fund is administered by the College Bursar, under the direction of the President. At present the fund amounts to four hundred and eighty-six dollars.

The sum of sixty-nine dollars and fifty-one cents has been contributed by friends as a memorial to Mrs. S. C. Carroll, for many years matron of the College. This fund is also loaned to needy students.

BOARD AND LODGING.

All students are expected to board in the College mess-hall and room in the College dormitories. An abundant supply of plain, nourishing food, with as large variety as possible, is furnished absolutely at cost. The charge at present is \$8 per month, payable in advance, with reduction in case of withdrawal during the month.

Rooms in the College dormitories are supplied with electric lights, steam heat and all necessary furniture, except sheets, pillow-cases, bed-spreads and towels, which each student must furnish for himself. The charge for lodging is by the month, and there is no reduction in case of withdrawal. Lodging in the College buildings will not be supplied to special students, who are permitted, however, to board in the mess-hall, if they so desire.

Any student over twenty-one years of age is permitted to room and board outside the College.

CARE OF THE SICK.

Every effort is made to protect the health of young men in the College. Regular inspections of the entire institution are made once a year, or oftener, by the State Board of Health. Similar inspections, at frequent intervals, are made by the College physician. There is an abundant supply of pure water from twelve deep wells. Each cadet has a regular routine of daily life, including abundant physical exercise in the shops and on the drill grounds.

In case of sickness a student is taken immediately to the College Infirmary, where he receives medical attention and careful nursing.

The College physician visits the Infirmary daily at 10 o'clock, and in cases of serious illness, as frequently as may be required.

A trained nurse has charge of the Infirmary at all times.

COURSES OF INSTRUCTION.

The College offers the following Courses of Instruction :

I. Four Year Courses leading to degrees in :

- 1st. **Agriculture** (including Agriculture, Horticulture, Veterinary Science, Biology, and Agricultural Chemistry).
- 2d. **Engineering** (including Civil Engineering, Mechanical Engineering, Electrical Engineering, and Mining Engineering).
- 3d. **Industrial Chemistry** (including Metallurgy and Dyeing)
- 4th. **Textile Industry** or Cotton Manufacturing.

These courses offer a combination of practical and theoretical work, about half of the time being devoted to lectures and recitations and the other half to work in the shops, laboratories, drawing-rooms, green-houses, dairies, fields, and mills. They are intended to furnish both technical and liberal education. The Bachelor's degree is conferred upon any one who completes satisfactorily a Four Year Course.

II. Short Courses of two years (not leading to a degree) in Agriculture, in Textile Industry, in the Mechanic Arts (including Carpentry, Wood-turning, Blacksmithing, Machinist's Work and Drawing), and in Building and Contracting.

The Short Courses include nearly all the practical work of the Four Year Courses, with less theoretical instruction. They are intended for students who desire chiefly manual training or for those who are unable to complete the Four Year Courses.

III. Winter Courses in Agriculture and Dairying and in Road-building, beginning at the opening of College in January and extending to the close of the term, ending in March.

IV. Normal Courses for the training of teachers along industrial lines.

V. The Summer School.

VI. Graduate Courses, extending over two years and leading to advanced degrees, are intended for students who have completed the Four Year Courses and who desire further instruction and training along special lines.

AGRICULTURAL COURSES.

I. The Four Year Course in Agriculture.

Ia. The Two Year Course in Agriculture.

Ib. The Winter Course in Agriculture and Dairying.

Aim and Scope.—The aim of the Agricultural Courses is to train young men in both the science and the practice of their profession. It is believed that every young man preparing to farm needs a double education: one that is practical, to fit him for his profession; another that is cultural, to fit him to live.

In order to meet the necessities of all young men who desire instruction in Agriculture, the College offers four distinct courses:

The four year course aims to give a training that is thoroughly practical as well as scientific in Agriculture and its various branches, such as Stock-raising, Dairying, and Horticulture. The strictly technical portion constitutes about one-third of the work. Of the remaining two-thirds of the course more than one-half is prescribed in the sciences. This is done for the training and information they give and to prepare for the technical work of the course. Because of this, and because the subject-matter and the methods of the technical portion lie so fully within the domains of science, the course is essentially scientific rather than literary. Yet the College is mindful of the fundamental character of English Literature and of Political Economy as training studies, and reasonable attention to these studies is required.

The two year course is designed to meet the needs of those who are unable to take the longer course. It is especially devoted to the practical study of Agriculture and Horticulture, and their various branches, and the natural sciences which are so closely related to farming.

The ten weeks' winter course in Agriculture is established to meet the needs of those who can spend only the winter at the College. The important and practical subjects of Agriculture and Horticulture and Stock-raising receive principal attention.

The ten weeks' dairy course is a course in practical butter-making in accordance with the most approved methods of the modern creamery.

Methods of Instruction.—Instruction is by laboratory work, supplemented by text-books, lectures, and reference readings, which are almost constantly assigned from standard volumes and periodicals.

The equipment for the technical work of the course is rapidly increasing. The Department of Agriculture is fitting up laboratories for investigation in Soil Physics and in the mechanical analysis of soils. The dairy department is equipped with a modern creamery for pasteurizing, separating, creaming and churning, and for investigation in dairy bacteriology.

The department makes free use of the fields, orchards, and gardens, in which the Agricultural Experiment Station conducts experiments in methods of culture, in effects of several practices upon yield and upon fertility, in varieties of fruit, of vegetables, and of forage crops. The methods employed and the results obtained are freely used for instruction.

In work other than purely technical the agricultural students meet the same instructors and enjoy the same privileges as other students of the College. In all departments the laboratory method is freely employed. The student uses apparatus with his own hands and consults the literature of the subject at every step.

Scholarships in Agriculture.—One hundred and twenty scholarships have been established by the Board of Agriculture for students in the four year and the two year courses in Agriculture. These scholarships cover tuition (and room rent in the College dormitories if the College can furnish rooms), and are available for the time the student is in college.

Self-support while a Student.—The Board of Agriculture, in the interest of young men who are unable to meet necessary college expenses, has appropriated \$2,000 annually for student labor. This generosity on the part of the Board enables every student to pay a good part of his college expenses; some are able to meet the entire expense this way. This sum appropriated is intended solely to pay for farm work. The work is precisely the sort of work that is done on the farm—plowing, hauling, tile-laying, feeding beef cattle, feeding dairy cattle, feeding and grooming horses, running ditches and terraces, repairing machinery and tools, harvesting crops, the care of hogs, poultry, etc.

This feature in the courses of Agriculture is helpful not only in defraying college expenses, but serves as a training and education as well.

Requisites for Admission.—Applicants for admission to the four year course in Agriculture must be at least sixteen years of age. They are examined in the following subjects: Arithmetic (complete), Algebra (through simple equations), English Grammar, and American History.

For the two year course in Agriculture no entrance examinations are required if the applicant is at least twenty years old. Applicants not twenty years old desiring to enter the two year course will stand an examination in Arithmetic (through decimal fractions) English Grammar and Composition, and American History.

For the winter courses in Agriculture and Dairying no entrance examination is required, but applicants must be over eighteen years of age.

I. Four Year Course in Agriculture, leading to the Degree of Bachelor of Agriculture.

WINTER COURSES IN AGRICULTURE AND DAIRYING.

General Statement.—The Winter Course in Dairying and the Winter Course in Agriculture are designed to meet the wants of young men who are ambitious to excel in their chosen vocation of farming and who feel the need of more and better preparation before taking up their life work. The subjects presented in the two courses are those about which every young farmer should have definite and clear knowledge. In their treatment the topics are handled in such a way as to make the information to the student useful in the highest possible degree.

There is no longer any question concerning the value of advanced, definite knowledge concerning agriculture to those who follow farming; education and training pay on the farm as they do elsewhere in life.

The expenses of the course are so little, and the good to be derived so great, no young man in North Carolina can afford to miss the opportunity of getting this training so necessary in his work. The money necessary to meet the expenses for a whole term's instruction can be earned in a month or two before attending. Therefore no young man, even though he possess but a few dollars, can afford to miss the opportunity for training in his work.

The studies offered are dairying, stock-raising, creamery practice, stock-feeding, diseases of farm animals, dairy-farming, breeding farm animals, entomology, dairy chemistry, farm economics, and book-keeping. The class-room work is supplemented by practice in the creamery, barn, greenhouse, and work-shop.

Equipment.—The work in dairying, which includes butter-making, milk-testing, handling cream separators, pasteurizing cream and milk, and dairy bacteriology, is given in the Dairy Building. The building is equipped with separators, milk-testers, pasteurizer, and all tools required in making butter and preparing milk or cream for the city markets.

Requirements for Admission.—No entrance examination is required, but the students taking either the Dairy or Winter Course must be at least eighteen years of age and should have a common school education.

Expenses—College Dues.—Each student is required to pay a laboratory fee of five dollars. Tuition and instruction are entirely free.

Other Expenses.—Books and note paper will cost from two to three dollars, and two white duck suits to wear in the dairy laboratory will cost one dollar each. The suits, however, are not required. Board and room may be secured for \$2.50 per week. The total expenses of the whole ten weeks need not exceed thirty dollars.

Ib. The Winter Course in Agriculture and Dairying.

Butter-making.—This course includes all practical operations of creamery management. The student works with the guidance and under the direction of the Instructor at the same operations of butter-making, or pasteurizing, or milk-testing, until proficiency is obtained. He is required to follow the milk from the time it enters the laboratory and creamery until the product leaves it, and to determine the points in processes where losses occur and reasons why they occur. Six periods. Mr. KENDALL.

Milk and Butter Production.—This course consists of lectures and recitations on the methods of taking care of milk and the manufacturing of it into other products, also lectures upon construction, equipment and operation of creameries, dairies, and milk depots. Each student is required to draw a plan of a farm dairy and prepare an estimate for equipment of same. Two periods. Professor BURKETT and Mr. KENDALL.

Feeds and Feeding and Stock-raising.—This subject consists of an elementary study of the composition of foods; the constituents of feeding, amount, combination and form necessary to give best results with various kinds of live stock.

The student is required to calculate digestibilities and nutritive ratios and to arrange therefrom proper feeding rations. Two periods. Professor BURKETT.

Dairy Farming.—Lectures are given under this subject upon the history, adaption, care and management of the different breeds of dairy cattle. Dairy animals are studied by the score card, in accordance with the practice of judging animals for dairy purposes.

Instruction will also be given upon the character of food-stuffs, the relation of food to the animal, and kind and quality of food for the best milk production. Two periods. Professor BURKETT.

Diseases of Live Stock.—The lectures on this subject consist of Elementary Veterinary Anatomy and Physiology with special reference to the digestive and reproductive organs and the most common diseases and their treatment. Four periods. Professor BUTLER.

Soil Study.—Lectures and recitations upon composition, formation, kinds and physical properties of soil and their improvement by cultivation, natural and artificial fertilizers, drainage, etc.

The work in class-room is supplemented by work in the field and soil physics laboratory. One period. Assistant Professor McCLELLAND.

Farm Crops.—In this subject is included rotation of crops, green manuring, and a critical study of corn and cotton; judging of corn; condition of germination and growth; and improvement by selection and breeding. One period. Assistant Professor McCLELLAND.

Soils and Fertilizers.—Lectures on fertilizers and fertilizing materials and on the typical classes of North Carolina soils. Two periods, five weeks. Director KILGORE.

Farm Chemistry.—Lectures on air, water, the chemistry of plant growth and plant nutrition, and the composition of milk and its products. Two periods, five weeks. Doctor FRAPS.

Plants.—This course treats of plants in general, embracing such subjects as plant breeding, seed selection, seed testing, plant propagation and nutrition, classification, plant disease and its prevention, and bacteria and fungi in their relation to farm produce, treating of both the beneficial bacteria of farm operations and the injurious bacteria that produce disease, etc. Two periods. Doctor STEVENS.

Entomology.—This is a short course in which the more important noxious insects are studied, with special reference to methods of preventing their injuries. The various insecticides and methods of spraying are also included in this course. Two periods. Mr. SHERMAN.

Book-keeping.—This subject consists of the practical study of farm accounts, supplemented by numerous original examples and sets for practice. One period. Professor HILL.

Farm Economics.—This is an elementary course, dealing with production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. One period. President WINSTON.

AGRICULTURE.

Equipment.

The College possesses the following equipment for instruction in Agriculture. The farm includes six hundred acres, with two hundred and fifty acres under cultivation; a large three-story basement barn, 50 by 72 feet. The first floor is occupied by farm implements and machinery; the second story is occupied by horses, grain bins, cutting implements, etc.; the third story, by hay, which is elevated by a Ricker and Montgomery hay carrier. Just outside the barn are two 70-ton silos. These are connected with a No. 18 Ohio feed and ensilage cutter. Power for cutting is supplied by an eight-horse power Skinner engine. The farm is supplied with all necessary machinery for the most successful and up-to-date farming.

The Dairy Building contains three rooms and cellar, and is supplied with DeLaval, Sharpless, United States, Empire, National, and Reid Separators, Babcock Testers, various kinds and makes of churns, butter-workers, etc.

The live stock consists of necessary horses and mules, a herd of dairy cattle, a herd of Aberdeen-Angus beef cattle, and a herd of swine. The Poland China and Berkshire swine are pure bred, and from high-class specimens. Breeding-stock is sold as a part of the farm products.

The poultry-yard is divided into sixteen lots. The buildings consist of incubator cellar, brooder-house, and hen-houses. Several different incubators are used. The poultry-yards contain the following breeds: White Wyandotte, White and Barred Plymouth Rock, Black Minorca, Brown Leghorn, Light Brahmas, and Pekin Ducks.

Subjects of Instruction.

1. Breeds of Live Stock.—Lectures and recitations upon the history, characteristics, care and management, and adaption of the different breeds of live stock. Practical exercises are given in scoring and judging the various kinds of live stock with the score card. Three periods, first term. For Sophomores and second-year students. Professor BURKETT.

2. Principles of Breeding.—Lectures and recitations upon the laws of inheritance, and the principles and phenomena of evolution as applicable to the improvement of animals or plants. The aim is to bring every known principle of reproduction to the assistance of the breeder's art. Practical exercise in scoring and judging live stock, and in writing and tracing pedigrees. Three periods, second term. For Sophomores and second-year students. Professor BURKETT.

3. Stock-feeding and Hygiene.—Lectures and exercises upon the laws of nutrition, and the character of food-stuffs, and the kind and quality of foods to produce certain results. Practical exercises in calculating digestibility, nutritive ratios, and feeding standards. Three periods, third term. For Sophomores and second-year students. Professor BURKETT.

4. Farm Equipment.—Lectures and recitations upon selecting, planning, and equipping farms; planning and erecting farm buildings; farm vehicles and machinery; power, water, and drainage; practical exercise in drawing plans of farms and farm buildings; levelling and laying drains, dynamometer tests of wagons and farm implements, etc. Four hours, first term. For Juniors and second-year students. Assistant Professor McCLELLAND.

5. Soils.—Lectures and recitations upon composition, formation, kinds, and physical properties of soils and their improvement by cultivation, natural and artificial fertilizers, drainage and irrigation. Practical exercises in testing physical properties of several soils, determining the relation of soils to heat, moisture, air, and fertilizers, and mechanical analysis. Four hours, second term. For Juniors and second-year students. Assistant Professor McCLELLAND.

6. Farm Crops.—Lectures and recitations upon the history, production, harvesting and marketing of farm crops. Practical exercise with growing and dried specimens of farm crops, including grasses, clovers, and other forage crops. Four hours, third term. For Juniors and second-year students. Assistant Professor McCLELLAND.

7. Farm Machinery.—Lectures and laboratory work on the tools and machinery of the farm, in reference to their design, construction, draft, durability, and care. The student is required to set up and test the various machines used on the farm. Three hours, third term. For Juniors and second-year students. Assistant Professor McCLELLAND.

8. Animal Husbandry.—A critical study of the horse; his breeding and management; gaits; practice in expert judging of horses. Two periods, first term. For Seniors. Professor BURKETT.

9. Animal Husbandry.—A critical study of beef and dairy cattle; the breeding, feeding, and management, and practice in expert judging of cattle. Two periods, second term. For Seniors. Professor BURKETT.

10. Animal Husbandry.—A critical study of sheep and swine in reference to type, wool or mutton; pork or bacon. The breeding, feeding, and management of sheep and swine, and practical exercise in expert judging sheep and swine. Two periods, third term. For Seniors. Professor BURKETT.

11. Agronomy.—A critical study of the farm crops, corn and cotton; judging corn; conditions of germination and growth, and improvement by selection and breeding. Three periods, first term. For Seniors. Assistant Professor McCLELLAND.

12. Special Crops.—Special crops will be studied by the student in the laboratory and field. Three periods, second term. For Seniors. Assistant Professor McCLELLAND.

13. Soil Physics and Management.—This course is designed for advanced work in the study of soils, both in the laboratory and the field. Three periods, third term. For Seniors. Assistant Professor McCLELLAND.

14. Dairying.—Practice and occasional lectures. The course consists in general management of modern dairying, the methods of milk analysis, the bacteriology of milk, the use of separators, the testing of milk, ripening of cream, churning, working, packing and scoring butter. Four periods, third term. For Freshmen. Four periods, first term. For first-year students. Professor BURKETT and Mr. KENDALL.

15. Dairy Bacteriology.—A laboratory course in the study of bacteria in its relation to creamery, butter-making, and cheese production. Three periods, first term. For Seniors. Mr. KENDALL.

16. Experimental Dairying.—Laboratory practice in making butter and cheese. Three periods, second term. For Seniors. Mr. KENDALL.

17. Dairy Seminary.—Laboratory practice in making butter and cheese of special commercial importance. Three periods, third term. For Seniors. Mr. KENDALL.

18. History of Agriculture and Rural Economics.—Lectures upon the history of Agriculture; present agricultural methods in various counties, cost and relation, profits of various farm operators and systems. Three periods, third term. For Seniors. Professor BURKETT.

VETERINARY SCIENCE.

The object of the teaching in this department is not to turn out educated veterinarians, but to more thoroughly equip the agricultural student for the breeding and management of live stock. In addition to the work required of all students in the Agricultural courses, as outlined below, the Senior students in the four year course in Agriculture may elect to do three hours a week during the entire year. When so elected, this work will be of a more advanced nature, but supplementary to that required of all students in the Agricultural courses.

19. Veterinary Anatomy.—Lectures, illustrated by charts and sketches and, when practicable, by dissections.

Special attention will be given to the organs of digestion and locomotion and such other parts as are of particular interest to the stock farmer. Four periods, first term. Required of Juniors and elective for second-year students. Professor BUTLER.

20. Veterinary Medicine.—Lectures on the actions, uses, and doses of the most common veterinary medicines, and the nature and cause of disease, with special reference to its prevention. Four periods, second term. Required of Juniors and elective for second-year students. Professor BUTLER.

21. Veterinary Practice.—Lectures on the most common diseases and injuries of domestic animals, with appropriate treatment for the same. When practicable, these lectures will be illustrated by clinics, which will enable the student to become more familiar with the different diseases and to perform minor surgical operations under

the direction of the Instructor. Four periods, third term. Required of Juniors and elective for second-year students. Professor BUTLER.

22. Veterinary Medicine.—Advanced course in veterinary medicine and surgery with clinical practice. Three periods. For Seniors. Professor BUTLER.

HORTICULTURE.

Equipment.

Twenty-three acres of land comprise the Horticultural Experiment farm. There is ample equipment of barns, silos, stock, and machinery. There are five communicating greenhouses, separated by glass partitions so that different night temperatures can be maintained to suit the various purposes to which the houses are devoted. In addition, there is one glass structure, without heat, for the culture of foreign grapes. There is kept a general collection of plants for botanical study and for practice in Floriculture, and in two of the houses winter forcing of vegetables and fruits is carried on, in order that the students may have practice in a line of work that is rapidly assuming commercial importance in the State. The building and greenhouses are heated in the most complete manner by hot water.

The entire basement of Primrose Hall is used as a Horticultural Laboratory, where practice in grafting, potting, and cross fertilization of plants is constantly going on.

Subjects of Instruction.

23. Elementary Horticulture.—Four periods, first term. Required of Freshmen. Four periods, second term. Required of first-year students. Assistant Professor McCLELLAND.

24. Pomology.—Four periods, second term. Required of Freshmen. Four periods, third term. Required of first-year students. Assistant Professor McCLELLAND.

25. Market Gardening.—Lectures on the theory and practice of growing vegetables in open ground and under glass commercially. Three periods, first term. Elective for Seniors and second-year students.

26. Forestry.—Lectures on forest influences and methods of forest management, timbers, and forest products. Three periods, second term. Elective for Seniors and second-year students.

27. Landscape Gardening.—Lectures on the history of the garden art and styles of ornamental gardening, planning of country places

and farm-houses, and improvement of grounds in general. Three periods, third term. For Seniors and second-year students.

BIOLOGY.

Equipment.

The biological laboratory is equipped with the books, specimens, sterilizers, microscopes, microtomes, and small utensils needed in the prosecution of the work. The excellent herbarium has been mounted and is now accessible for class use. There is an extensive collection of seeds of both weeds and cultivated plants, and most of the important plant diseases are represented by herbarium and alcoholic specimens. The greenhouse is of great utility as a source of material, for seed-testing and for conducting physiological experiments.

Subjects of Instruction.

28. Elementary Botany.—Weekly lectures accompanied by laboratory work and reference-reading regarding the algae, fungi, ferns, and seed plants. Morphology is emphasized, and the broad principles of nutrition, reproduction, sex, adaptation, and evolution are illustrated. Particular consideration is given to the fungi and seed plants. The student's knowledge is made his own through field-work and independent investigation. Three periods, first and second terms. Required of Freshmen and first-year students. Professor STEVENS.

29. Systematic Botany and Ecology.—The student becomes acquainted with the principal orders and families of plants of North Carolina as well as with the general problems of plant classification. More attention is given to the grouping of plants into societies and to the study of plant variation and adaptation than to mere collecting and classifying. The principles of plant breeding, crossing, pollination, budding, and grafting are taught. Three periods, third term. Required of Freshmen and first-year students. Professor STEVENS.

30. Plant Diseases.—Lectures and laboratory study of the principal types of plant diseases produced by bacteria, fungi or physiological derangement, with specific consideration of the methods of treatment. This course emphasizes the principles of plant disease and places the student in a position to employ prophylactic and remedial methods rationally. Three periods, first term. Required of Sophomores and second-year students. Professor STEVENS.

31. Physiological Botany.—Lectures, demonstrations and laboratory work treating of plant nutrition, reproduction, and growth. Especial attention is given to phases of the subject bearing most directly upon plant culture. Three periods, third term. Required of Sophomores and second-year students. Professor STEVENS.

32. Economic Botany.—A study of the more important groups of economic plants, weeds and medicinal plants, seed-testing, nitrification, and nitrogen fixation, origin of cultivated plants and of bacteria and fungi in their relation to Agriculture, etc. Two periods, third term. Required of Seniors. Professor STEVENS.

33. Bacteriology.—Lectures and laboratory work on the nature, physiology, morphology, and economy of bacteria, with especial reference to home sanitation, disinfection, and to the relation of bacteria to disease in plants and animals. The student becomes familiar in the laboratory with methods of culture and investigation in bacteriology. Three periods, first and second terms. Required of Seniors. Professor STEVENS.

34. Plant Disease (Advanced).—Methods of culture and investigation of plant disease. This course is intended to prepare the student for original investigation in plant diseases. Two periods, first term. Elective for Seniors. Professor STEVENS.

35. Zoology.—The fundamental principles of animal life, together with a knowledge of the structure and classification of animals, are developed by lectures, laboratory work, and reading. Two terms are devoted to vertebrates and invertebrates exclusive of insects. This course is intended to present a general view of the animal kingdom and to lay a foundation for the more special subjects that are to follow. Three periods, first and third terms. Required of Freshmen and second-year students. Professor STEVENS.

36. Human Physiology.—Lectures and laboratory work, supplemented by home work and observation, cover the more important features of human physiology and hygiene. Three hours, second term. Required of Sophomores and second-year students. Professor STEVENS.

37. Entomology.—Elements of insect structure and classification. Injurious insects and remedies; *a*, of orchards; *b*, of small fruits; *c*, of truck and garden crops; *d*, of cotton, corn, tobacco, grains, and grasses; *e*, of forest, shade, and ornamental plants; *f*, of barn, mill and household. Three periods, second term. Required of Freshmen. Mr. SHERMAN.

38. Entomology (Advanced).—Systematic study of orders and families of insects with special reference to structure, classification, life history and habits. Lectures and laboratory practice. Two periods, second term. For Seniors. Mr. SHERMAN.

CHEMISTRY.*

39. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated with experiments and the exhibition of specimens. Three periods. Required of Sophomores. Elective for second-year students. Professor WITHERS and Doctor FRAPS.

40. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Laboratory Guide*. The student performs under the eye of the Instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Elective for second-year students. Mr. SYME and Mr. FRENCH.

41. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Two periods. Required of Juniors. Professor WITHERS.

42. Analytical Methods.—A discussion of methods and principles involved in qualitative and quantitative analysis. One period. Elective for Seniors. Doctor FRAPS.

43. Analytical Chemistry (Introductory).—Laboratory work. Caldwell's *Chemical Analysis*. The student is taught to detect the presence of the more common elements in unknown substances. He is then given practice in introductory gravimetric and volumetric quantitative work. Six periods, first term. Elective for Seniors. Professor WITHERS and Mr. SYME.

44. Agricultural Analysis.—Laboratory work. The work of the student in quantitative analysis is continued, embracing the analysis of those substances more closely related to his work, as fertilizers, feeding-stuffs, milk, butter, etc. Six periods, second and third terms. Elective for Seniors. Professor WITHERS and Mr. SYME.

45. Agricultural Chemistry.—A study of the facts obtained by the application of chemistry and chemical methods of investigation

*For further information, see courses in Industrial Chemistry.

to agriculture. The laws of plant and animal nutrition, the economical feeding of plants and animals, and the maintenance of the fertility of the soil are considered from the chemical standpoint. Two periods. Required of Juniors. Elective for second-year students. DOCTOR FRAPS.

46. Agricultural Chemistry (Elementary).—Two periods. Required of first-year students. PROFESSOR WITHERS.

PHYSICS.*

47. Elementary Physics.—Properties of matter; fundamental units. British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Sophomores. PROFESSOR WEIHE.

DRAWING.†

48. Free-hand Drawing.—Work in the use of the pencil; isometric sketches; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of Sophomores. MR. WEBER.

49. Elementary Mechanical Drawing.—Use of instruments; geometric drawing; isometric drawing; elementary projections; drawings made to scale from working sketches of pieces of a machine. Two periods, second and third terms. Required of Sophomores. MR. WEBER.

SHOP-WORK.†

50. Wood-work.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood; elementary exercises in wood-turning. One period, first and second terms. Required of Juniors and second-year students. MR. BRAGG.

51. Forge-work.—Exercises in forging and welding; making exercises of iron; care of forge tools and fires. One period, first and second terms. For Juniors and second-year students. MR. DEAL.

52. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines; methods of wood-working and forging; care of belting and shafting. One period, first and second terms. For Juniors and second-year students. MR. BRAGG.

* For full information in regard to the Department of Physics, see course in Electrical Engineering.

† For full information in regard to shop-work, drawing, and other Mechanical Engineering subjects, see course in Mechanical Engineering.

MATHEMATICS.*

53. Arithmetic.—Begin with decimal fractions and complete the subject. Five periods, first term. Milne's *Standard Arithmetic*. Required of first-year students. Mr. MANN and Mr. HOLMES.

54. Algebra.—Up to quadratic equations. Wells's *Higher Algebra*. Five periods, second and third terms. Required of first-year students. Mr. MANN and Mr. HOLMES.

55. Advanced Algebra.—Wells's *Higher Algebra*. Begin at quadratic equations; general theory of equations, solution of higher equations, etc. Four periods, first and second terms. Required of Freshmen. Mr. HOLMES and Mr. FISH.

56. Geometry.—Plane and solid. Wentworth's *Plane and Solid Geometry*. Four periods, third term. Required of Freshmen. Mr. HOLMES.

ENGLISH.

57. English Composition.—A drill upon the forms of the language, the correct relation of words, the sentence, and the paragraph. Daily written exercises. Three periods. Required of first-year students. Mr. OWEN.

58. Introductory Composition and Rhetoric.—This course in the fundamentals of rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods. Required of Freshmen. Professor HILL and Mr. OWEN.

59. Rhetoric, Criticism, Essays.—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Two periods, second term. Professor HILL.

60. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

61. American Literature.—By means of an introductory text and by much reading students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Two periods, third term. Required of Sophomores. Professor HILL.

* For full information in regard to Mathematics, see course in Civil Engineering.

62. English Literature.—The development of English literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two hours, third term. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

HISTORY.

63. English History.—The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of Juniors. Professor HILL.

POLITICAL ECONOMY.

64. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Required of Seniors. Two periods. President WINSTON.

MILITARY SCIENCE.

65. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three afternoons. Required of all classes. Commandant and officers of the Battalion.

66. Tactics.—Theoretical instruction in the Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies, etc. One period. Required of Juniors. Captain PHELPS.

ENGINEERING COURSES.

Four Year Courses in

- II. Civil Engineering,
- III. Mechanical Engineering,
- IV. Electrical Engineering,
- V. Mining Engineering.

Two Year Courses in

- IIa. Building and Contracting,
- IIIa. Mechanic Arts.

Winter Course in

- IIb. Road-building.

COURSE IN CIVIL ENGINEERING.

The aim of the Course in Civil Engineering is to give such training as will enable our young men to take an active part in the work of advancing our State along material lines—developing its water-power, building railroads and public highways, constructing water supply and sewerage systems for our towns, etc. The student is given a large amount of practical work in the field and drafting-room, and acquires a fair degree of efficiency in the use of the various surveying instruments, and in drafting. At the same time it is recognized that a successful engineer requires a well trained mind—one that reasons logically, accurately, and quickly. Therefore a thorough course is given in Pure Mathematics and in all those branches of Applied Mathematics which are involved in the solution of engineering problems.

The aim has been to make this preëminently a technical course, yet subjects of general culture are included in order to give the student a broader mental training and better preparation for social and business life.

II. The Four Year Course in Civil Engineering, leading to the degree of Bachelor of Engineering.

CIVIL ENGINEERING.

Equipment.

There is a complete equipment of all instruments necessary to civil engineering field-work.

Subjects of Instruction.

67. Graphic Statics.—Determination of stresses in frame structures by graphical methods. Lectures and original problems. Two periods, second and third terms. Required of Juniors in Civil Engineering. Professor RIDDICK.

68. Surveying.—Land surveying, levelling, elements of triangulation, topographical surveying, road-making. Merriman's *Land Surveying*. Two periods, first term. Required of Juniors in Civil Engineering. Professor RIDDICK.

69. Railroad Engineering.—Reconnaissance, preliminary and location surveys, cross-sections, etc. Searles' *Field Engineering*. Two periods, second and third terms. Required of Juniors in Civil Engineering. Professor RIDDICK.

70. Surveying.—Field work. Use of instruments, compass, level, transit, and plane table. Practical work in land surveying, topography, levelling, railroad surveying, working up notes and platting. Two periods. Required of Juniors in Civil Engineering. Mr. FISH.

71. Drawing.—Descriptive Geometry, Stereotomy. Text-book, lectures, problems, and completed drawings. Two periods, second and third terms. Required of Sophomores in Civil Engineering. Two periods. Required of Juniors in Civil Engineering. Mr. FISH.

72. Bridge Design.—Calculation of stresses, design, specifications, and estimate of cost of a wooden roof truss and a steel highway bridge. Three periods, second and third terms. Required of Seniors in Civil Engineering. Mr. FISH.

73. Municipal Engineering.—Text book, lectures. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

74. Surveying (Field-work).—Triangulation and topography, surveys for sewers, water-works, etc. Three periods. Required of Seniors in Civil Engineering. Mr. MANN.

75. Roofs and Bridges.—Determination of stresses in roof and bridge trusses by the analytical method. Merriman's *Roofs and Bridges*. Original problems. Three periods, first term. Required of Seniors in Civil Engineering. Mr. FISH.

76. Hydraulics.—Methods of measuring flow of streams, laws governing flow in pipes and conduits, determination of water-power in streams, testing of hydraulic motors. Text-book, Merriman's *Hydraulics*. Two periods, second and third terms. Required of Seniors in Engineering. Professor RIDDICK.

77. Construction.—Masonry, foundations, railroads, dams, retaining walls, arches, etc. Baker's *Masonry Construction*. Lectures. Two periods, first term. Required of Juniors in Civil Engineering. Two periods, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

78. Mechanics of Materials.—Study of stresses in beams, columns, etc. Merriman's *Mechanics of Materials*. Three periods, first term. Required of Seniors in Civil and in Mechanical Engineering. Professor RIDDICK.

79. Road-building.—Text-book on construction of roads, streets, and pavements. Lectures on practical road-making in North Carolina. One period, second and third terms. Required of Seniors in Civil Engineering. Professor RIDDICK.

ARCHITECTURE.

80. Architecture.—Building materials, method of constructing buildings, plans, specifications, bill of materials, estimate of cost, design of buildings. Lectures. Two periods, first term. Required of Sophomores in Civil Engineering. Professor RIDDICK.

81. Architectural Drawing.—Drawings from a building already constructed, design of a dwelling, detail and perspective drawings. Two periods. Required of Sophomores in Civil Engineering. Mr. MANN.

MATHEMATICS.

82. Arithmetic.—Milne's *Standard Arithmetic*. Begin with decimal fractions and complete the subject. Five periods, first term. Required of first-year students in Mechanic Arts. Mr. HOLMES and Mr. MANN.

83. Algebra.—Wells's *Higher Algebra*. Up to quadratic equations. Five periods, second and third terms. Required of first-year students in Mechanic Arts. Mr. HOLMES and Mr. MANN.

84. Advanced Algebra.—Wells's *Higher Algebra*. Begin at quadratic equations; general theory of equations, solution of higher equations, etc. Four periods, first and second terms. Required of all Freshmen and of second-year students in Mechanic Arts. Mr. FISH and Mr. HOLMES.

85. Geometry.—Plane and Solid. Wentworth's *Plane and Solid Geometry*. Four periods, third term. Required of all Freshmen and of second-year students in Mechanic Arts. Four periods, first term. Required of Sophomores. Mr. YATES.

86. Trigonometry.—Four periods, second and third terms. Required of Sophomores. Mr. YATES.

87. Analytical Geometry.—Nichols's *Analytical Geometry*. Conic sections, higher plane curves, Geometry of three dimensions. Four periods, first and second terms. Required of Juniors. Mr. YATES.

88. Calculus.—Osborne's *Elements of Calculus*. Differential and integral, elements of differential equations. Four periods, third term. Required of Juniors. Two periods, first term. Required of Seniors. Professor RIDDICK.

89. Mechanics.—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Three periods. Required of Juniors. Professor RIDDICK and Mr. FISH.

90. Book-keeping.—The work in the text-books supplemented by numerous original examples and sets for practice. One period. Required of Freshmen. Mr. YATES.

COURSES IN MECHANICAL ENGINEERING AND MECHANIC ARTS.

The regular Four Year Course in Mechanical Engineering is intended to fit the student for positions of responsibility in engineering work, and also to furnish him with a basis to carry on more advanced engineering studies. It treats of the development and transmission of power, the design and construction of machines, and the calibration and efficiency tests of machinery, boilers and engines.

The Two Year Course is offered to students who wish to become machinists, draughtsmen, or stationary engineers.

III. The Four Year Course in Mechanical Engineering, leading to the degree of Bachelor of Engineering.

MECHANICAL ENGINEERING.

Equipment.

The drawing and recitation rooms, laboratory and shops of the Department of Mechanical Engineering are in the Engineering Building. They are of ample size and well lighted, and are arranged to be heated either by the exhaust steam from the engine or by live steam. On the first floor are a recitation room, engineering laboratory, machine shop, forge shop, wood-turning shop, and carpenter shop. On the second floor are the office, three drawing-rooms, and a library. In the latter are kept on file various scientific and technical journals, the trade circulars of prominent engineering firms, drawings and photographs of machinery, and tabulated data, as well as a large number of engineering books, the use of which is required.

The laboratory is provided with the necessary apparatus for making boiler and engine tests and for other work of an experimental character. The equipment consists of a two horse-power engine, a ten horse-power engine (both of which were built by students), a twenty-five horse-power Woodbury engine, a large Wheeler surface condenser, connected with a $4\frac{1}{2} \times 6 \times 6$ Blake air-pump, an Ericsson hot-air pumping engine, apparatus for making analyses of flue gases, a fuel calorimeter, a large Sturtevant fan and engine, a small water motor, a Worthington water meter, a complete Westinghouse air-brake equipment, a complete New York air-brake equipment, friction brakes, weirs, indicators, planimeters, slide rules, thermometers, calorimeters, gauges, tanks, scales, a Crosby gauge tester, and other apparatus for making tests.

In addition to the laboratory, there is a boiler-house equipped with one thirty horse-power, and two forty horse-power horizontal return tubular boilers, and two seventy-five horse-power Babcock and Wilcox boilers, several pumps, and a jet condenser, all of which are available for experimental purposes.

The shops are equipped as follows:

The wood-working equipment consists of fifteen double carpenters' benches, which accommodate thirty students, and all necessary tools for each bench; thirty 12-inch turning lathes, each lathe being fully equipped with turning tools; a rip and a cut-off saw bench, foot-feed, with dado attachment; a double revolving rip and cut-off saw bench, with dado attachment; a 20-inch surface planer; a 12-inch hand-jointer or buzz planer; a universal boring machine; a $6\frac{1}{2}$ -inch tenoning machine with cope heads; a 6-inch sash and blind sticker; a 30-inch band saw; a large jig saw; a shaper or edge moulding machine, with a very complete set of moulding cutters; a 38-inch grindstone; a wood trimmer; an adjustable mitre-box; a steam glue-heater and a large assortment of screw and of bar clamps, both iron and wooden.

The forge shop is a well lighted and ventilated, neatly paved room, 30 x 40 feet. It is equipped with twenty-eight forges, blast being furnished from a Sturtevant blower; two emery and two buffing wheels; an overhead exhaust system, operated by a 60-inch Sturtevant exhaust fan, for removing smoke from the fires; anvils and all necessary hand tools.

The machine shop contains a 16-inch Davis and Eagan lathe with 10-foot bed, a 14-inch Windsor lathe with 5-foot bed, a 13-inch

Barnes lathe with 5-foot bed, a 14-inch Putnam lathe with 4-foot bed, a 14-inch Flather lathe with 6-foot bed, three 14-inch lathes with 6-foot bed (built in the College shops by students), an 18-inch Prentiss shaper, a 24-inch upright Bickford drill press, a Brown and Sharp universal milling machine with all attachments, a 20-inch by 5-foot Pease planer, a large emery tool-grinding machine, a small emery tool-grinding machine, a 6-inch Curtis & Curtis pipe threading and cutting machine. The machines have full equipment of chucks, rests, and tools. The benches are well provided with vises.

The tool-room is well equipped with the necessary hand and pipe tools.

The power for the shops is furnished by a twenty-five horse-power Woodbury engine. When the shops are running one of the students has charge of the engine.

Subjects of Instruction.

91. Free-hand Drawing.—Work in the use of the pencil; isometric sketches; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of all Freshmen and first-year students in Mechanic Arts. Mr. WEBER.

92. Elementary Mechanical Drawing.—Use of instruments, geometric drawing, isometric drawing, elementary projections, drawings made to scale from working sketches of pieces of a machine. Two periods, second and third terms. Required of all Freshmen and first-year students in Mechanic Arts. Mr. WEBER.

93. Mechanical Drawing.—Working sketches and drawings of machine parts from the model. Tracing and blue-printing. Elementary machine design. Two periods. Required of Sophomores in Mechanical, Electrical, and Mining Engineering. Mr. CHITTENDEN.

94. Machine Design.—Calculations and working drawings of machine parts, such as fastenings, shafting, hangers, couplings, bearings, belt and tooth gearing, pulleys, and pipe couplings. Two periods. Required of Juniors in Mechanical Engineering. Mr. CHITTENDEN.

95. Boiler and Engine Design.—Calculations and working drawings of types of engines, boilers, pumps, condensers. Outline of power plant design. Four periods. Required of Seniors in Mechanical Engineering. Professor DICK.

96. Wood-work.—Use of bench tools, working from drawings, lining, sawing, planing. Practice in making simple exercises in wood. Elementary exercises in wood-turning. One period. Required

of Freshmen. Two periods. Required of first-year students in Mechanic Arts. Mr. BRAGG.

97. Forge-work.—Exercises in working with iron. Welding. Uses and care of forge tools and fires. One period. Required of Freshmen and first-year students in Mechanic Arts. Mr. DEAL.

98. Forge-work.—Exercises in working with steel. Tempering. Case-hardening. One period, first term. Required of Sophomores in Mechanical, Electrical, and Mining Engineering. Mr. DEAL.

99. Pattern-making.—Exercise in making patterns of machine parts. One period, second and third terms. Required of Sophomores in Mechanical, Electrical, and Mining Engineering. Mr. BRAGG.

100. Machinists' Work.—Bench and machine-work. Exercises in chipping and filing. Exercises in lathe-work, boring, reaming, drilling, planing, milling, and shaper-work. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Seven periods. Required of second-year students in Mechanic Arts. Mr. PARK.

101. Machinists' Work.—Making the parts of some machine, or of an engine. Making tools, such as taps and reamers. Laying out work. Three periods, first and second terms; two periods, third term. Required of Seniors in Mechanical Engineering. Mr. PARK.

102. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines. Methods of wood-working and forging. Care of belting and shafting. One period. Required of Freshmen and of first-year students in Mechanic Arts. Mr. BRAGG.

103. Mechanical Processes.—Description of machines used in engineering work. Methods of pattern-making, moulding, casting, and heavy forging. Description of various machine tools and methods of performing work on them; boiler-making and plate-work. One period. Required of Sophomores in Mechanical and Mining Engineering. Mr. CHITTENDEN.

104. Steam-engine.—Descriptive study of the simple steam-engine. Names and uses of the various parts of an engine. Various types of engines, fittings, foundations, and piping. Different types of boilers and settings. Arrangement of power plants. Care of engines and boilers. Two periods. Required of Juniors in Mechanical and Mining Engineering. Two periods, first and second terms. Required of Seniors in Electrical Engineering. Professor DICK.

105. Boilers and Engines.—Description and theory of boilers and engines, valve gears. Elementary thermodynamics. Principles in-

volved in engine and boiler design. Two periods. Required of Seniors in Mechanical Engineering. Professor DICK.

106. Principles of Mechanism.—Study of the communication of motion by gear-wheels, cams, screws, belts, and link-work; automatic feed motions; epicyclic trains; parallel and quick return motions. Problems. Three periods, second term; two periods, third term. Required of Seniors in Mechanical Engineering. Professor DICK.

108. Mechanical Engineering Laboratory.—Practice in engine and boiler-running; valve-setting; calibration of instruments; testing gauges, and lubricants. Use of indicators and calorimeters. Tests of boilers and engines. One period. Required of Seniors in Mechanical Engineering. Professor DICK and Mr. CHITTENDEN.

109. Mechanical Drawing.—Sketching and drawing of machine parts and machines. Detail working drawings. Tracing and blue-printing. Three periods. Required of second-year students. Professor DICK.

110. Mechanical Technology.—Classification and use of hand-tools and machines usually found in the pattern shop, foundry, and machine shop. Materials used and methods of carrying on work in these shops. Practical problems in estimating cost and material required to complete a piece of work; arrangements and sizes of belting, pulleys, and shafting. Two periods. Required of second-year students. Mr. CHITTENDEN.

111. Engines and Boilers.—Descriptive study of ordinary engines and boilers; proper methods of handling them. Care of pumps, condensers, engine and boiler fittings. Actual practice in engine-tending, boiler-firing, and dynamo-tending is also given with this course. Two periods. Required of second-year students. Mr. CHITTENDEN.

COURSE IN ELECTRICAL ENGINEERING.

Object.—The work in this department is designed for those who wish a thorough and practical training in Electrical Engineering. Only a most thorough training in the fundamental facts and principles of the science of electricity and magnetism will be satisfactory for a branch of engineering which is advancing so rapidly. A great deal of attention is, therefore, paid to good text-book work, and as soon as the first principles of the science are mastered by the student he is given a series of experiments in which careful measurements with exact instruments are made.

The department, as can be seen from the list of apparatus, is well equipped with dynamos, electric motors, and testing instruments for experimental work and for investigation of problems in electrotechnics. During the Senior year a course in designing the various electrical machines is given.

IV. The Four Year Course in Electrical Engineering, leading to the degree of Bachelor of Engineering.

Freshman Year.

PHYSICS.

Equipment.

The recitation rooms and laboratories of the Department of Physics are situated in the basement of the principal building. They are spacious and well lighted.

The equipment consists of apparatus for illustrating the principles of physical science and for instruction and practice in experiments, measurements, and tests.

Subjects of Instruction.

112. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Freshmen. Professor WEIHE.

113. Elementary Lessons in Electricity and Magnetism.—Two periods. Required of Sophomores. Professor WEIHE.

114. Physical Laboratory.—Measurements of length, area, and volume; determinations of density; laws of forces and velocities; pendulum. Two periods. Required of Sophomores in Electrical Engineering. Mr. WALTER.

115. Electrical Laboratory.—Electric and magnetic measurements. Two periods, first term. Required of Juniors in Electrical Engineering. Mr. WALTER.

ELECTRICAL ENGINEERING.**Equipment.**

The electrical engineering laboratory is a small brick building 30x50. It contains the electric light plant, consisting of a 35-horse-power automatic Skinner engine, a 11.5 K. W. 110-volt Westinghouse dynamo and a 20 K. W. 2-phase 110-volt Lincoln alternator. The laboratory contains in addition to this one 6-light T. H. arc machine, one 1-horse-power Sprague motor, one 8 K. W. 110-volt Siemens and Halske dynamo, connected in such a way as to give 3-phase currents, one 2-horse-power 3-phase 110-volt Gen. Elect. Co. motor, one 2 K. W. 110-volt LaRoche alternator. It also contains transformers, condensers, arc lamps, circuit breakers, etc.

The department possesses a small library of standard books on all branches of physics and electrical engineering.

Subjects of Instruction.

116. Dynamo Machinery.—Dynamo-electric machines. Dynamos and motors. Efficiency. Characteristic curves. Two periods. Required of Juniors in Mechanical and Electrical Engineering. Professor WEIHE.

117. Alternating Currents of Electricity.—Alternating current generators and motors. Static and rotary transformers. Condensers.

Three periods, first term. Required of Seniors in Electrical Engineering. Professor WEIHE.

118. Electric Light and Power Plants.—Storage batteries. Transmission of electric power. Three periods, second term. Required of Seniors in Electrical Engineering. Professor WEIHE.

119. Telephony and Telegraphy.—Three periods, third term. Required of Seniors in Electrical Engineering. Professor WEIHE.

120. Electrical Engineering Laboratory.—Standardizing of measuring instruments. Measurements of power. Characteristic curves. Two periods, second and third terms. Required of Juniors in Electrical Engineering. Mr. WALTER.

121. Electrical Engineering Laboratory.—Efficiency tests of direct and alternating current dynamos and motors and of transformers. Efficiency tests of electric plants. Photometry. Four periods. Required of Seniors in Electrical Engineering. Mr. WALTER.

122. Dynamo Design.—Design of dynamos, motors, and transformers. One period, first term; two periods, second and third terms. Required of Seniors in Electrical Engineering. Professor WEIHE and Mr. WALTER.

COURSES IN MINING ENGINEERING.

The course in Mining Engineering is intended to give the student the preliminary training necessary to enable him to enter upon a career in mining. To this end he is given instruction in English, History, Political Economy, and Mathematics, which are fundamental to the more technical studies and to the greatest usefulness as a citizen. Instruction in Physics and Chemistry, Mineralogy and Geology, Surveying, Shop-work, Drawing, Machinery and Steam affords the scientific and engineering knowledge upon which the successful work of the miner must depend. The more technical portion of the instruction includes ore-dressing, metal-working, ventilation, drainage, and illumination of mines.

Students wishing to specialize in Metallurgy will please see Courses in Industrial Chemistry.

V. The Four Year Course in Mining Engineering, leading to the degree of Bachelor of Engineering.

MINING ENGINEERING.

123. Mining.—Lectures on methods of mining, including prospecting, sinking, stoping, hoisting, pumping, and ventilating; the location of mining claims, mine fires, fire-damp and dust explosions; inundations; rescue and relief of men. Three periods, first term; five periods, second and third terms. For Seniors in Mining Engineering.

124. Ore Deposits.—A discussion of the general features and the formation of ore bodies, followed by a description of the deposits of iron, copper, lead, zinc, silver, gold, and the lesser metals, and the occurrence of coal, petroleum, natural gas, asphalt, building stones, etc., with special reference to North America. Three periods, second and third terms. For Seniors in Mining Engineering.

125. Ore Dressing.—Furnishing products for metallurgical treatment. Lectures on concentrating machinery and concentrating and enriching ores by mechanical means. Three periods, first term. For Seniors in Mining Engineering.

126. Mineralogy and Geology.—A discussion of the elements of these subjects. Four periods. For Juniors in Mining Engineering.

CHEMISTRY.

127. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the

science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Dr. FRAPS.

128. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Laboratory Guide*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. SYME.

129. Industrial Chemistry.—A discussion of the materials of engineering. Two periods, third term. Required of Seniors in Mechanical and Electrical Engineering. Professor WITHERS.

130. Metallurgy.—A study of fuel and its uses; iron and steel, copper, lead, gold, and silver, their properties, tests; ores and details of methods of reduction. Three periods. For Seniors in Mining Engineering.

ENGLISH.

131. English Composition.—A drill upon the forms of the language, the correct relation of words, the sentence, the paragraph. Daily written exercises. Three periods. Required of first-year short course students. Mr. OWEN.

132. Introductory Composition and Rhetoric.—This course in the fundamentals of Rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL and Mr. OWEN.

133. Rhetoric, Criticisms, Essays.—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Two periods, second term. Professor HILL.

134. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

135. American Literature.—By means of an introductory text and by much reading students are introduced to what is best in the literature of their own country. Books are studied at first hand.

Synopses, paraphrases, and critiques required. Two periods, third term. Required of Sophomores. Professor HILL.

136. English Literature.—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of all Seniors. Professor HILL.

HISTORY.

137. American History.—By means of a text-book supplemented by lectures and frequent assignment of topics for special study, students are in this course familiarized with the leading facts in the history of the United States. Two periods. Required of first-year students. Professor PHELPS.

138. Ancient and Modern History.—The student, by means of text-book and informal lectures, is introduced to the leading facts in the world's history, and to the significance and consequences of these facts. While historic sequence is carefully noted, the student follows, as far as possible, the topical method. Two periods. Required of all Freshmen. Professor PHELPS.

139. English History.—The first term of the Junior year is devoted to a study of English history. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of Juniors. Professor HILL.

POLITICAL ECONOMY.

140. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Two periods. Required of Seniors. President WINSTON.

MILITARY SCIENCE.

141. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours in the afternoon. Required of all classes. Commandant and officers of the Battalion.

142. Tactics.—Theoretical instruction in the Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies, etc. One period. Required of Juniors. Captain PHELPS.

COURSES IN INDUSTRIAL CHEMISTRY.

VI. The Four Year Course in Industrial Chemistry.

COURSES IN CHEMISTRY.

In harmony with the general purposes for which the College was founded, the courses in chemistry are arranged to prepare young men for careers in the analytical or the operating departments of the various chemical industries. To this end the training given in general, organic, and analytical chemistry is supplemented by instruction in technical chemical analysis and in the applied chemical subjects bearing more directly on the course the student has selected. The fundamental principles of engineering, machinery, etc., which are almost indispensable to the successful management of chemical plants, are taught, together with the cultural studies included in the other courses.

Raleigh as a Chemical Centre.

There are in the city of Raleigh and its vicinity several manufacturing plants to which, through the courtesy of the owners, the students in chemistry, in company with the teaching staff of the department, make visits each year. These include plants for the manufacture of illuminating gas, sulphuric acid, fertilizers, and artificial ice; for the extraction of cotton-seed oil; for the dyeing of cotton goods and for the tanning and dressing of leather.

The chemical laboratories of the North Carolina Department of Agriculture and of the North Carolina Agricultural Experiment Station are located in Raleigh, and through the courtesy of the officials in charge of these departments our students are welcomed whenever they desire to visit them.

The Berzelius Chemical Society—composed of the professional chemists residing in Raleigh and its vicinity—invites the students of this College to attend all meetings.

The State Museum is open to the public each day from 9 o'clock *a. m.* to 5 o'clock *p. m.*, and among other things contains a very excellent collection of the State's minerals, ores, and building stones.

Chemical Equipment.

The laboratories of general and of analytical chemistry are located in the main building of the College, and are well furnished. The

tables are of yellow heart pine with oak tops. Each student is provided with water, gas, all necessary reagents, ample working space, together with lockers for the storage of apparatus, etc. The quantitative laboratory is located on the first floor and will accommodate thirty-two students. The laboratory for introductory chemical work is in the basement and will accommodate seventy students.

The chemical library is well supplied with reference books. It receives the leading chemical journals and owns complete sets of many of the most important of them.

Dyeing Equipment.

The Dyeing Department is now permanently located in the basement of the new Textile Building. Here there is devoted to this work an experimental dyeing laboratory, a large dye house 70x50; a lecture room, an office and a stock-room.

The experimental dyeing laboratory is fitted up to accommodate thirty students and contains all the necessary conveniences, including dye baths heated by indirect steam coils, enabling the student to carry out six dye trials at once and giving uniform conditions when desired.

The dye house is being equipped with dyeing, bleaching, and mercerizing machinery for handling the material in all of its different forms. Already through the kindness of the different manufacturers, some donations have been made to this department and it is expected that the dye-house will be shortly equipped with the most approved machines.

Through the kindness of the dyestuff dealers a complete line of dyestuffs has been furnished the College and all the latest dyes are regularly sent.

On account of the rapidly increasing demand on the part of our cotton mills for dyers who are familiar not only with the practical operations of the dye-house, but with the principles underlying these operations, the Industrial Chemical Course is arranged so that students who desire to do so may devote special attention to the study of dyeing during their Junior and Senior years.

Graduates in Chemistry.

The chemical graduates of the College are engaged in the following lines of chemical work: Manufacture of illuminating gas, manufacture of sulphuric acid, manufacture of fertilizers, manufacture of tobacco products, refining and testing of oils, metallurgy of iron,

metallurgy of copper, dyeing of cotton goods, in agricultural experiment stations, in State departments of agriculture, and in teaching chemistry. These are employed in North Carolina and seven other States.

CHEMISTRY.*

143. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and DOCTOR FRAPS.

144. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Laboratory Guide*. The student performs under the eye of the instructor experiments designed to illustrate and emphasize the work of the class-room. He records in a note book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. SYME.

145. Organic Chemistry.—Remsen's *Introduction to the Study of the Compounds of Carbon*. The fundamental principles of organic chemistry and the more important compounds are studied. Two periods. For Juniors. Professor WITHERS.

146. Organic Chemistry.—Laboratory work. Gattermann's *Practical Methods of Organic Chemistry*, translated by Shober. This work is designed to familiarize the student with the more important organic compounds and with the processes involved in their preparation. Six periods, first term. For Seniors.

*For Agricultural Chemistry see Agricultural Courses.

147. Analytical Methods.—A discussion of methods and principles involved in qualitative and quantitative analysis. One period. Required of Juniors. DOCTOR FRAPS.

148. Analytical Chemistry (Introductory).—Laboratory work. Caldwell's *Chemical Analysis*. The student is taught to detect the presence of the more common elements in unknown substances. He is given practice in introductory gravimetric and volumetric quantitative work. Six periods, first term. Required of Juniors. Professor WITHERS and Mr. SYME.

149. Technical Analysis.—Laboratory work. The work of the student is continued in quantitative analysis, special attention being given to the analysis of those substances most closely connected with the course of the student. Six periods, second and third terms. Required of Juniors. Five periods, second and third terms. Required of Seniors. Professor WITHERS and Mr. SYME.

150. Assaying.—Practice work in the assaying of gold, silver, and lead ores by furnace methods. Three periods, first term. For Seniors.

151. Industrial Chemistry.—Thorpe's *Outlines of Industrial Chemistry*. A discussion of the processes and principles involved in the more important chemical industries. A discussion of the materials of Engineering. Two periods. Required of Seniors. Professor WITHERS.

152. Metallurgy.—A study of fuel and its uses; iron and steel, copper, lead, gold and silver, their properties, tests, ores, and details of methods of reduction. Three periods. For Seniors.

DYEING.

153. Dyeing.—Lectures. A study of the chemistry of the textile fibers, and the principles involved in bleaching, dyeing, and printing. The student becomes acquainted with the methods and machinery for dyeing cotton, wool, silk, and mixed goods, and learns the most important dyes now in use. Reference book, Fraps's *Principles of Dyeing*. Two periods. For Juniors, Mr. FRENCH.

154. Dyeing.—Laboratory work. The experiments are designed to accompany Course 153. Working with small skeins of yarns, the student learns different methods of dyeing, applies a number of dyes, tests their fastness to washing, and other agencies, and applies other tests. All dyed skeins and fastness tests are entered in suitable scrap-books. Two periods. For Juniors. Mr. FRENCH.

155. Chemistry of Dye-stuffs.—Nietzski's *Chemistry of the Organic Dye-stuffs*. A study of the chemical composition of dye-stuffs, and the processes involved in their manufacture. Two periods. For Seniors. Mr. FRENCH.

156. Dyeing.—Lectures. A further study of the properties and modes of application of dye-stuffs and mordants, especially those applied to cotton. Detailed study is made of certain important methods of dyeing cotton, as indigo, turkey red, aniline black, etc. Two periods. For Seniors. Mr. FRENCH.

157. Dyeing Laboratory.—Involves the bleaching and dyeing of cotton in the dye-house, dyeing to a given shade, mixing of dyes, and practical dyeing tests. The student learns how to study a new dye and devise methods for its practical application. Three periods. For Seniors. Mr. FRENCH.

CARDING AND SPINNING.*

158. Carding and Spinning.—Introductory work intended to give the student an introduction to the machines and methods of operating. One period. For Sophomores. Professor WILSON.

PHYSICS.†

159. Elementary Physics.—Properties of matter; fundamental units. British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Freshmen. Professor WEIHE.

160. Elementary Lessons in Electricity and Magnetism.—Two periods. Required of Freshmen. Professor WEIHE.

161. Physical Laboratory.—Measurements of length, area, and volume; determinations of density; laws of forces and velocities; pendulum. One period. Required of Sophomores. Mr. WALTER.

162. Electrical Laboratory.—Electric and magnetic measurements. Two periods, first term. For Juniors. Mr. WALTER.

ELECTRICAL ENGINEERING†.

163. Dynamo Machinery.—Practical units. Dynamo-electric machines. Dynamos and motors. Efficiency. Characteristic curves. Two periods. For Juniors. Professor WEIHE and Mr. WALTER.

*For further information see outline of Textile Courses.

†For full information see Course in Electrical Engineering.

164. Electrical Engineering Laboratory.—Standardizing of measuring instruments. Measurements of power. Characteristic curves. Two periods, second and third terms. For Juniors. Mr. WALTER.

MECHANICAL ENGINEERING.†

165. Free-hand Drawing.—Work in the use of the pencil; isometric sketches; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of Freshmen and first-year students. Mr. WEBER.

166. Elementary Mechanical Drawing.—Use of instruments, geometric drawing, isometric drawing, elementary projections, drawings made to scale from working sketches of pieces of a machine. Two periods, second and third terms. Required of Freshmen and first-year students. Mr. WEBER.

167. Mechanical Drawing.—Working sketches and drawings of machine parts from the model. Tracing and blue-printing. Elementary machine design. Two periods. Required of Sophomores. Mr. CRITTENDEN.

168. Wood-work.—Use of bench tools, working from drawings, lining, sawing, planing. Practice in making simple exercises in wood. Elementary exercises in wood-turning. One period. Required of Freshmen. Mr. BRAGG.

169. Forge-work.—Exercises in working with iron. Welding. Uses and care of forge tools and fires. One period. Required of Freshmen. Mr. DEAL.

170. Forge-work.—Exercises in working steel. Tempering, case-hardening. One period, first term. For Sophomores. Mr. DEAL.

171. Pattern-making.—Exercises in making patterns of machine parts. One period, second and third terms. For Sophomores. Mr. BRAGG.

172. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines; methods of wood-working and forging; care of belting and shafting. One period. Required of Freshmen. Mr. BRAGG.

173. Steam-engine.—Descriptive study of the simple steam-engine; names and use of the various parts of an engine; various types of engines and fittings, foundations, and piping; different types of boilers and settings; arrangement of power plants; care of engines and boilers. Two periods. For Seniors. Professor DICK.

†For full information see Course in Mechanical Engineering.

MINING ENGINEERING.

175. Ore-dressing.—Furnishing products for metallurgical treatment. Lectures on concentrating machinery, and the concentrating and crushing of ores by mechanical processes. Three periods, first term. For Seniors.

176. Mineralogy and Geology.—A discussion of the elements of these subjects. Four periods. For Seniors.

MATHEMATICS.

177. Advanced Algebra.—Wells's *Higher Algebra*. Begins at quadratic equations; general theory of equations, solution of higher equations, etc. Four periods, first and second terms. Required of Freshmen. Mr. FISH and Mr. HOLMES.

178. Geometry.—Plane and Solid. Wentworth's *Plane and Solid Geometry*. Four periods, third term. Required of all Freshmen in full courses, and second-year students in Mechanic Arts. Four periods, first term. Required of Sophomores. Mr. YATES.

179. Trigonometry.—Four periods, second and third terms. Required of Sophomores. Mr. YATES.

180. Analytical Geometry.—Nichols's *Analytical Geometry*. Conic sections, higher plane curves, Geometry of three dimensions. Four periods, first and second terms. For Seniors. Mr. YATES.

181. Calculus.—Osborne's *Elements of Calculus*. Differential and integral, elements of differential equations. Four periods, third term. For Seniors. Professor RIDDICK.

182. Mechanics.—Nature and measurement of forces, moments, conditions of equilibrium, moment of inertia, laws of motion, constraining and accelerating forces, dynamics of a rigid body, momentum and impact, work, power, friction, application of principles to various engineering problems. Three periods. For Seniors. Professor RIDDICK and Mr. FISH.

183. Book-keeping.—The work in the text-books supplemented by numerous original examples and sets for practice. One period. Required of all Freshmen. Mr. YATES.

ENGLISH.

184. Introductory Composition and Rhetoric.—This course in the fundamentals of Rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy,

and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL and Mr. OWEN.

185. Rhetoric, Criticism, Essays.—The student is taught the essentials of a good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Two periods, second term. Professor HILL.

186. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

187. American Literature.—By means of an introductory text and by much reading students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Two periods, third term. Required of Sophomores. Professor HILL.

188. English Literature.—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

HISTORY.

189. Ancient and Modern History.—The student, by means of text-book and informal lectures, is introduced to the leading facts in the world's history, and to the significance and consequences of these facts. While historic sequence is carefully noted, the student follows, as far as possible, the topical method. Two periods. Required of all Freshmen. Professor PHELPS.

190. English History.—The first term of the Junior year is devoted to the study of English History. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of Juniors. Professor HILL.

POLITICAL ECONOMY.

191. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. For Juniors. Two periods. President WINSTON.

MILITARY SCIENCE.

192. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours in the afternoon. Required of all classes. Commandant and officers of the Battalion.

193. Tactics.—Theoretical instruction in the Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies, etc. One period. Required of Juniors. Captain PHELPS.

TEXTILE COURSES.

VII. The Four Year Course in Textile Industry.

VIIa. The Two Year Course in Textile Industry.

THE TEXTILE DEPARTMENT.

The Department of Textile Industry, or Textile Department, as it is generally known, is located in a new building recently erected for its use. Instruction is given there in theoretical and practical cotton manufacturing. The student is taught the theory of spinning, weaving, designing, and dyeing. He learns how to produce different kinds of cotton goods, such as yarns, plain and fancy cotton cloths. The practical details of manufacturing must be learned, as the students perform all the work in connection with the operation of the machinery, setting and fixing it so as to produce the desired result. The building is equipped with carding and spinning machinery for producing cotton yarns from the bale, and looms of different kinds for weaving all grades of fabrics from sheeting to figured brocade work.

TEXTILE INSTRUCTION.

In this department two courses of instruction are offered, the Four Year Course, leading to the degree of Bachelor of Engineering, and the Short Course. The Four Year Course combines with the textile instruction certain practical and theoretical subjects which enable the student to understand better his special work. The textile instruction begins in the Sophomore year and is the principal work of the Junior and Senior years. The Short Course is offered to those mature students who cannot spend the time required for the Four Year Course. To be successful in the Short Course the student should have had a good preparation in his early studies, especially in mathematics, and some practical experience. To enter this course the student is required to pass the full entrance examinations for the Freshman Class in College, and must satisfy the professor in charge of his ability to go on with the work. Combined with the textile instruction are certain practical subjects which aim to increase the skill of the student.

The textile instruction given is of a practical nature, and covers the entire ground of cotton manufacturing. Its object is to prepare the

student for a useful career in this industry. There is a demand from the mills in this and other States for young men technically trained in the manufacture of cotton goods, especially of the finer grades. In addition to the textile instruction there are also in this course other practical studies. That the graduates are meeting with success in this industry is shown by the positions held by them. Among these are president, secretary and treasurer, manager, superintendent, designer, overseer of weaving, mill architect, machinery salesman. In fact, the graduates have gone into almost every branch of cotton manufacturing and have met with success. All have received the same training; the point to which each has advanced has depended upon the ability to deal with the general problems of manufacturing.

TEXTILE BUILDING AND EQUIPMENT.

The Textile Building is located on the west campus, just beyond the Horticultural Building. It is a two-story brick building 125x75 feet, with a basement, erected from the plans of The D. A. Tompkins Co., Charlotte, N. C. Throughout, its construction is similar to a cotton mill, being an illustration of standard construction in this class of buildings. The basement is fitted up with a laboratory and class-room for instruction in dyeing and with dyeing machinery. On the first floor are located the hand and power looms and the necessary warp-preparation machinery. The carding and spinning machinery is located on the second floor. Electricity is used as motive power, the machinery of each department in the building being driven by a separate motor. The machinery equipment consists of the latest types of cotton mill machinery manufactured by American builders. The following is a list of the machines and their makers:

Carding Department.

Opening-room.—One combination opener and breaker lapper, made by Kitson Machine Co., Lowell, Mass. One 40-inch single beater finisher lapper, with patent carding beater, made by Kitson Machine Co., Lowell, Mass.

Carding-room.—One 40-inch revolving flat card, 110 flats, with coiler, made by Mason Machine Works, Taunton, Mass. One 40-inch revolving flat card, 110 flats, with coiler, made by Whitin Machine Works, Whitinsville, Mass. One 40-inch revolving flat card, 110 flats with coiler, made by Saco and Pettee Machine Shops, Newton Upper Falls, Mass. One single railway head, with coiler, leather

rolls, made by Whitin Machine Works, Whitinsville, Mass. One drawing frame, four deliveries, leather rolls, made by Whitin Machine Works, Whitinsville, Mass. One railway head with coiler, metallic rolls, and improved evener motion, made by Saco and Pettee Machine Shops, Newton Upper Falls, Mass. One drawing frame, four deliveries, metallic rolls, made by Saco and Pettee Machine Shops, Newton Upper Falls, Mass. One 36-spindle slubber for 11x5½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 48-spindle intermediate roving frame for 9x4½-inch bobbin, made by Saco and Pettee Machine Shops, Biddeford, Me. One 64-spindle fine roving frame for 7x3½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I. One 80-spindle jack roving frame for 6x2½-inch bobbin, with ball-bearing top rolls, made by Woonsocket Machine and Press Co., Woonsocket, R. I.

Spinning Department.

Spinning-room.—One 64-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Whitin Machine Works, Whitinsville, Mass. One 80-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Mason Machine Works, Taunton, Mass. One 80-spindle spinning frame for warp; one 80-spindle spinning frame for filling, made by Fales & Jenks Machine Co., Pawtucket, R. I. One 64-spindle spinning frame for warp; one 64-spindle spinning frame for filling, made by Saco and Pettee Machine Shops, Biddeford, Me.

Spooling, Twisting, and Winding.—One 40-spindle spooler, made by Draper Company, Hopedale, Mass. One 40-spindle spooler, made by Whitin Machine Works, Whitinsville, Mass. One 32-spindle spooler, made by Easton & Burnham, Pawtucket, R. I. One 48-spindle twister, made by Whitin Machine Works, Whitinsville, Mass. One 72-spindle twister, one-half for wet, one-half for dry twisting, made by Draper Company, Hopedale, Mass. One 48-spindle twister, one-half for wet, one-half for dry twisting, made by Fales & Jenks Machine, Co., Pawtucket, R. I. One 50-spindle reel, one-half live, one-half dead spindles, made by D. A. Tompkins Co., Charlotte, N. C. One 50-spindle reel, made by Draper Co., Hopedale, Mass. One 6-spindle universal winding machine, made by Universal Winding Co., Boston, Mass. One 12-spindle bobbin winding machine, made by W. W. Altemus & Son, Philadelphia, Pa.

Weaving Department.

Warp Preparation.—One section warper, 400 ends, made by Draper Company, Hopedale, Mass. One beaming machine, made by Lewiston Machine Co., Lewiston, Me.

Looms.—One Northrop-Draper print cloth loom; one Northrop-Draper sateen loom, made by Draper Company, Hopedale, Mass. One high-speed loom, made by Kilburn & Lincoln, Fall River, Mass. One sheeting loom; one twill loom, made by Whitin Machine Works, Whitinsville, Mass. One print cloth loom; one 2x1 box loom; one 24-harness dobby loom, made by Mason Machine Works, Taunton, Mass. One Crompton 4x1 box gingham loom; one Crompton 4x1 box loom, with 20-harness dobby; one Crompton single box loom, with 400 hook Jacquard machine; one Knowles Gem loom, 4x4 box; one Stafford single box loom, with 20-harness dobby, made by Crompton & Knowles Loom Works, Worcester, Mass.

Dyeing Department.

The dyeing department is now permanently located in the basement of the new Textile Building. Here there is devoted to this work an experimental dyeing laboratory, a large dye-house 70x50, a lecture room, an office, and a stock-room.

The experimental dyeing laboratory is fitted up to accommodate thirty students and contains all the necessary conveniences, including dye-baths heated by indirect steam coils, enabling the student to carry out six dye trials at once and giving uniform conditions when desired.

The dye-house is being equipped with dyeing, bleaching, and mercerizing machinery for handling the materials in all of its different forms. Already through the kindness of the different manufacturers some donations have been made to this department, and it is expected that the dye-house will be shortly equipped with the most approved machines.

Through the kindness of the dyestuff dealers a complete line of dyestuffs has been furnished the College, and all the latest dyes are regularly sent.

Power Transmission.

Pulleys, shafting, hangers and couplings, made by Jones and Laughlins, Pittsburg, Pa.

Belting made by Fayerweather and Ladew, New York City, and Maloney-Bennett Belting Co., Chicago, Ill.

Heating Plant.

Steam Coils and Blowing Fan made by B. F. Sturtevant Co., Boston, Mass.

Description of Subjects.

194. Carding and Spinning.—Lectures and recitations; practice in operating card and spinning-room machinery. Cotton; classifying the plant; its growth; varieties; ginning; baling and marketing the raw staple. Cotton at the mill; selecting and mixing. Openers and lappers; cards; railway-heads; drawing-frames; slubbers; intermediates; speeders; jacks. Ring spinning-frames and mules. Spoolers and warpers. Twisters; reels; cone-winders. Construction and functions of each machine; making the various calculations. Drafts; speed of parts; production. Producing yarns of different counts, single and ply. Testing yarns for breaking strength and elasticity. Required of Sophomores, Juniors and Seniors in the full course and of first and second-year students in the short course. Professor WILSON.

195. Weaving.—Lectures and practice in warp preparation, operating and fixing looms, cloth finishing machinery. Warp preparation: pin frame warper; section warper; beam warper; construction of beam warper, stop motion measuring motion, creel; pattern warp making; long and short chain beamers. Slashing: steam cylinder slasher; hot air slasher; construction of slasher; creel; cylinders; immersion roll; squeeze rolls; drying fan; separator rolls; winding yarn on beam; cone drive; slow motion; measuring and cut marking motion. Sizing: construction of size kettle; size mixing and boiling; division of sizing ingredients; values of ingredients; size receipts for light, medium, and heavy sizing. Loom-mounting: reeds and

harnesses; drawing in; and putting warps in looms. Looms: construction of plain loom; principal movements in weaving; off and let take up motions; filling stop motion; warp stop motion. Cams and their construction. Magazine looms: construction and advantages. Drop box looms; chain building for box looms; changing boxes to have easy running loom; construction and value of multipliers; timing and fixing box motions. Pick and pick-looms. Box-chain, and multiplier-chain building; arranging colors in boxes; raising and lowering boxes to give easy running loom. Ball and shoe pick motion. Construction and fixing of head motion. Dobby; single and double action; construction and fixing of doobby; doobies with extra appliances necessary for weaving leno, towel, and other pile fabrics. Value of easers; half-motion; and jumper attachment for leno. Springs and spring-boxes. Negative and positive head motions. Pattern chain building. Jacquard, single and double lift; construction and tie up. Weave-room calculations: speed and production calculations; relative speed of looms; counts of cotton harness. Finishing: inspection of cloth; singeing and brushing; calendaring; tentering; folding and packing for the market. Equipment necessary for warp preparation, weaving, finishing; approximate cost of production of fabrics in the different processes. Required of Juniors and Seniors in the Four Year Course and of first and second-year students in the Short Course. Mr. NELSON.

196. Textile Designing.—Lectures and practice in designing, fabric structure and cloth analysis. Designing: method of representing weaves on design paper. Foundation weaves; plain; twill; satin. Ornamentation of plain weave; color effects on plain weave. Derivative weaves; plain and fancy basket weaves; warp and filling rib weaves. Broken twills; curved twills; corkscrew twills; entwining twills. Granite weaves; satin shading. Combination of weaves; figured weaving on plain ground. Fancy satin and figured stripes on plain ground. Spots arranged in different orders on plain, twill, satin ground. Imitation leno; honey-comb weaves. Bedford cords and combinations with other weaves. Wave designs; pointed twills; diamond effects. Plain and fancy piques. Double plain; figured double plain. Double cloths. Cloths backed with warp; cloths backed with filling. Cloths ornamented with extra warp; cloths ornamented with extra filling. Cotton velvet. Corduroy. Matelasse. Leno weaves with one, two, and more sets of doups. Principles of working both top and bottom doups. Combination of plain and

fancy weaves with leno. Methods of obtaining leno patterns. Jacquards. Distribution and setting out of figures for geometrical and floral effects. Distributing figures to prevent lines. Areas of patterns. Preparation of sketches. Transfer of sketches to design paper. Painting in the design with different weaves according to sketch. Shading of patterns. Card cutting and lacing. Fabric structure: textile calculations. Determining the number of threads and picks per inch to make a perfect cloth. Calculations to determine the texture in an unequally reeded fabric. Diameter of threads. Balance of cloth. Texture for double cloth. Cloth analysis. Calculating particulars of cloth from data ascertained from samples. Shrinkages. Dents in patterns; patterns in warp. Drafting and pattern chain building. Reed and harness calculations. Calculations to obtain quantities of warp and filling in stripe and check fabrics. To find number of threads per inch, using a given weight of warp; also number of picks per inch, using a given weight of filling. Yarn calculations. System of numbering woolen; worsted; silk; linen, and cotton yarns. Determination of one system of yarn to that of another. Required of Juniors and Seniors in the Four Year Course, and of first and second-year students in the Short Course. MR. NELSON.

DYEING.*

197. Dyeing.—Lectures. A study of the chemistry of the textile fibers, and the principles involved in bleaching, dyeing, and printing. The student becomes acquainted with methods and machinery for dyeing cotton, wool, silk, and mixed goods; and learns the most important dyes now in use. Reference book, Fraps' *Principles of Dyeing*. Two periods. Required of Juniors. MR. FRENCH.

198. Dyeing Laboratory.—The experiments are designed to accompany Course 197. Working with small skeins of yarns, the student learns different methods of dyeing, applies a number of dyes, tests their fastness to washing, and other agencies, and applies other tests. All dyed skeins and fastness tests are entered in suitable scrap-books. Two periods. Required of Juniors. MR. FRENCH.

CHEMISTRY.*

201. Inorganic Chemistry.—Remsen's *Introduction to the Study of Chemistry*. The common elements and their principal compounds

*For further information see Courses in Industrial Chemistry.

are studied, together with some of the fundamental principles of the science. The lectures are illustrated by experiments and the exhibition of specimens. Three periods. Required of Sophomores. Professor WITHERS and Doctor FRAPS.

202. Inorganic Chemistry.—Laboratory work. Remsen and Randall's *Laboratory Guide*. The student performs, under the eye of the instructor, experiments designed to illustrate and emphasize the work of the class-room. He records in a note-book his observations and the conclusions drawn from them. Two periods. Required of Sophomores. Mr. SYME and Mr. FRENCH.

MECHANICAL ENGINEERING.*

206. Free-hand Drawing.—Work in the use of the pencil; isometric sketches; technical sketches of objects, usually parts of a machine. Two periods, first term. Required of Freshmen and first-year students. Mr. WEBER.

207. Elementary Mechanical Drawing.—Use of instruments; geometric drawing; isometric drawing; elementary projections; drawings made to scale from working sketches of pieces of a machine. Two periods, second and third terms. Required of Freshmen and first-year students. Mr. WEBER.

208. Mechanical Drawing.—Working sketches and drawing machine parts from the models; tracing and blue-printing; elementary machine design. Two periods. Required of Sophomores. Mr. CHITTENDEN.

209. Wood-work.—Use of bench tools; working from drawings, lining, sawing, planing; practice in making simple exercises in wood-turning. One period. Required of Freshmen. Mr. BRAGG.

210. Forge-work.—Exercises in working with iron, welding; uses and care of forge-tools and fires. One period. Required of Freshmen. Mr. DEAL.

211. Forge-work.—Exercises in working with steel; tempering; case-hardening. One period, first term. Required of Sophomores and second-year students. Mr. DEAL.

212. Pattern-making.—Exercises in making patterns, generally of machine parts. One period, second and third terms. Required of Sophomores and second-year students. Mr. BRAGG.

214. Mechanical Technology.—Classification and uses of wood-working and forging tools and machines; principles of correct methods

*For full information see Course in Mechanical Engineering.

of wood-working and forging; care of belting and shafting. One period. Required of Freshmen. Mr. BRAGG.

215. Mechanical Processes.—Description of machines used in engineering-work; methods of pattern-making; moulding, casting and heavy forging; description of various machine tools and methods of performing work on them; boiler-making and plate-work. One period. Required of second-year students. Mr. CHITTENDEN.

216. Steam-engine.—Descriptive study of the simple steam-engine; names and uses of the various parts of an engine; various types of engines and fittings, foundations, and pipings; different types of boilers and setting; arrangement of power plants; care of engines and boilers. Two periods. Required of Seniors. Professor DICK.

PHYSICS.*

217. Elementary Physics.—Properties of matter; fundamental units; British and metric standard measures; definitions of force, work, and power; laws of motion; principles of machines; mechanics of fluids; heat; sound; introduction to the study of light. Two periods. Required of Freshmen. Professor WEHRE.

218. Elementary Lessons in Electricity and Magnetism.—Two periods. Required of Sophomores. Professor WEHRE.

ELECTRICAL ENGINEERING.

219. Dynamo Machinery.—Dynamo-electric machines. Dynamos and motors. Efficiency. Characteristic curves. Two periods. Required of Juniors. Professor WEHRE and Mr. WALTER.

MATHEMATICS.†

220. Advanced Algebra.—Begins at quadratic equations; general theory of equations; solution of higher equations, etc. Wells's *Higher Algebra*. Four periods, first and second terms. Required of Freshmen. Mr. YATES and Mr. FISH.

221. Geometry.—Plane and solid. Wentworth's *Plane and Solid Geometry*. Four periods, third term. Required of Freshmen. Four periods, first term. Required of Sophomores. Mr. HOLMES.

222. Trigonometry.—Four hours, second and third terms. Required of Sophomores. Mr. YATES.

223. Book-keeping.—The work of the text-books supplemented by numerous original examples and sets for practice. One period. Required of Freshmen. Mr. YATES.

*For full information see Course in Electrical Engineering.

†For full information see Course in Civil Engineering.

ENGLISH.

224. Introductory Composition and Rhetoric.—This course in the fundamentals of Rhetoric is made thoroughly practical. Students write instead of studying about how to write. The written work is accompanied by a steady drill upon grammatical forms, accuracy, and ease of expression. The student is taught to plan all work, and then to develop his plan in simple, idiomatic English. Three periods a week. Required of Freshmen. Professor HILL and Mr. OWEN.

225. Rhetoric, Criticisms, Essays.—The student is taught the essentials of good style by constant practice. Themes in narration, description, and exposition receive in this course especial attention. Required of Sophomores. Two periods, second term. Professor HILL.

226. Argumentation.—A study of the methods of our best speakers, followed by the laws of argumentation, and the writing of many exercises. Required of Seniors. Two periods, third term. Professor HILL.

227. American Literature.—By means of an introductory text and by much reading students are introduced to what is best in the literature of their own country. Books are studied at first hand. Synopses, paraphrases, and critiques required. Two periods, third term. Professor HILL.

228. English Literature.—The development of English Literature through its great periods and through its representative men. Much parallel reading is required. In a general way Minto's plan of study is followed. Two periods, third term. Required of Juniors. Two periods, first and second terms. Required of Seniors. Professor HILL.

HISTORY.

229. Ancient and Modern History.—The student, by means of text-book and informal lectures, is introduced to the leading facts in the world's history, and to the significance and consequences of these facts. While historic sequence is carefully noted, the student follows, as far as possible, the topical method. Two periods. Required of all Freshmen. Professor PHELPS.

230. English History.—The first term of the Junior year is devoted to a study of English history. The text is supplemented by lectures on important periods. Two periods, first and second terms. Required of all Juniors. Professor HILL.

POLITICAL ECONOMY.

231. Political Economy.—This course deals with public problems relating to the production, distribution, and exchange of wealth. The leading topics discussed are capital, wages, money, transportation, and taxation. Instruction is given by lectures and text-books. Two periods. Required of Seniors. President WINSTON.

MILITARY SCIENCE.

232. Drill.—Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies; Marches and Minor Tactics. United States Infantry Drill Regulations. Three hours in the afternoon. Required of all classes. Commandant and officers of the Battalion.

233. Tactics.—Theoretical instruction in the Schools of the Soldier; Company and Battalion in Close and Extended Order; Ceremonies, etc. One period. Required of Juniors. Captain PHELPS.

NORMAL COURSES.

I. For Rural Teachers:

- (a) Two Year Course.
- (b) One Year Course.
- (c) Summer Course.

II. For City Teachers:

- (a) Two Year Course.
- (b) One Year Course.
- (c) Summer Course.

The Normal Courses are intended for the education of teachers, both men and women, chiefly along industrial lines. Industrial education is being introduced into our public schools, and the College has a constant demand for well trained industrial teachers. It is hoped by means of the Normal Courses to help supply this demand. Our School Law already requires agriculture to be taught in the public schools, and manual work will doubtless be added.

The Courses for Rural Teachers are devoted largely to agriculture and nature study; the Courses for City Teachers, to drawing and manual training. Each of these courses also includes a review of other public school studies.

Persons already engaged in teaching may, at slight expense of time and money, by means of the short courses or the Summer Courses, make themselves proficient in one or more industrial lines. Persons preparing to teach may take the full courses, and thus become proficient not only along industrial lines but also in the other public school branches and in one or more sciences, or in higher Mathematics and English. The industrial training given is both practical and theoretical, and is arranged with reference to the present needs of the public schools in North Carolina. The expenses in the Normal Courses are the same as in the other courses of the colleges, except in the Summer Courses.

The Normal Courses are as follows:

I. Courses For Rural Teachers.

(a) TWO YEAR COURSE.

First Year.

SUBJECTS.	PERIODS PER WEEK.		
	1st Term.	2d Term.	3d Term.

Architecture	2	—	—
Architectural Drawing	2	2	2
Algebra and Geometry	4	4	4
Drill	3	3	3
Elective: Physics 2, English (132) 3, English (133 and 135) 2, History 2, Nature Study (Plants) 3, Nature Study (Animals) 3, Book-keeping 1, Chemistry 3, Chemical Laboratory 2, Electricity and Magnetism 2, Plant Diseases 3, Human Physiology 3, Physiological Botany 3, Geometry and Trigonometry 4, Descriptive Geometry 2.			

(c) SUMMER COURSE.

SEE ANNOUNCEMENT OF SUMMER SCHOOL BELOW.

SUMMER SCHOOL FOR TEACHERS.

GEO. T. WINSTON, A. M., LL.D., President.

CHAS. W. BURKETT, M. S., Ph. D., Dean of Industrial Department.

EDWARD P. MOSES, A. M., Dean of Normal and Literary Departments.

CHARLES J. PARKER, Secretary.

COURSES OF INSTRUCTION FOR BOTH MEN AND WOMEN.

Agriculture, including Gardening, Floriculture, Fruit Growing, Budding and Grafting, Dairying, Poultry-raising, Stock-judging, breeding and feeding, Soil Culture, etc.

The above is in accordance with State law requiring elementary agriculture in public schools. Such instruction will be given as can be repeated in the public schools.

Road-building, including location, grading, construction of road-bed, drainage, materials for road-covering, road-making machinery, leveling, use of level instruments, draughting. Instruction is both practical and theoretical.

Manual Training, including work in Wood, Iron, Plaiting, Weaving, Drawing, Designing and Ornamentation.

Nature Study, including Soils, Plant Growth, Plant Nutrition, Plant Diseases, Insects and Birds in Relation to Agriculture.

Normal Department, including Public School Branches and Kindergarten. Practice School of 100 or more children. Instruction in every grade of work for children from six to fourteen years of age. Lectures and Illustrations on the Grading of Schools, Classification, Methods, etc.

Literary Department, including instruction in the following subjects: English, English Literature, American Literature, Latin, Greek, French, German, North Carolina History, American History, General History, Algebra, Geometry, Music, including Vocal Music

for Public Schools, Sight Singing, Chorus Work and Instrumental Music.

Normal Classes for Sunday School Workers.

Round Table Talks each afternoon.

Lectures and Concerts each evening.

Expenses.—Board and room in College Dormitories—separate buildings for men and women—\$10.00 per month. Those wishing board outside can secure it at \$12.00 per month up. Tuition, \$5. Registration, \$1. Drawing instruments, \$1.50.

Session begins July 1 and closes July 31.

DONATIONS.

The College makes thankful acknowledgment of the receipt of the following gifts during the year:

To the Department of Civil Engineering.

Keuffel & Esser Company, New York, N. Y.—One engineer's Y level.

To the Department of Chemistry.

Chilean Nitrate Works, W. S. Myers, Director, New York, N. Y.—Set of lantern slides showing nitrate deposits and works.

To the Mechanical Engineering Department.

Westinghouse Air-Brake Company.—Complete air-brake equipment.

New York Air-Brake Company.—Complete air-brake equipment.

Babcock & Wilcox Company, New York, N. Y.—Half the cost of two 75 horse-power boilers.

To the Textile Department.

Draper Company, Hopedale, Mass.—One 50-spindle reel; loom templates; one Schaeer cloth scale; template and calculating rule; oil cans; bale shears; lifting rod cleaners; band scale; twister stop motions.

James H. Bellington Company, Philadelphia, Pa.—Reduced prices on bobbins, spools and skewers, and supply of shuttles for looms.

American Vulcanized Fiber Company, Wilmington, Del.—Reduced price on roving cans.

Jas. Hill Manufacturing Company, Providence, R. I.—Reduced price on roving cans.

B. F. Sturtevant Company, Boston, Mass.—Blower heating system, consisting of fan and steam coils.

Covel & Osborne Company, Fall River, Mass.—Banding for spinning frames, spoolers and twisters.

National Ring Traveler Company, Providence, R. I.—Ring travelers for spinning and twisting.

Jones & Laughlins, Pittsburg, Pa.—Additional pulleys.

American Pulley Company, Philadelphia, Pa.—One wrought steel pulley.

Cling Surface Manufacturing Company, Buffalo, N. Y.—One can "Cling Surface" belt dressing.

Barber & Colman, Boston, Mass.—One "Barber" knotter.

Southern Shuttle and Bobbin Company, Westminster, S. C.—Supply of spools and shuttles.

Emmons Loom Harness Company, Lawrence, Mass.—Cotton loom harness and lease reed.

Dixie Oil Works, Baltimore, Md.—Can loom oil.

S. A. Felton, Son & Company, Manchester, N. H.—Mill brushes.

American Supply Company, Providence, R. I.—Loom reeds and beaming combs.

Robert Carruthers, Lowell, Mass.—Loom reeds and slasher combs.

American Enamel Company, Providence, R. I.—Lease rods and yarn drying rods.

L. S. Watson Manufacturing Company, Leicester, Mass.—Harness shafts, heddles and hand cards.

Loom Picker Company, Biddeford, Me.—Pickers, lug straps and harness straps.

Faulkner, Page & Company, New York.—Box sample cloths.

Fairmont Machine Company, Philadelphia, Pa.—Warp dyeing machine.

Elizabeth Cotton Mill, Charlotte, N. C.—Ten pounds of Nos. 50 and 60, 2-ply, Egyptian cotton yarn.

Proximity Manufacturing Company, Greensboro, N. C.—Two beams of yarn.

Dilling Cotton Mill, King's Mountain, N. C.—One beam No. 28 yarn.

Newse River Mills, Raleigh, N. C.—One beam No. 18 yarn.

Gaffney Manufacturing Company, Gaffney, S. C.—One print cloth warp.

Chatham Manufacturing Company, Elkin, N. C.—Ten pounds woolen yarn.

Ada Manufacturing Company, Charlotte, N. C.—Fifteen pounds cotton yarn.

Farbenfabriken of Elberfeld Company, New York, N. Y.—Samples of dye stuffs.

H. A. Metz & Company, New York, N. Y.—Samples of dye stuffs.

Cassella Color Company, New York, N. Y.—Samples of dye stuffs.

Berlin Aniline Company, New York, N. Y.—Samples of dye stuffs.

A. Klipstein & Company, New York, N. Y.—Samples of dye stuffs.

C. Bischoff & Company, New York, N. Y.—Samples of dye stuffs.

Kuttroff, Pickhardt & Company, New York, N. Y.—Samples of dye stuffs.

New York and Boston Dyewood Company, New York, N. Y.—Samples of dye stuffs.

F. E. Atteaux & Company, Boston, Mass.—Samples of dye stuffs.

Schoellkoff, Hartford & Hanna Company, Buffalo, N. Y.—Samples of dye stuffs.

Read, Holliday & Sons, Ltd., New York, N. Y.—Samples of dye stuffs.

Courtesies Extended.

Textile Excelsior, Charlotte, N. C.

Textile Manufacturers' Journal, New York City.

Fiber and Fabric, Boston, Mass.

Manufacturers' Record, Baltimore, Md.

Dyers' Bulletin, Philadelphia, Pa.

The Chemical Trade Review and Dyers' Trade Journal, Philadelphia, Pa.

Garment Dyers' Guide, Philadelphia, Pa.

Pilot Cotton Mills, Raleigh, N. C.

Caraleigh Cotton Mills, Raleigh, N. C.

To the Library.

J. H. Cutler, Raleigh, N. C.—"Christmas in the Adirondacks," by W. H. H. Murray.

Prof. W. A. Withers, Raleigh, N. C.—"Historic Doubts as to the Execution of Marshal Ney," by J. A. Weston.

D. W. Robertson, Washington, D. C.—"The Caxtons," by Lord Lytton.

L. T. Winston, Raleigh, N. C.—"Wrecked on a Reef."

J. S. Picson, New York.—"James Chalmers: His Autobiography and Letters by Richard Lovett.

Mrs. George T. Winston, Raleigh, N. C.—"Diary of a Goose Girl," by Kate Douglas Wiggin, and "Elizabeth and her German Garden."

Mr. S. W. Cramer, Charlotte, N. C.—Collection of Technical Magazines.

CATALOGUE OF STUDENTS.

GRADUATES. 7

<i>Name.</i>	<i>Post-office.</i>	<i>Major Course.</i>
JUNIUS SIDNEY CATES,	Swepsonville,	Agriculture.
JOHN CHESTER KENDALL,	Peterboro, N. H.,	Bacteriology.
CARROLL LAMB MANN,	Englehard,	Civil Eng.
RUSSELL ELSTNER SNOWDEN,	Snowden,	Civil Eng.
WILLIAM ANDERSON SYME,	Raleigh,	Chemistry.
CLEVELAND DOUGLASS WELCH,	Waynesville,	Agr. and El.
LOUIS THOMAS YARBROUGH,	West Raleigh,	Civil Eng.

SENIOR CLASS. 39

SIDNEY WOODWARD ASBURY,	Burkimon,	M. E.
— WILLIAM MORTON BOGART,	Washington,	M. E.
— LESLIE NORWOOD BONEY,	Wallace,	Tex.
— JOHN SAMUEL PINKNEY CARPENTER,	Lincolnton,	Tex.
— WALTER CLARK, JR.,	Raleigh,	M. E.
— JOHN ELIOT COIT,	Salisbury,	Agr.
— SUMMEY CROUSE CORNWELL,	Dallas,	C. E.
— CHARLES LESTER CREECH,	Greensboro,	Chem.
— EUGENE ENGLISH CULBRETH,	Statesville,	E. E.
— WALTER LEE DARDEN,	Goldsboro,	Tex.
— JUNIUS FRANKLIN DIGGS,	Diggs,	Chem.
— THEOPHILUS THOMAS ELLIS,	Henderson,	E. E.
EDWARD EVERITT ETHERIDGE, JR.,	Elizabeth City,	E. E.
— JOHN DANIEL FERGUSON,	Bladenboro,	E. E.
— HUGH PIERCE FOSTER,	Nance,	M. E.
— OLIVER MAX GARDNER,	Shelby,	Chem.
— LAMAR CARSON GIDNEY,	Shelby,	E. E.
— JOHN HOWARD GLENN,	Crowder's Creek,	M. E.
— EMIL GUNTER,	Pierson, Fla.,	E. E.
— EUGENE COLISTUS JOHNSON,	Ingold,	M. E.
— JAMES MATTHEW KENNEDY,	McClammy,	Tex.
WILLIAM FRANK KIRKPATRICK,	Charlotte,	E. E.
— BENNETT LAND, JR.,	Elizabeth City,	C. E.

<i>Name.</i>	<i>Post-office.</i>	<i>Major Course.</i>
JOHN THOMAS LAND,	Poplar Branch,	C. E.
EDMOND SHAW LYTCH,	Laurinburg,	E. E.
JESSE JOHN MORRIS,	Norfolk, Va.	C. E.
DAVID STARR OWEN,	Fayetteville,	E. E.
JOHN HARVEY PARKER,	Hillsboro,	E. E.
JOEL POWERS,	Method,	M. E.
EDWARD HAYS RICKS,	Enfield,	M. E.
GASTON WILDER ROGERS,	Raleigh,	E. E.
CHARLES BURDETTE ROSS,	Charlotte,	Tex.
JOHN HOUSTON SHUFORD,	Charlotte,	Chem. (D).
HOWARD SIMPSON,	Simpson Store,	M. E.
EDWARD ROE STAMPS,	Raleigh,	Tex.
GEORGE YATES STRADLEY,	Asheville,	C. E.
CHARLES EDWARD TROTTER,	Franklin,	Chem.
JONATHAN WINBORNE WHITE,	Greenville,	Chem. (D).
EDWIN SKYMOUR WHITING,	Hamlet,	Tex.

JUNIOR CLASS.

NELSON ADAMS,	McColl, S. C.,	M. E.
HAYWOOD LEWIS ALDERMAN,	Greensboro,	E. E.
EUGENE CLEVELAND BAGWELL,	Raleigh,	C. E.
EDWARD PAIR BAILEY, JR.,	Wilmington,	M. E.
