MCKIMMON VILLAGE

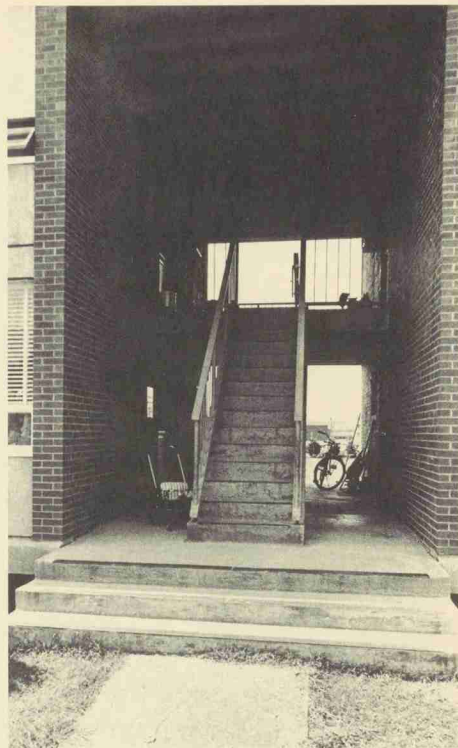

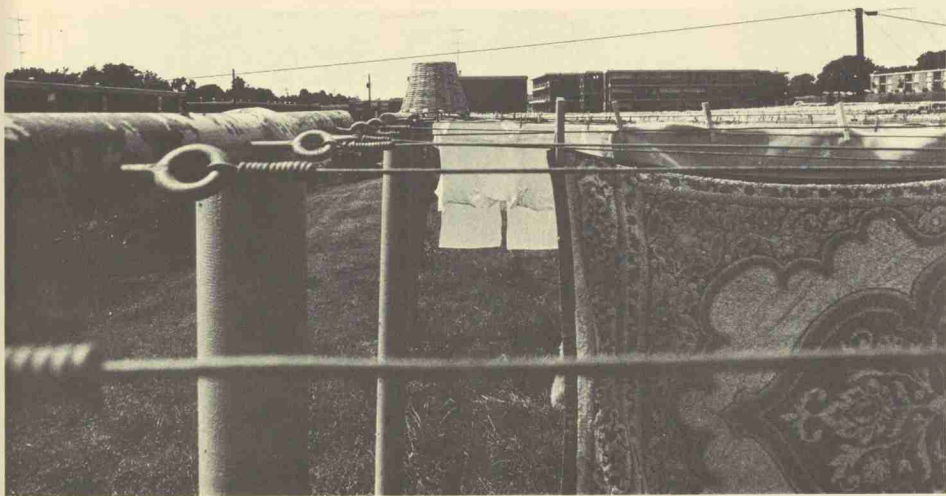

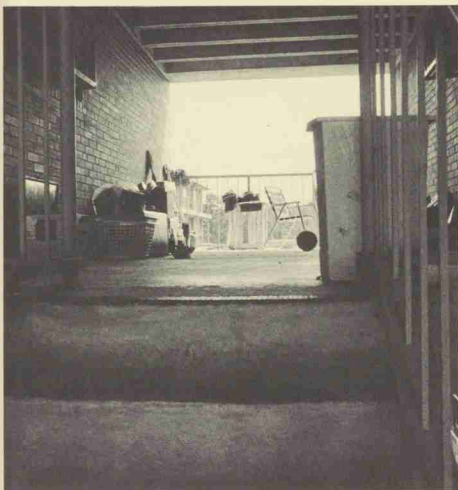

Of course the main difference between McKimmon Village and the rest of the campus is the sex of your roommate. This means added responsibilities, added work, and a little less flippancy about what one plans to do with ones' life. The student who live here finds himself living the life of a commuter: off to work in the morning, back to home at night. The "work" is usually a lecture with a grade report at the end instead of a paycheck, but otherwise the comparison remains valid.

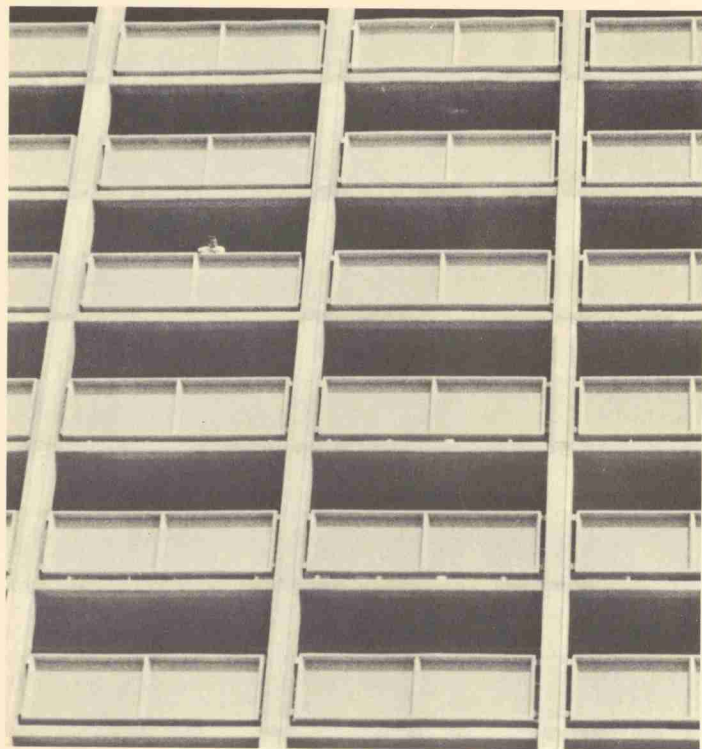

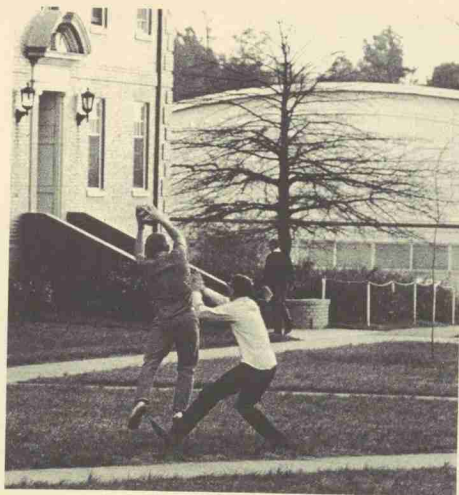

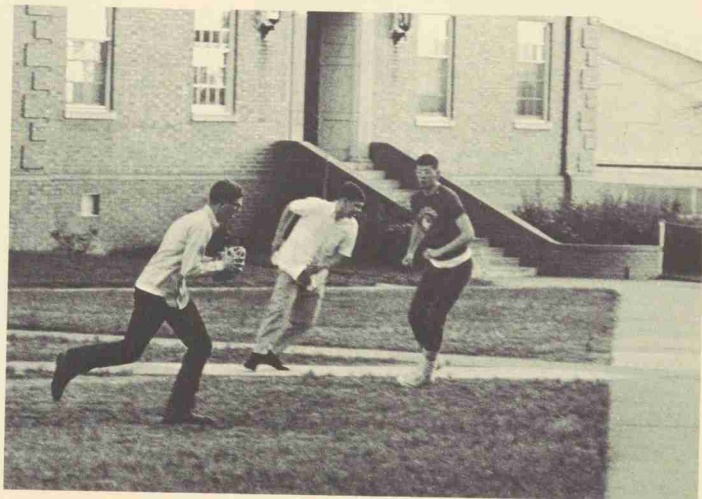

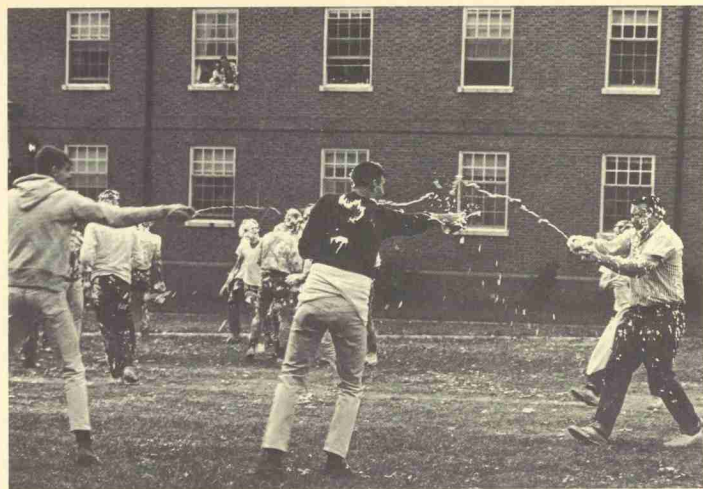

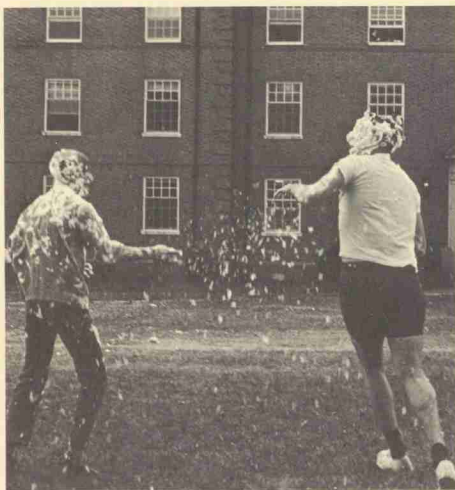

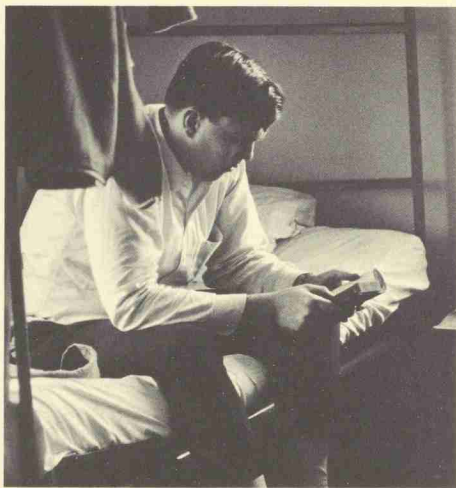

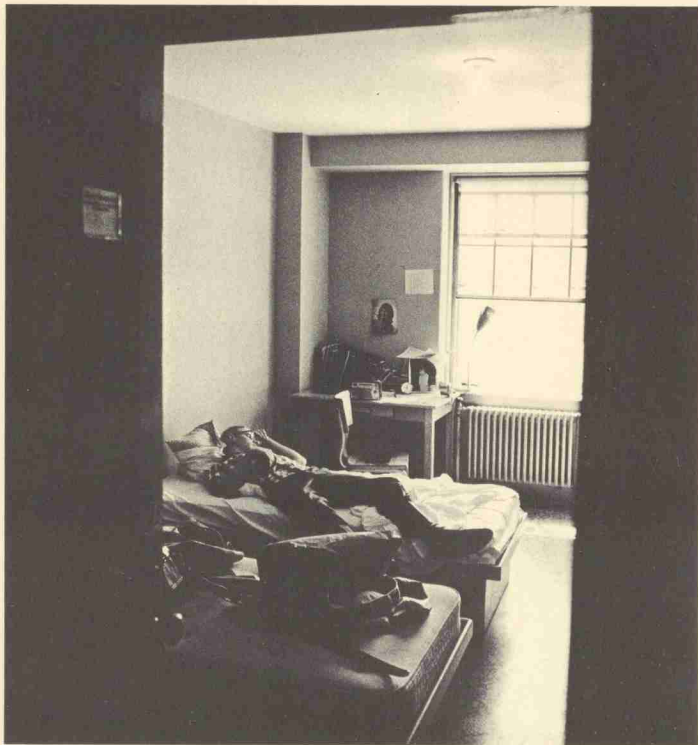

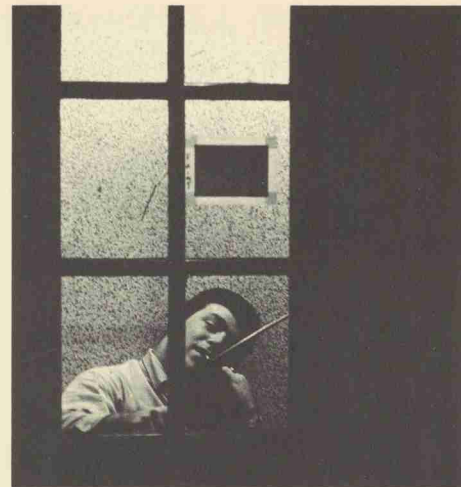

[illegible]

The room of the average American Dormdweller (a lineal descendant of the cave man) is a cultural phenomenon unique to this continent. Although no two are alike, all possess certain traits by which an observant visitor may easily identify them:

A window sill which contains last week's half-eaten can of baked beans, last month's only slightly moldy orange, and three empty beer bottles (two domestic, one imported).

Tattered paperback copies of *Fanny Hill* and *Candy* with all aesthetically stimulating passages clearly marked.

A "wastebasket" (cardboard box, bucket, washtub, etc.) which contains a slight odor and three times as much refuse as it was designed for.

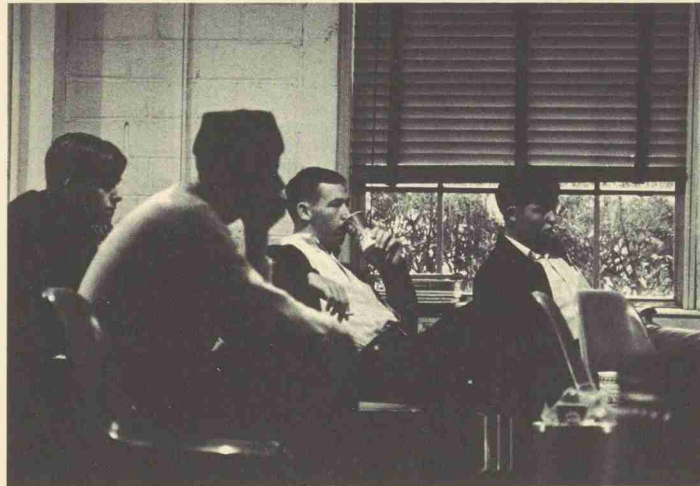

Two unmade beds.

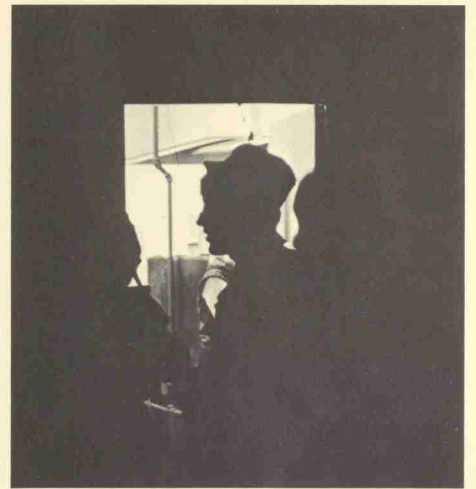

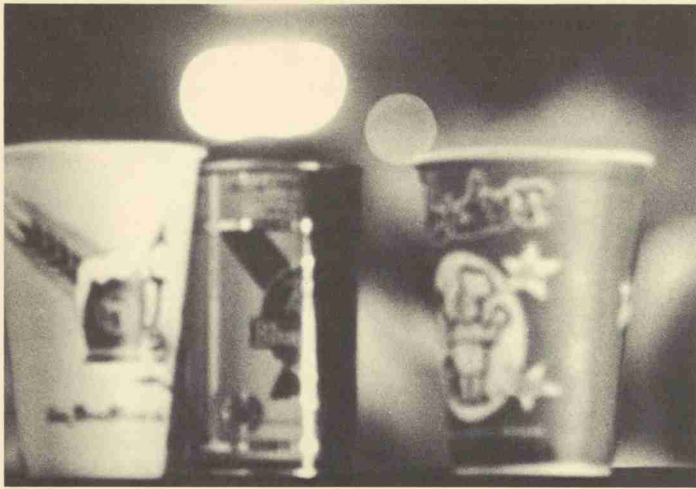

A two-inch layer of slightly soiled underwear on the floor.

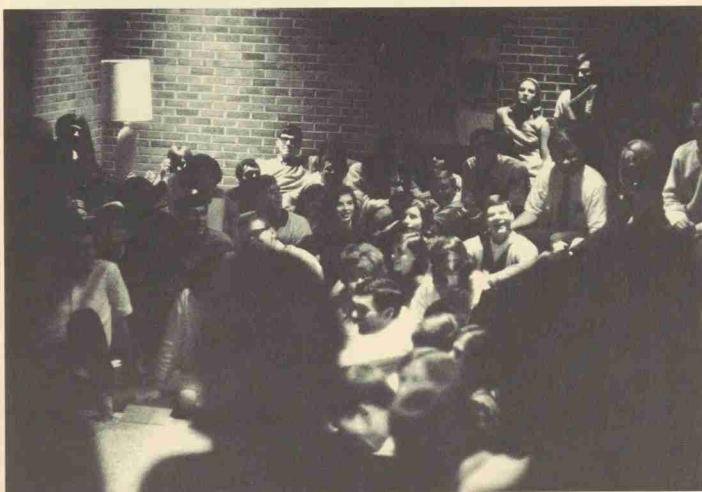

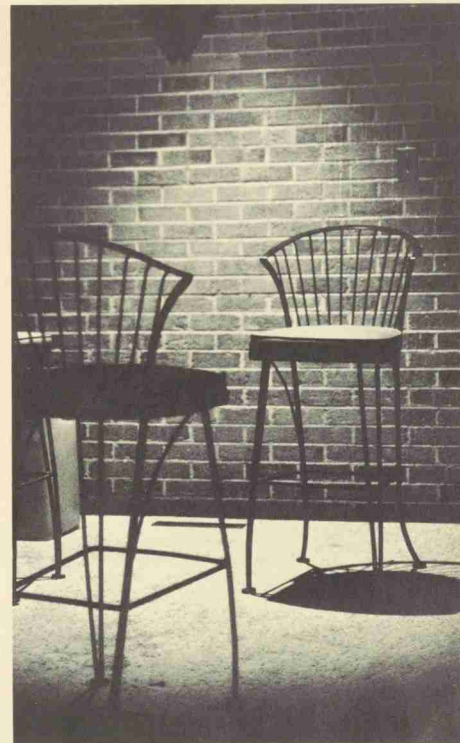

A half-inch layer of dust on all woodwork.

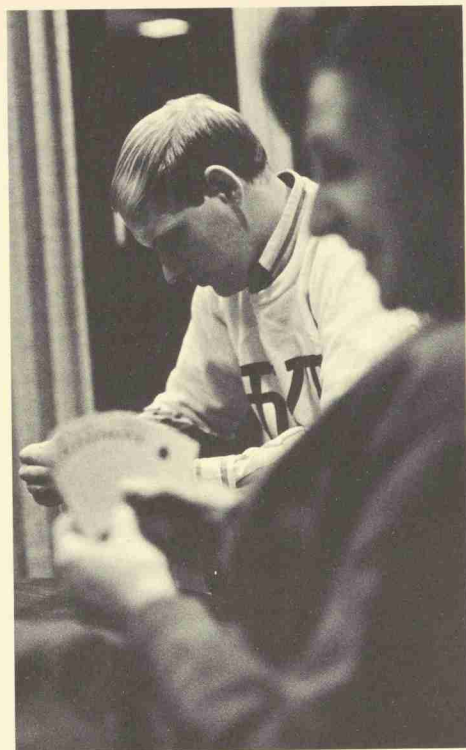

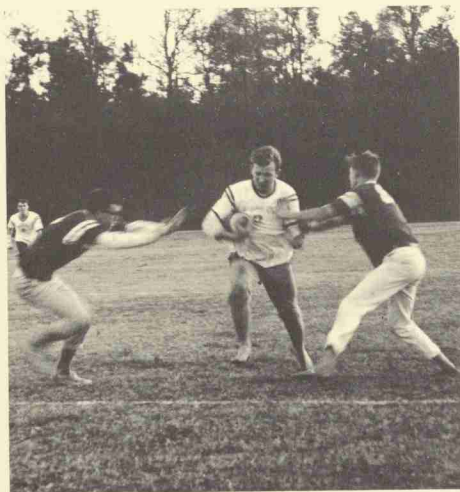

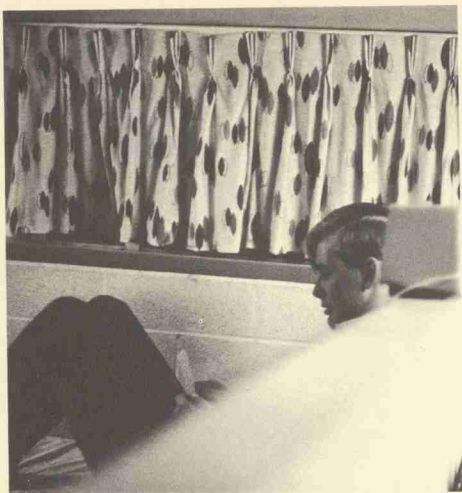

Assorted bugs, dead or dying from asphyxiation, in the closet and in corners.

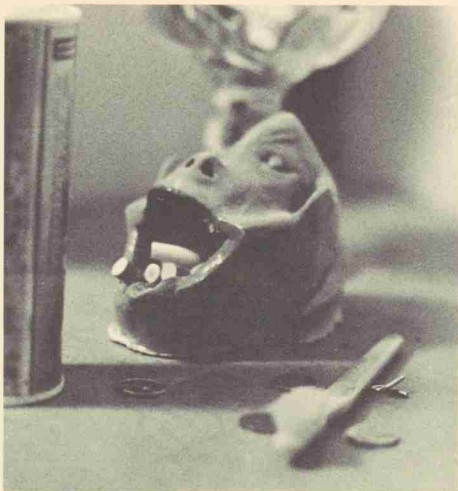

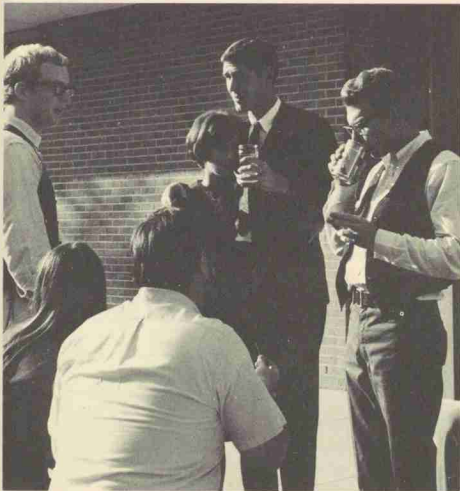

Rooms inhabited by the female of the species are generally not quite as neat.

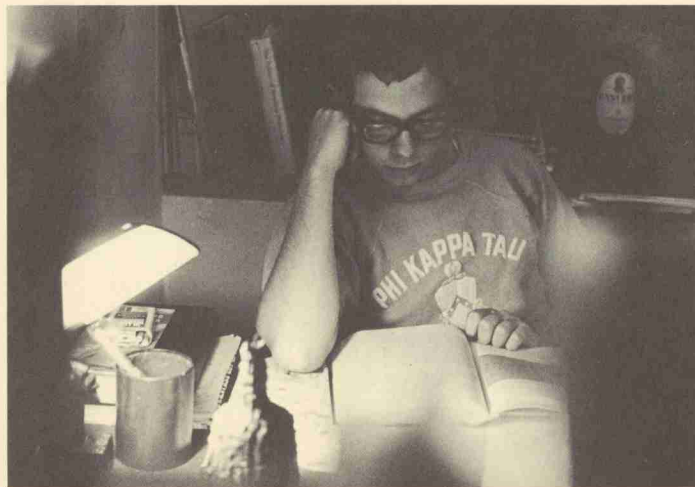

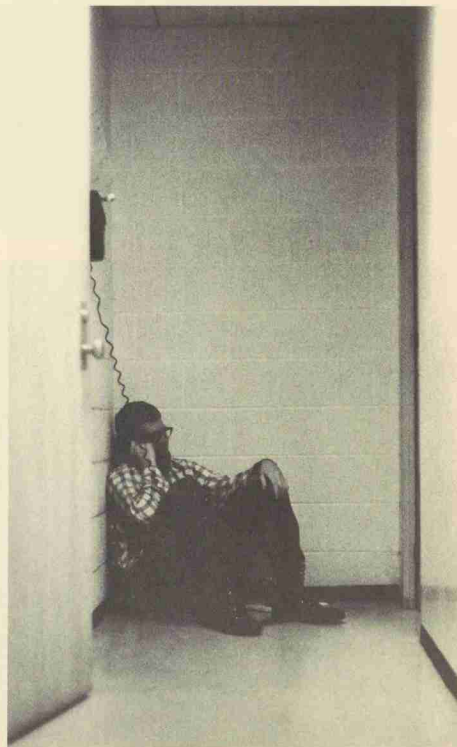

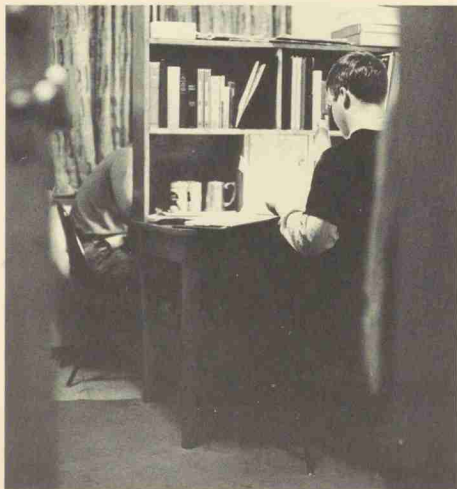

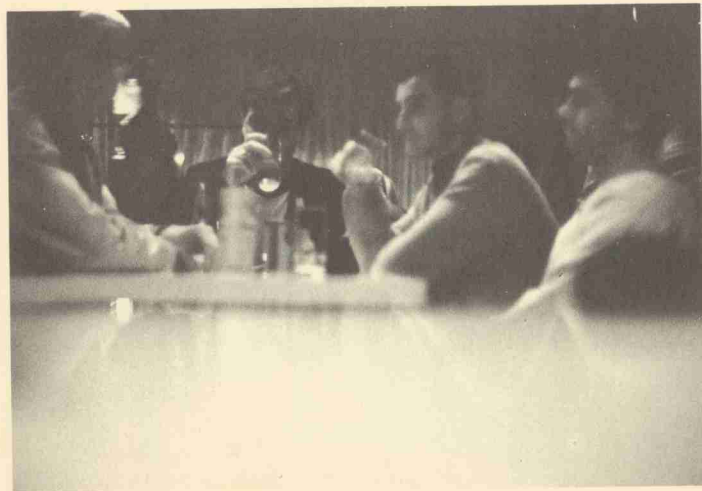

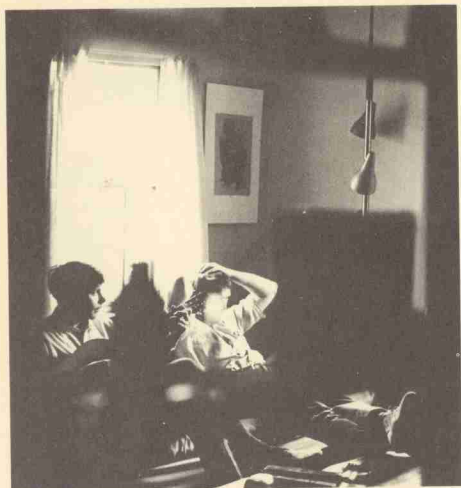

Fraternity life offers the most highly organized environment on campus for those willing and able to channel their every energy into some sort of group effort. This, in fact, is what fraternity life is all about: brotherhood, doing things together. That energy may be directed toward a bridge game or an all-night drunk or a charity or a Pearl Harbor party, but it is always done in unison with one's fraternity brothers.

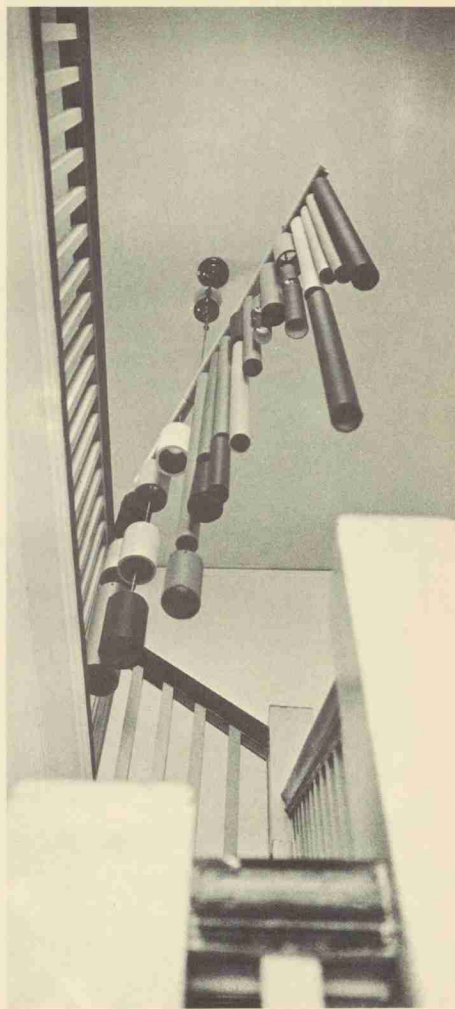

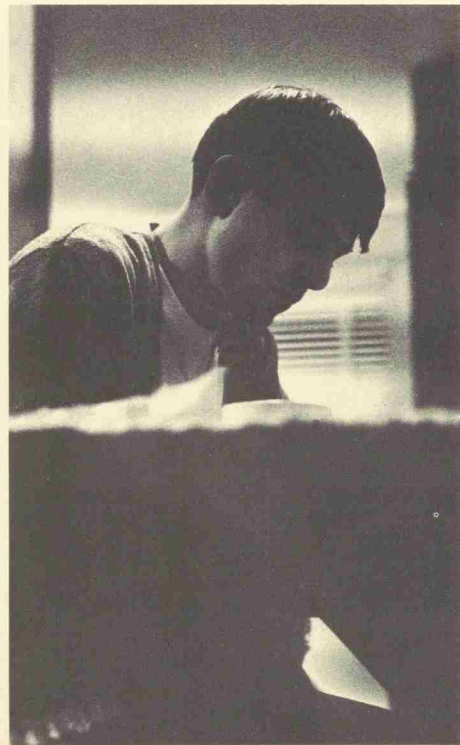

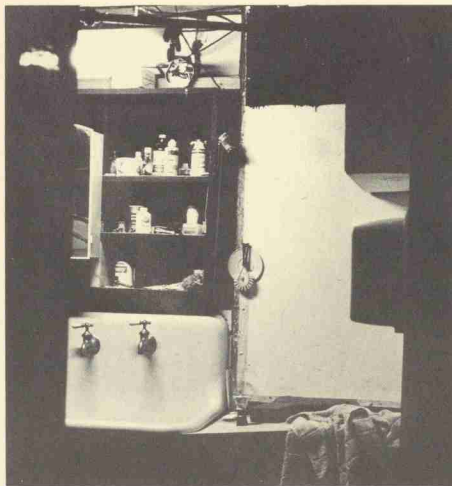

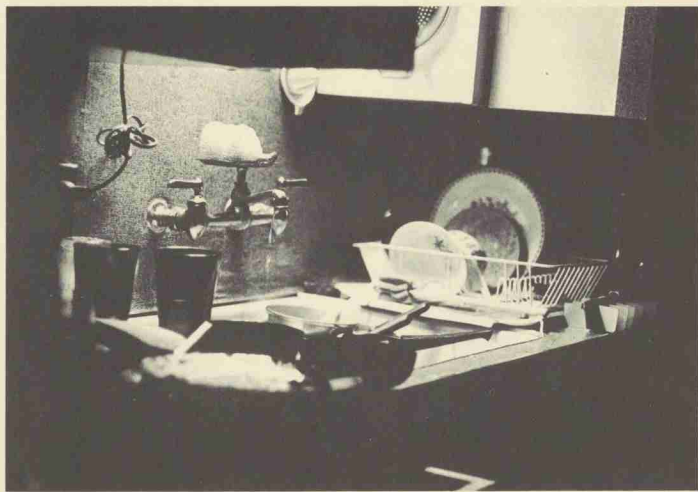

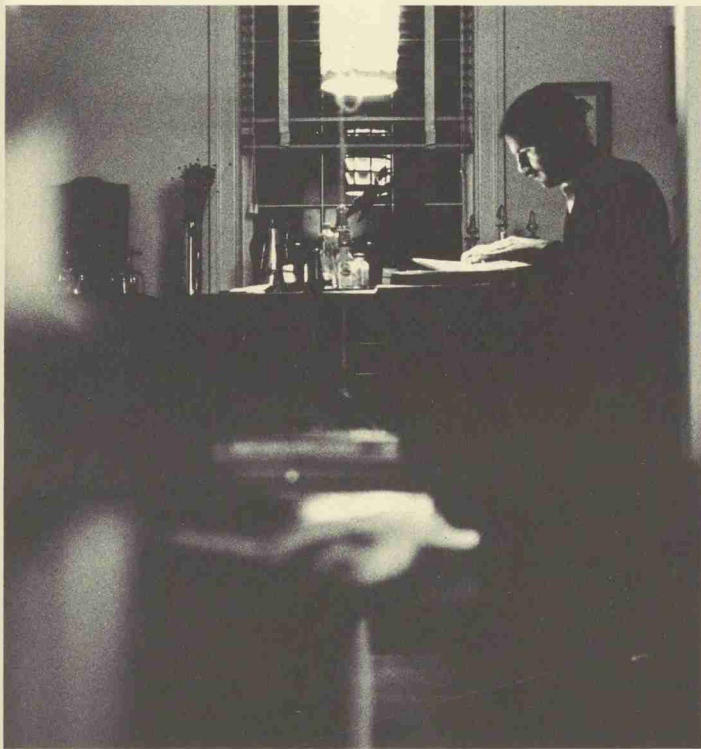

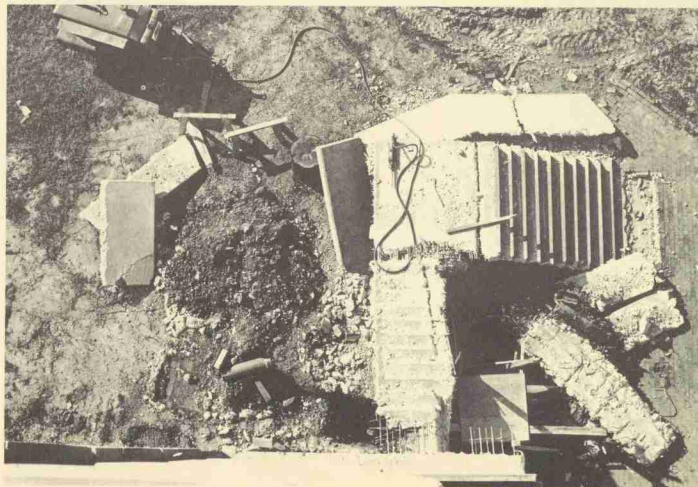

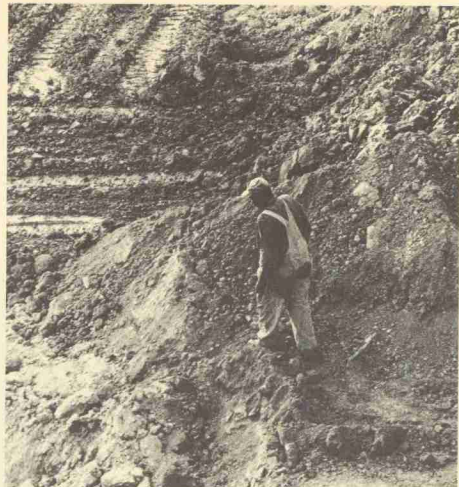

Confused by the labyrinth of a large university campus, many students turn to off-campus housing in an effort to obtain tighter personal control over at least one phase of their environment. The student can obtain a small quantum of seclusion without sacrificing those campus activities in which he desires to participate. The student must prepare his own meals, clear his own dishes out of the sink, take out his own garbage, and get by with only two glasses (his roommates have broken the rest). Above all, he must maintain friendly relations with his little old landlady rather than some impersonal agency of the university.

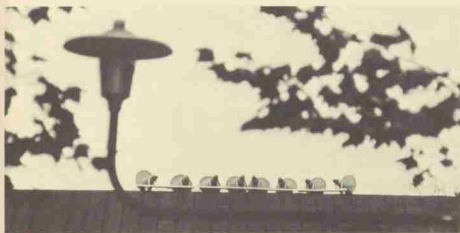

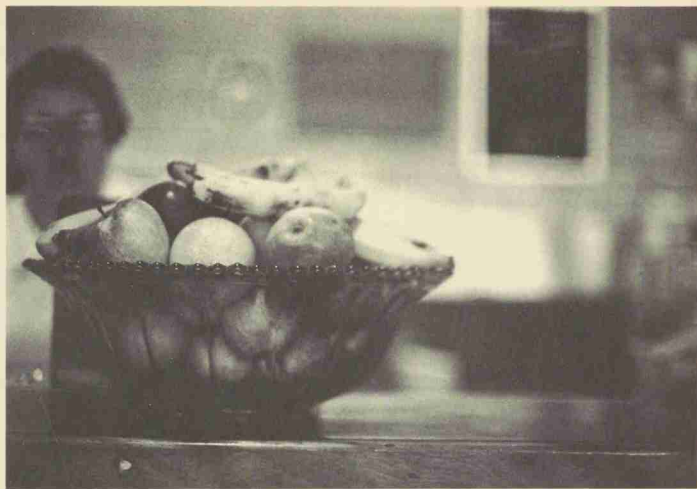

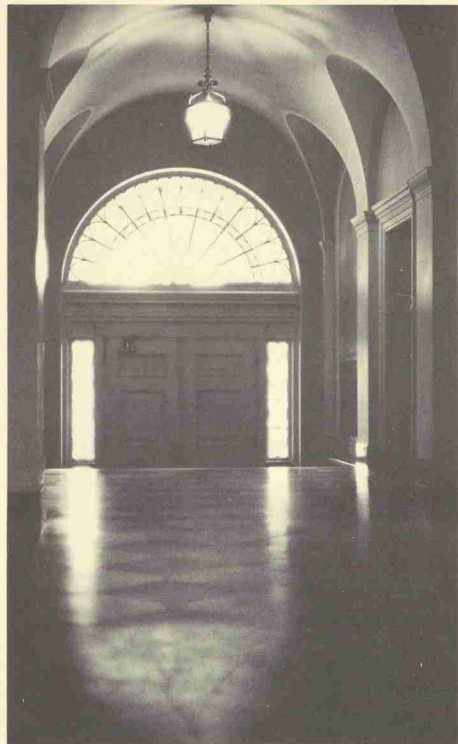

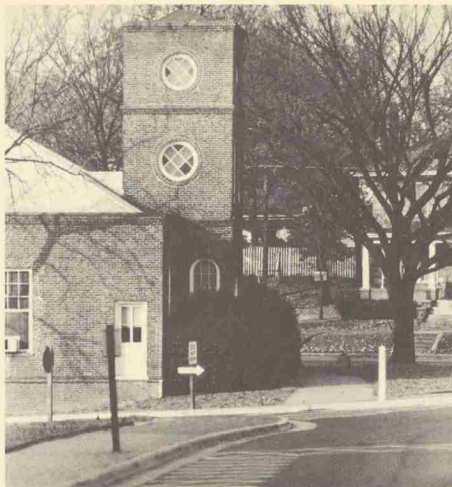

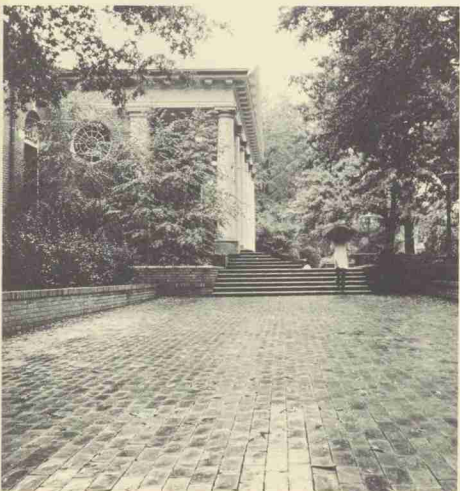

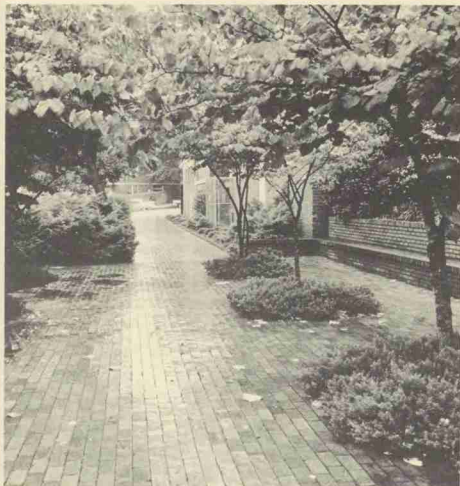

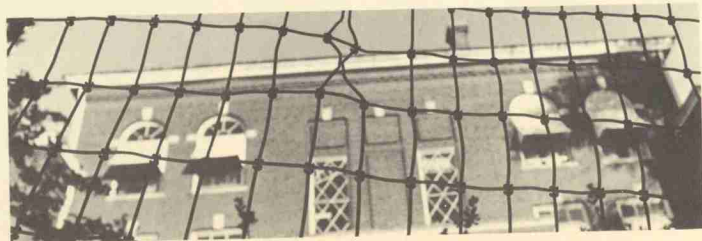

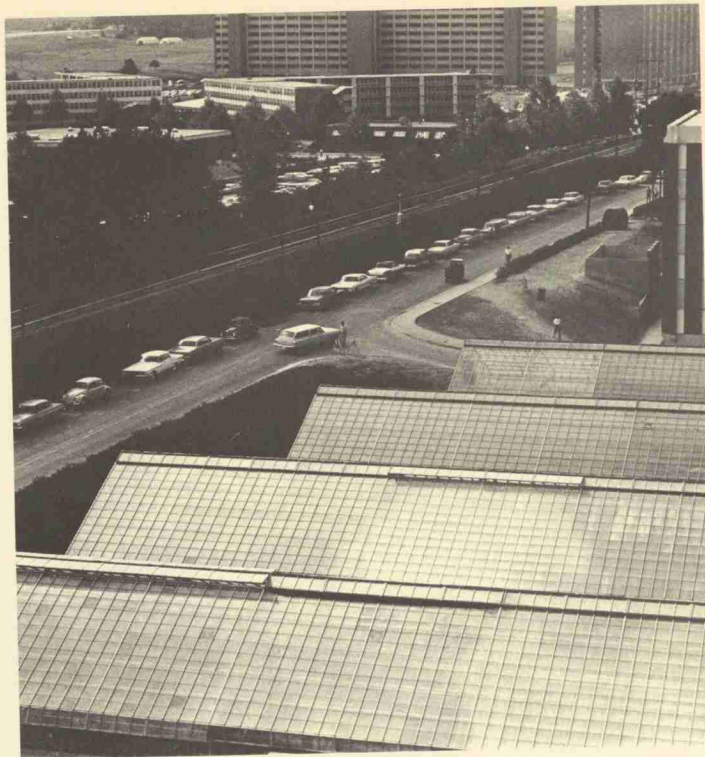

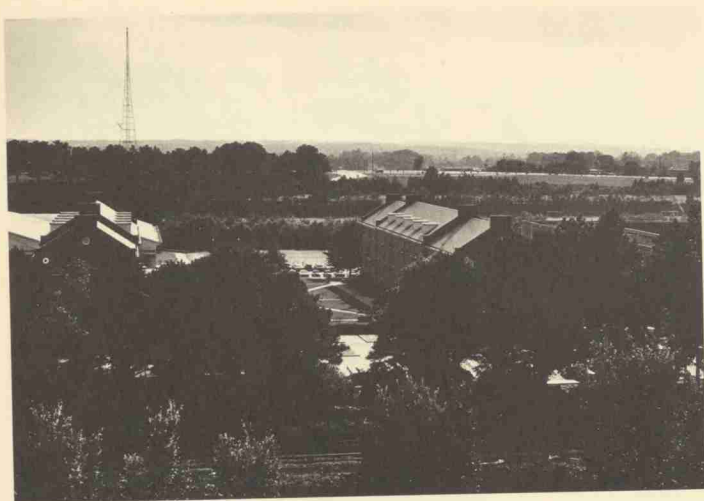

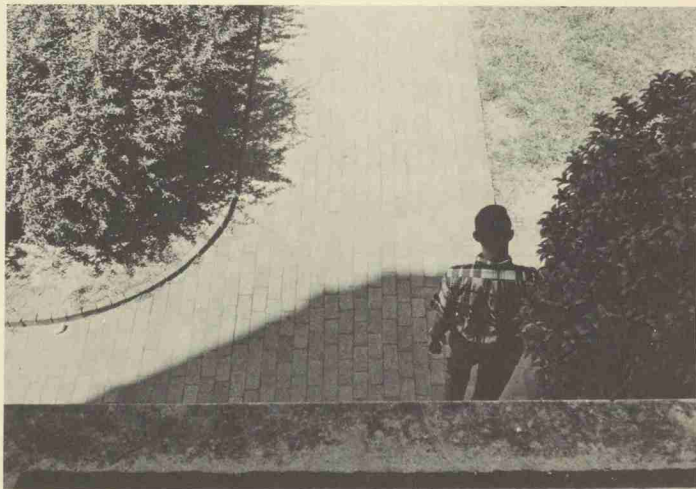

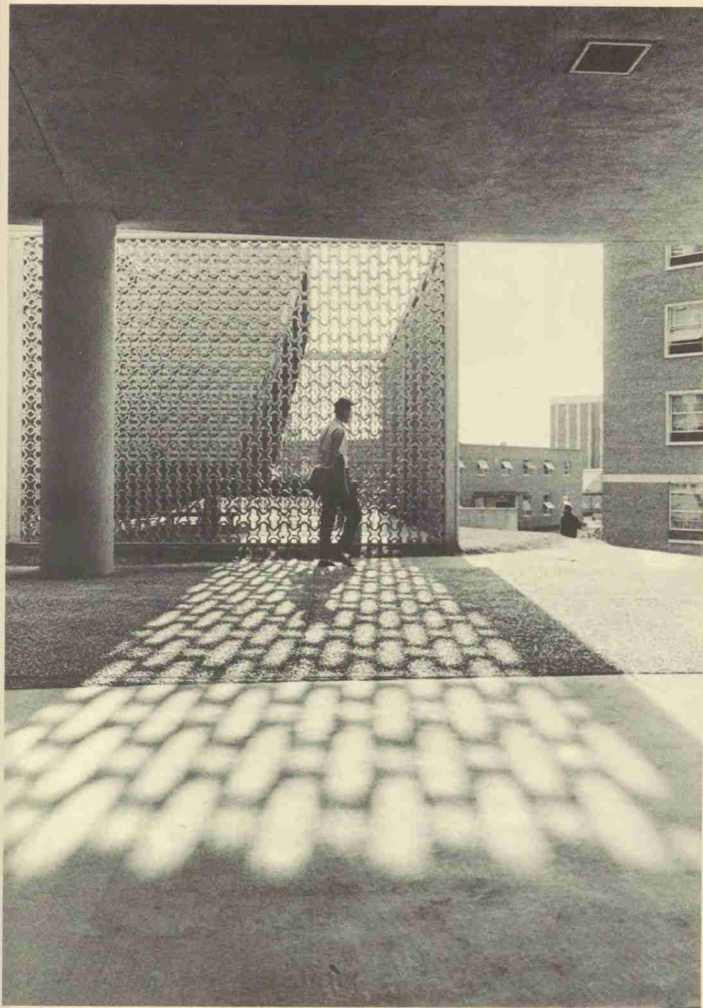

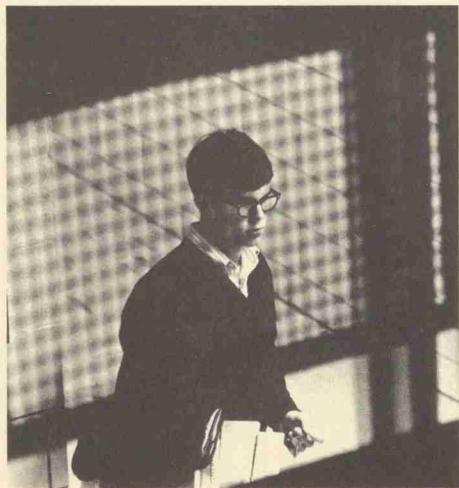

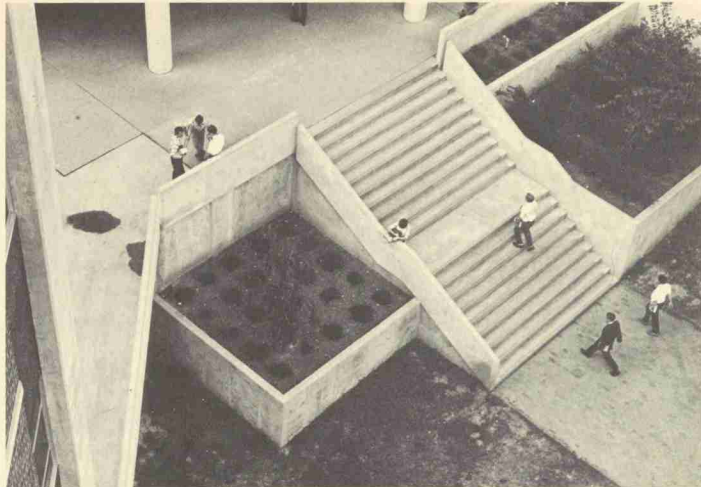

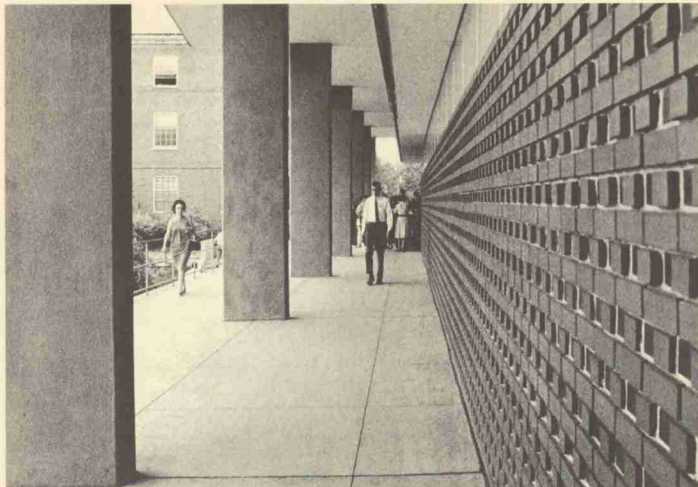

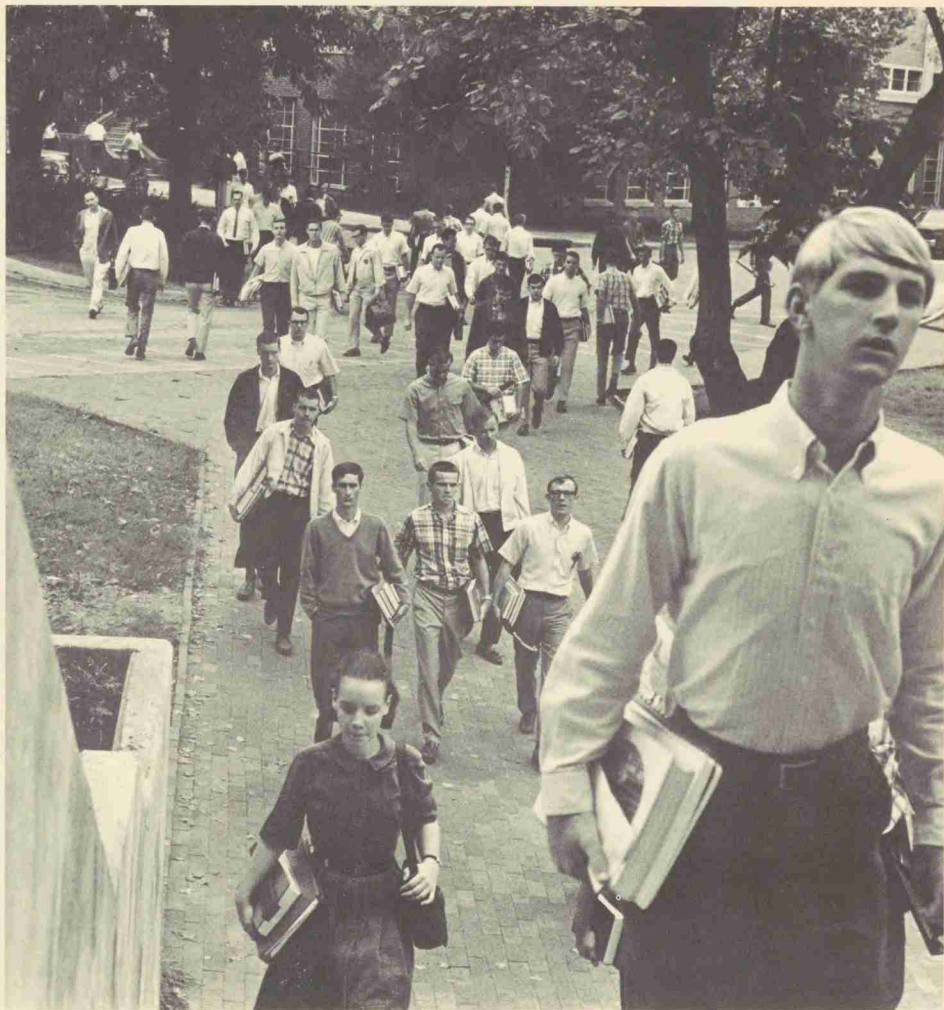

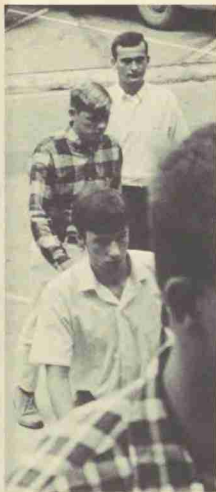

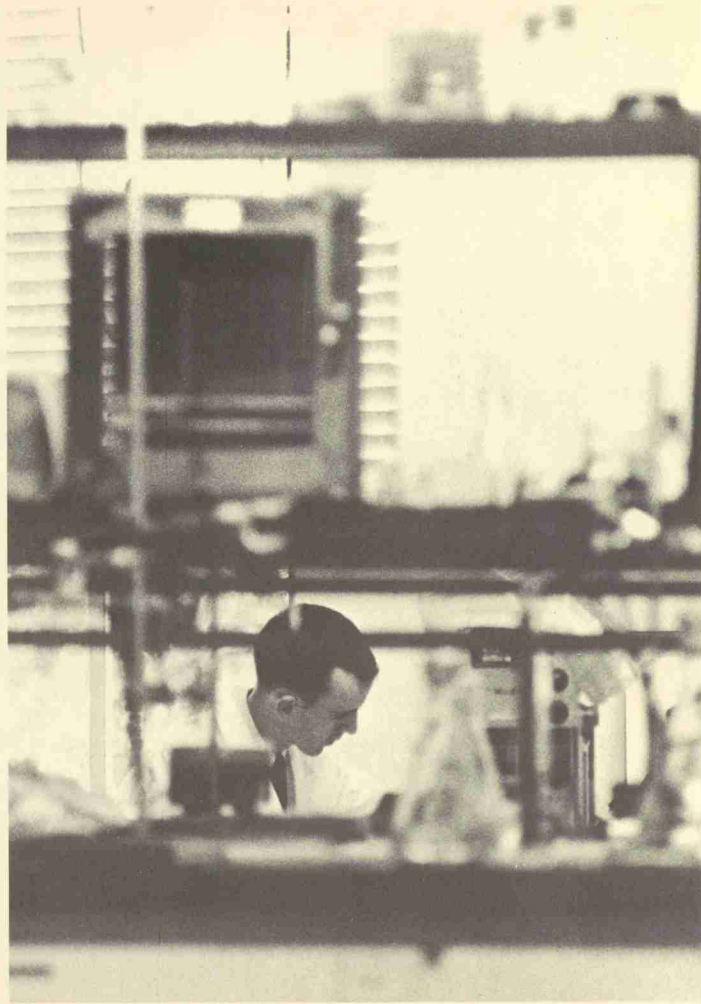

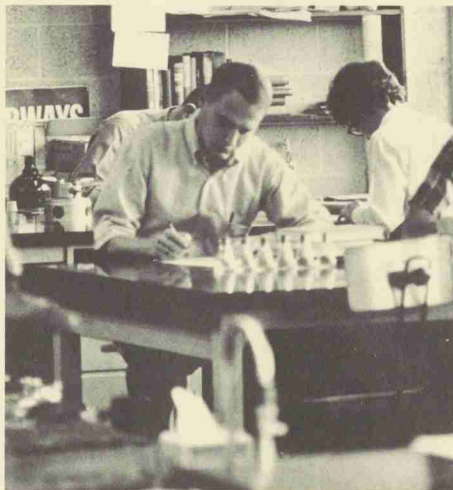

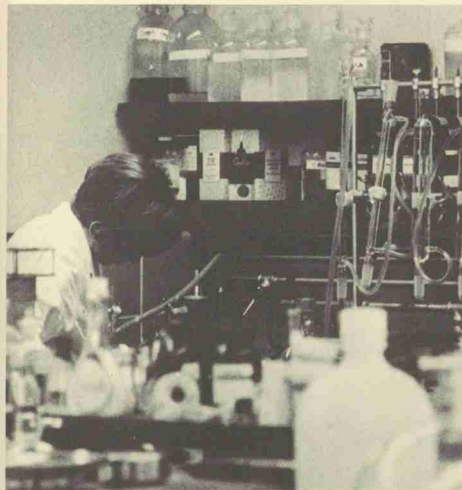

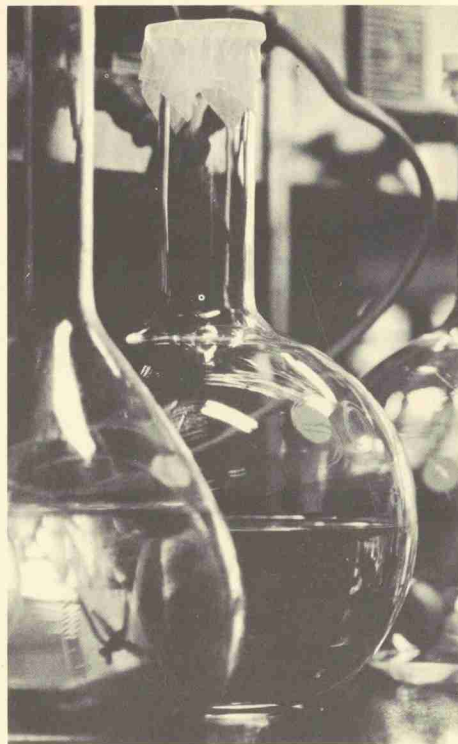

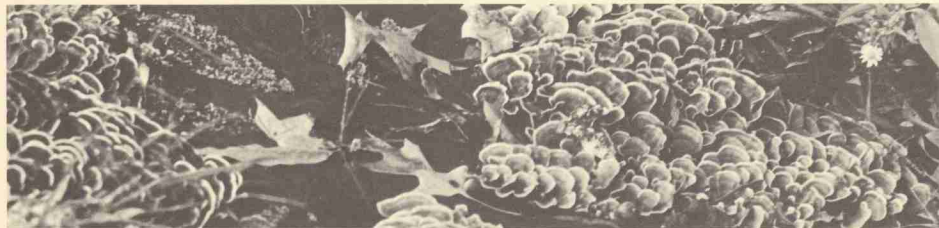

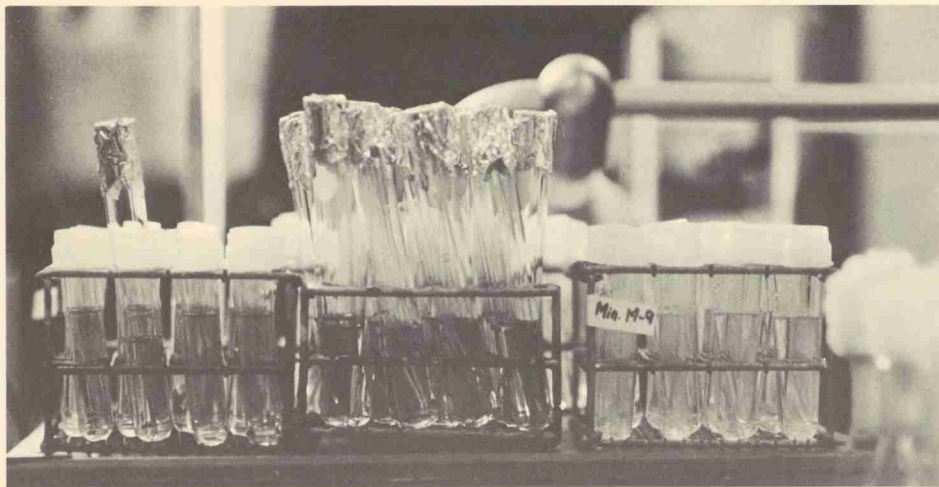

Cows are milked with foam rubber and steel, pigs inhabit sterilized pig pens, and farmers use slide rules to fill out their income tax forms. Modern agriculture is modern. The farmer is no longer just a farmer, but a technician and a businessman as well. Thus a School of Agriculture and Life Sciences is no longer a luxury — it is a necessity.

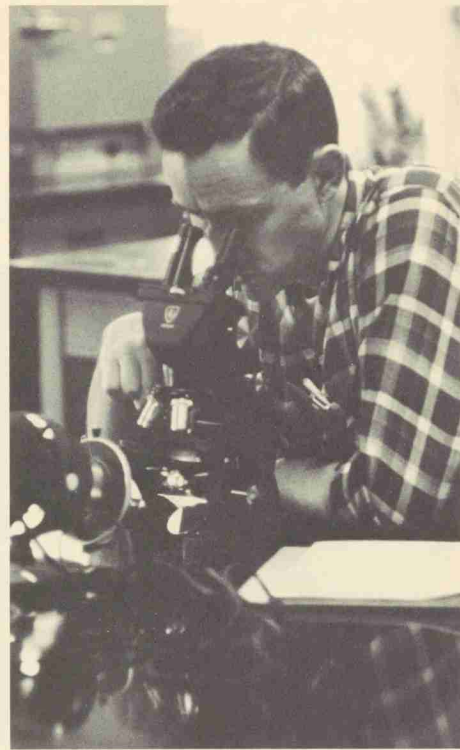

At State students are taught more than how to plant corn or slop the hogs. They learn about chromosomes, genetics, grafting, and the nervous systems of chickens. They learn how to operate and service machines that would dwarf a plow horse. They learn about modern marketing techniques and the new economics. They read Joseph Conrad and write term papers and work quadratic equations. In short, the farmer is no longer a "hick."

Agriculture has more than changed, it has undergone a revolution of titanic proportions. State's Ag School not only teaches its students how to cope with revolution — it teaches them how to help implement it. Within five years chickens may be laying square eggs (easier packaging).

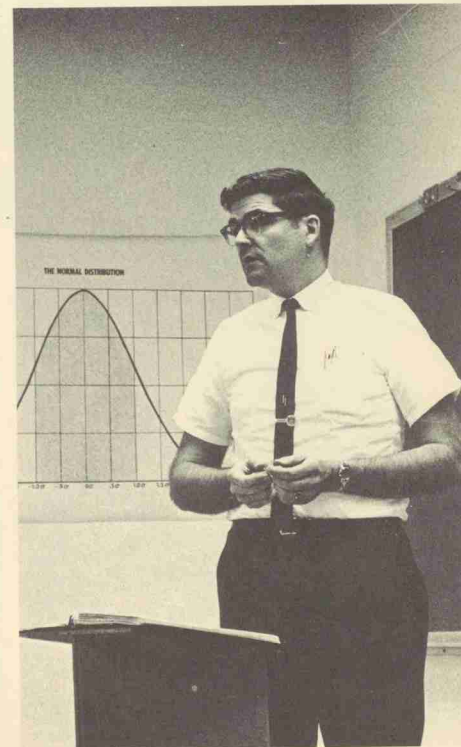

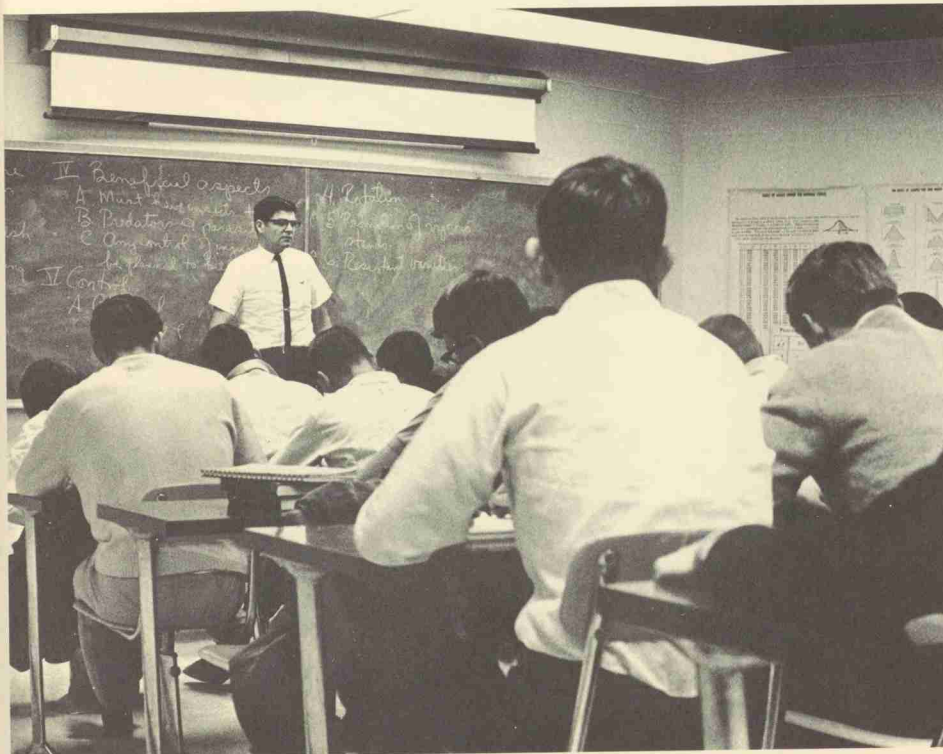

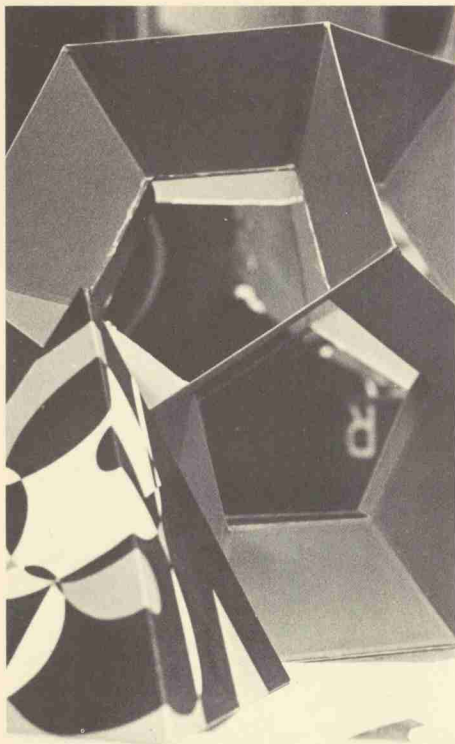

ag'ri·cul'ture

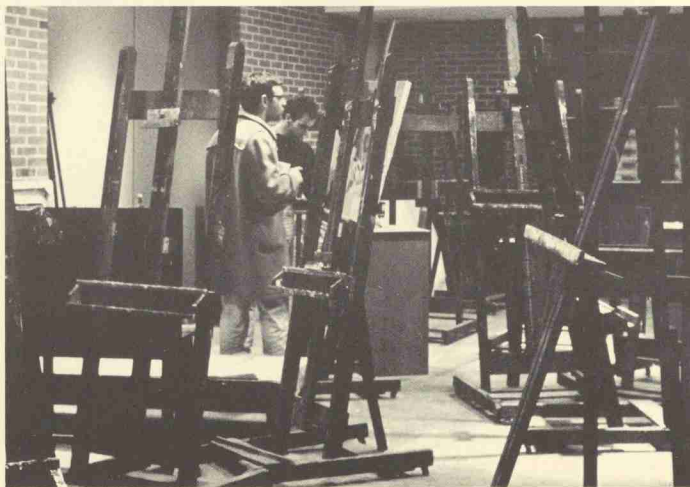

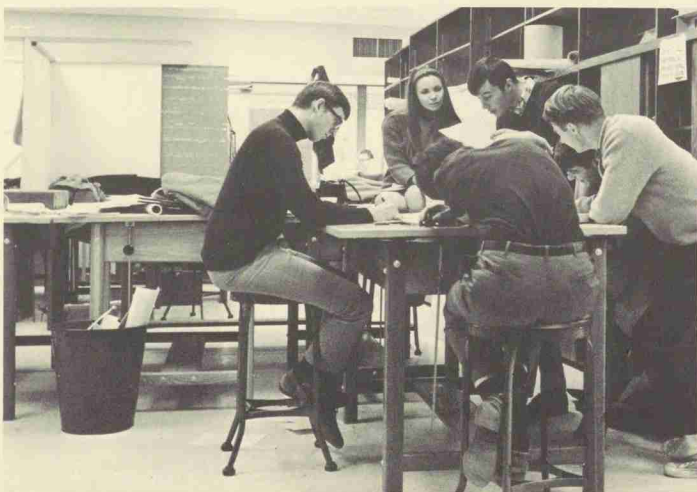

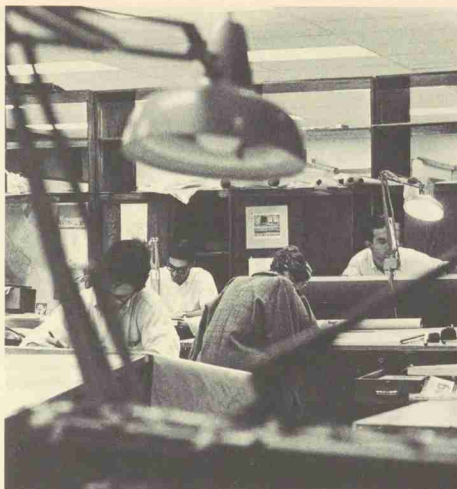

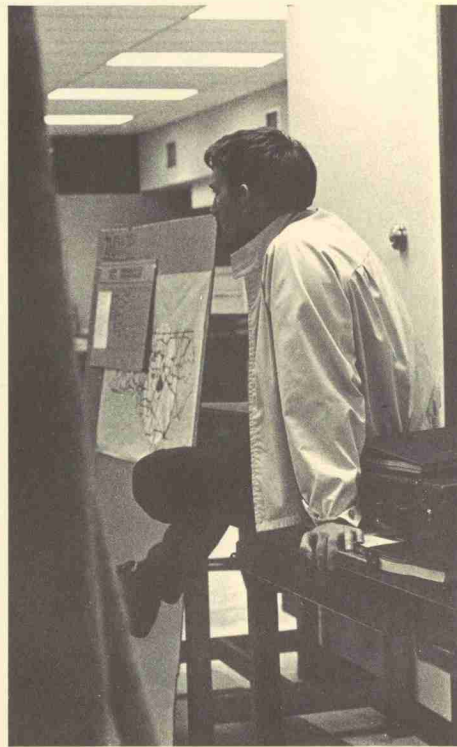

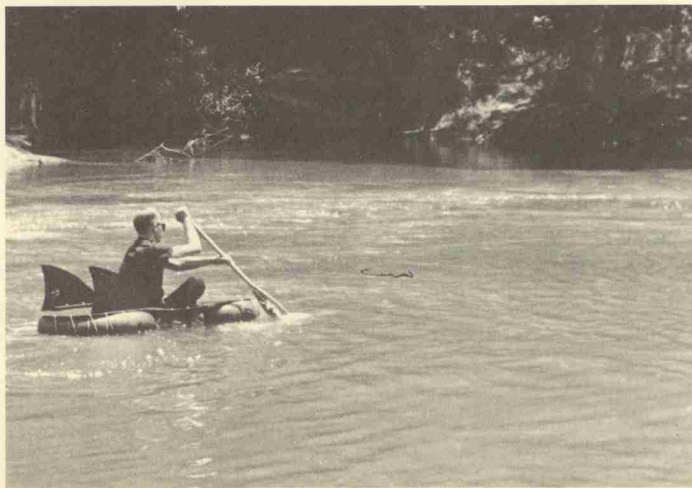

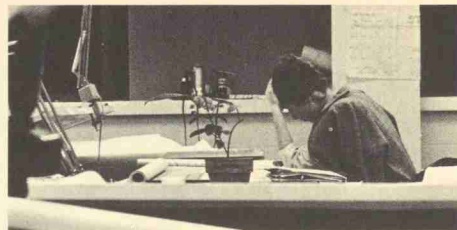

The working environment of a design student is unique. Denied regular working hours by the nature of his work, he compensates by slaving far into the night over a tangled jumble of lines in an effort to meet his project deadline. Denied any fixed standards of excellence, he compensates by creating his own standards, his own blend of form and function.

The result is, hopefully, more original concepts of what the externals of our world should look like. For the modern ranch house and the modern inkwell are both "designs." These concepts will thus apply not only to concrete and steel skyscrapers but to toothpaste tubes, front lawns, automobiles, and whiskey bottles. What the appearance of our world evolves into is the responsibility of the design major.

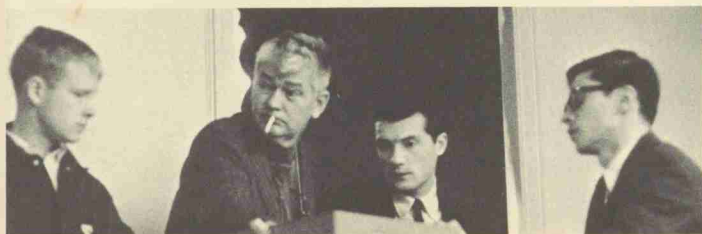

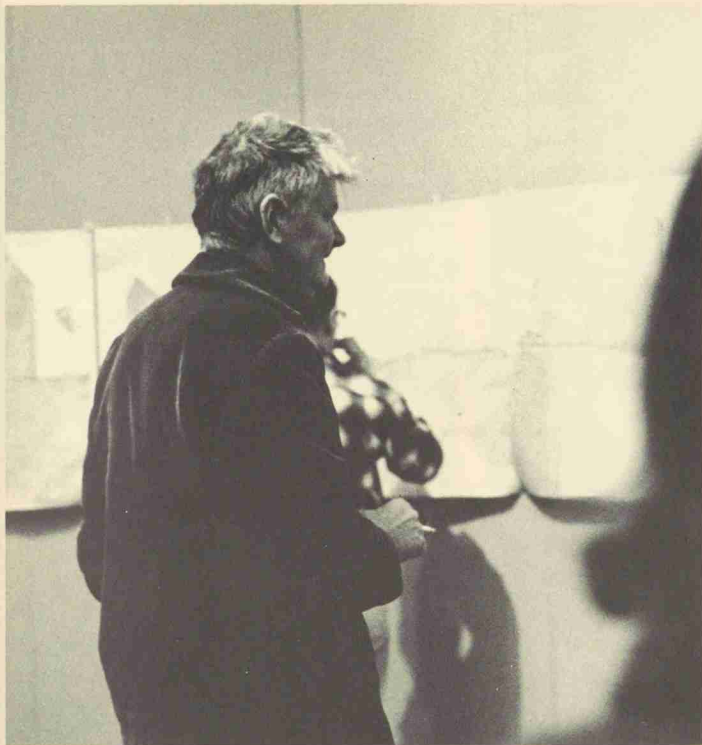

de·sign'

PROFESSOR
DUNCAN R. STUART

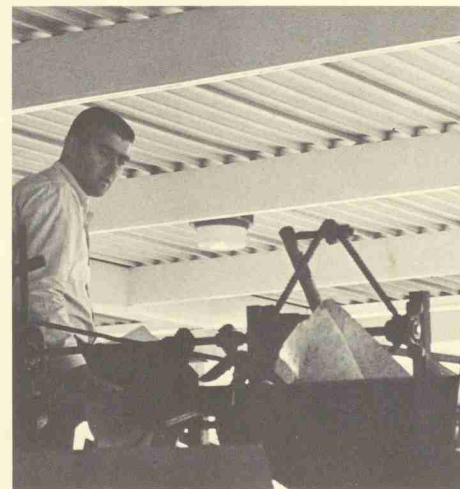

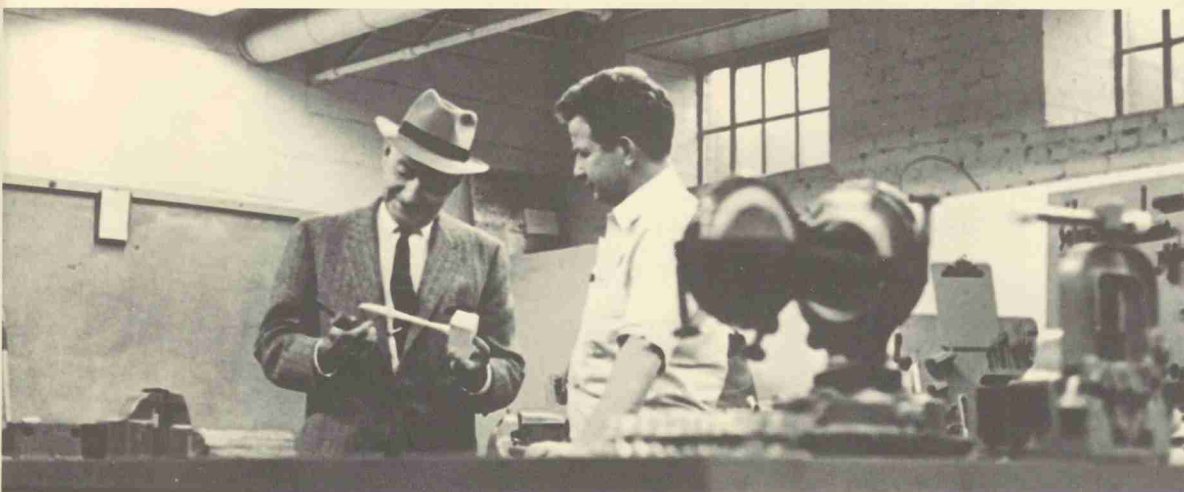

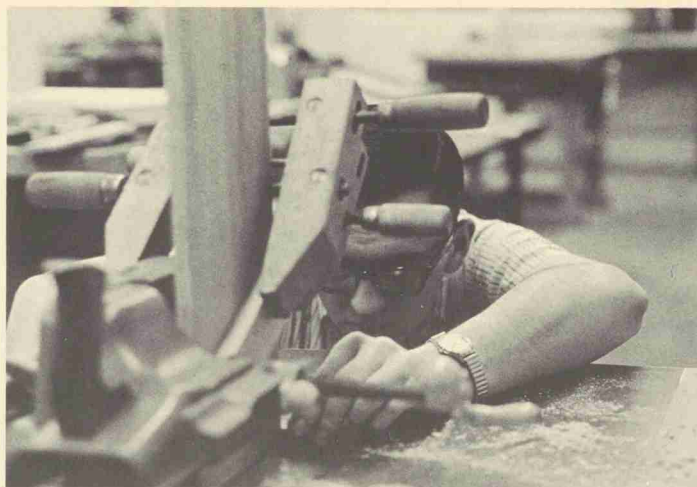

She used to be an old woman with grey hair, thick glasses, and white chalk dust on the seat of her dress. Now "she" may just as well be a "he" (in the case of educational television, an "it").

Her job used to be the teaching of the three "R's" with a liberal dose of old-fashioned discipline. Now she lectures on the quantum theory, Sartre's existentialism, and something called the new math.

The preparation of a "teacher," no matter what shape, size, or color a modern society may impose on her, is the primary purpose behind State's School of Education. It not only offers degrees in such diverse areas as Agriculture, Industrial Arts, and Mathematics, but provides professional education courses for potential teachers in English and Social Studies. It is only a matter of time before knowledge is injected into people with a hypodermic at birth, but until then such institutions as the School of Education will continue to be needed.

ed'u·ca'tion

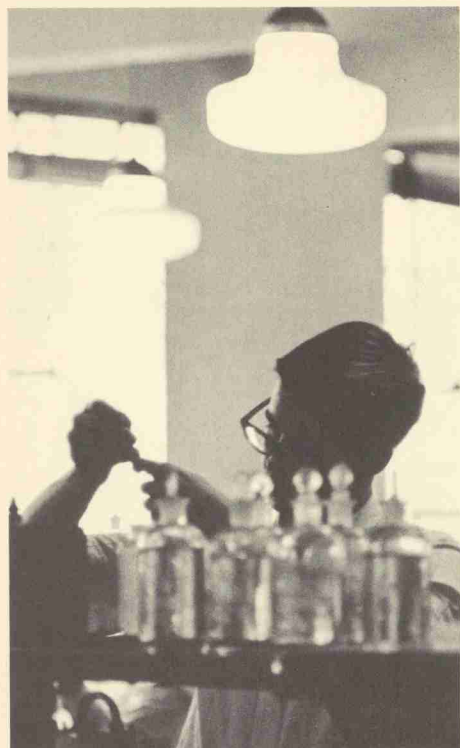

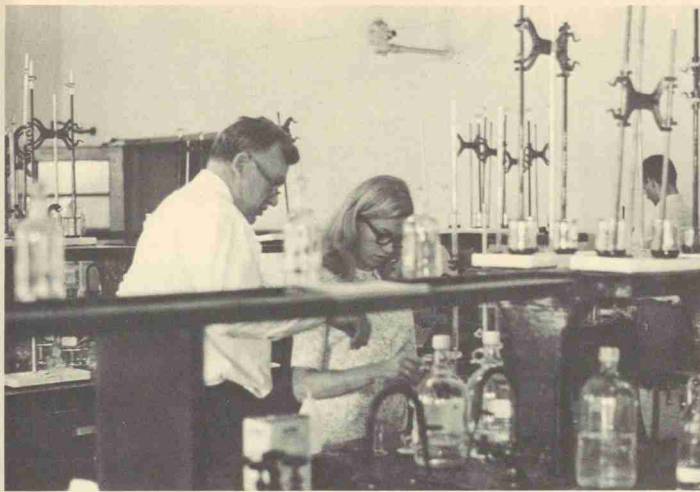

DOCTOR
NORMAN D. ANDERSON

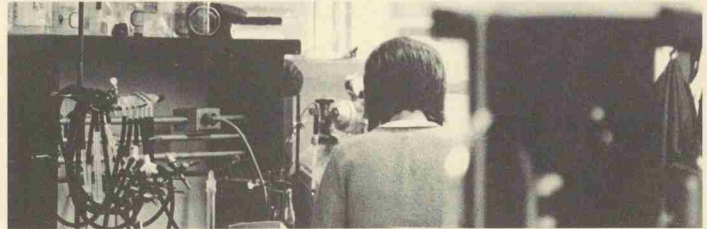

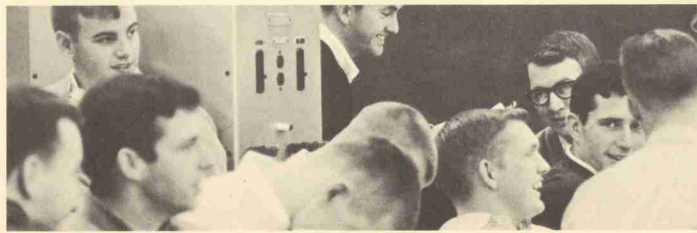

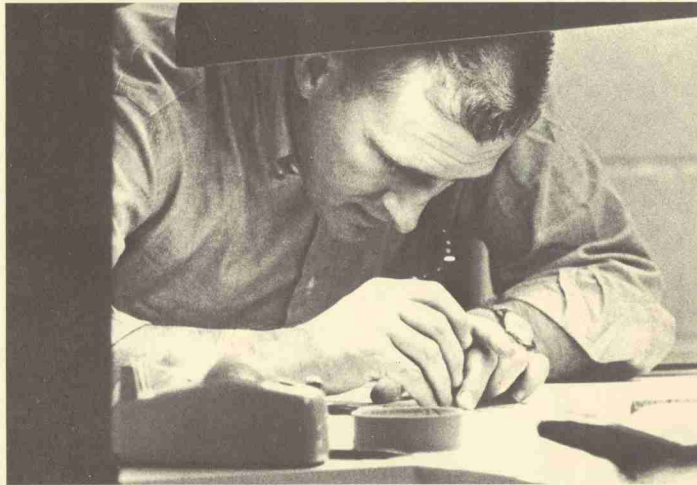

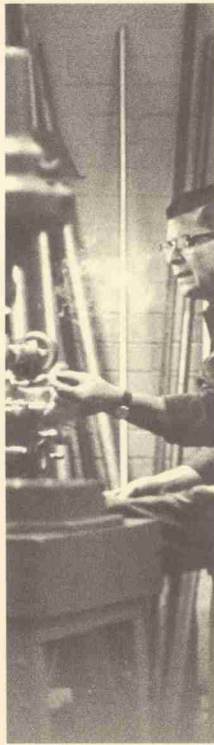

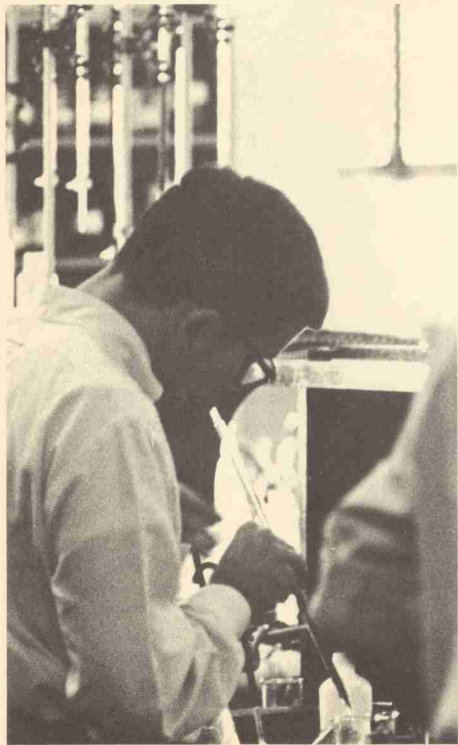

The engineering freshman enters into a world of almost terrifying complexity, a world of test tubes and wires and atomic reactors. He discovers that he is expected to be a virtuoso in a dozen different fields of study, mastering equations, theories, charts, and metals. Two plus two may no longer equal four; water is no longer only water but a precise blend of hydrogen and oxygen.

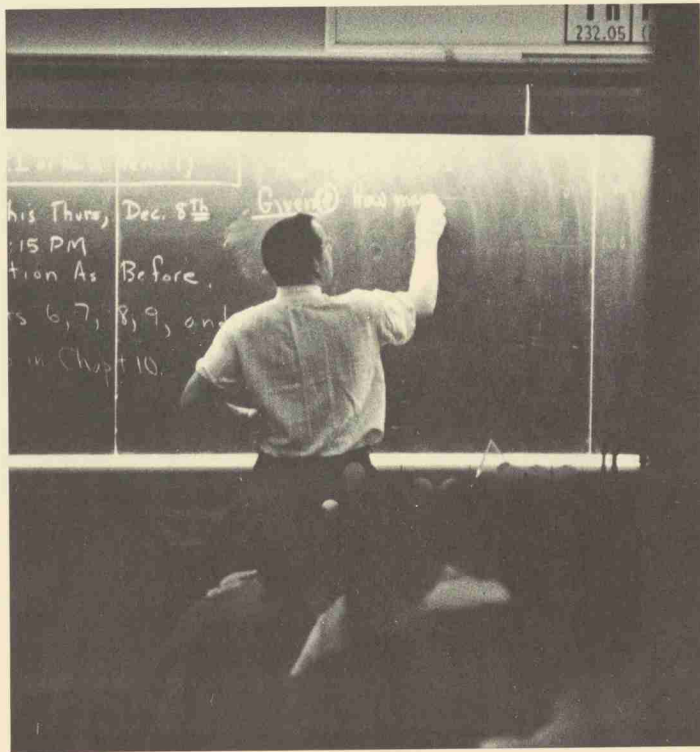

Once he leaves his freshman year behind him, he must choose between nine different departments, some of which didn't exist five years ago. The work load never lets up, if anything it becomes more demanding, more exacting. In the next three years he is expected to absorb generations of knowledge; knowledge that may be made obsolete by next week's technical journal.

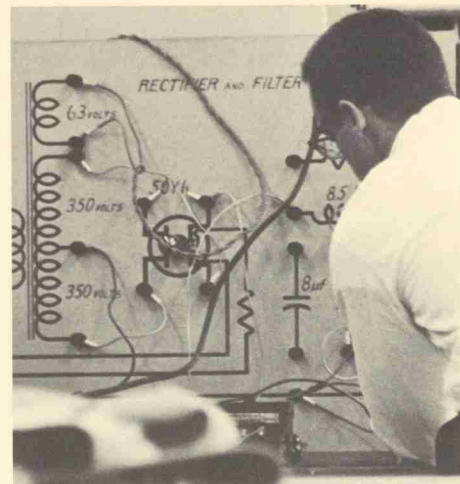

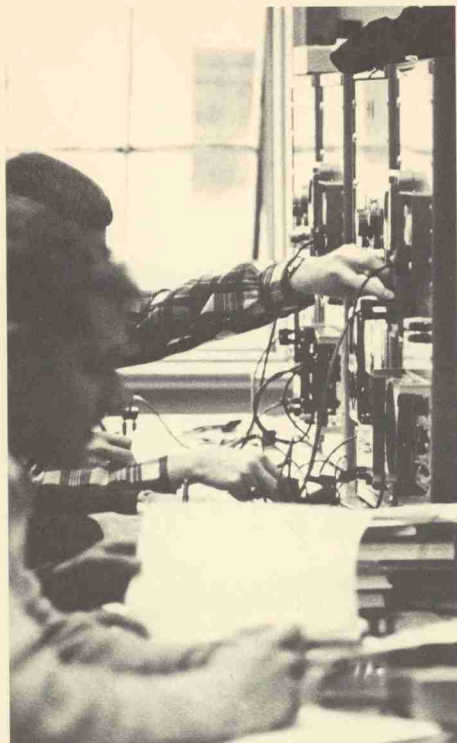

The result, the end product, is the Engineer. The School of Engineering at State is one of the country's major source for high quality engineers, the men who, for better or worse, are responsible for lifting the world out of the dark ages. The engineer has put the horse to pasture, the airplane in the sky, and the television in the living room. He has created the atomic bomb and the electric toothbrush, the hydrofoil and the tin can.

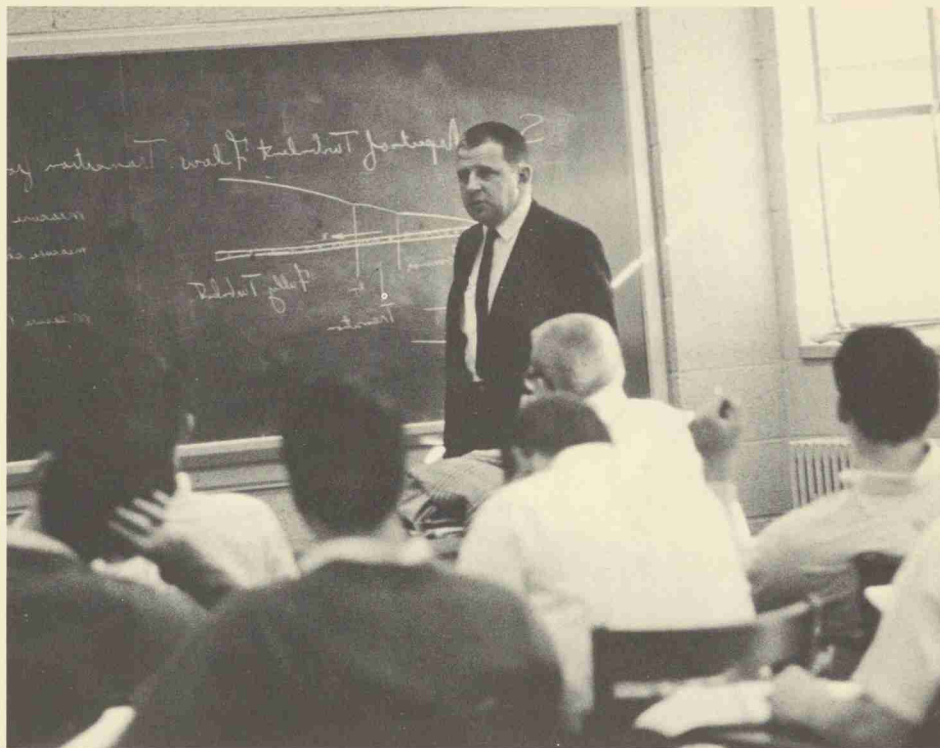

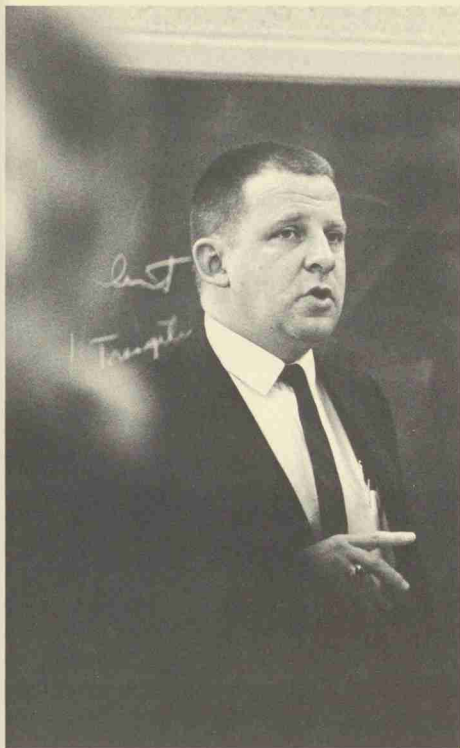

en'gi·neer'ing

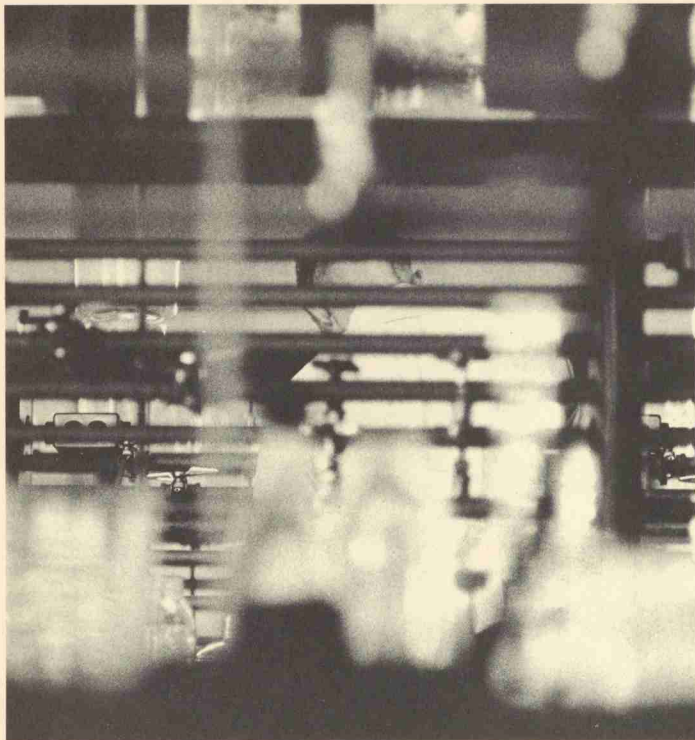

DOCTOR
JAMES C. WILLIAMS, III

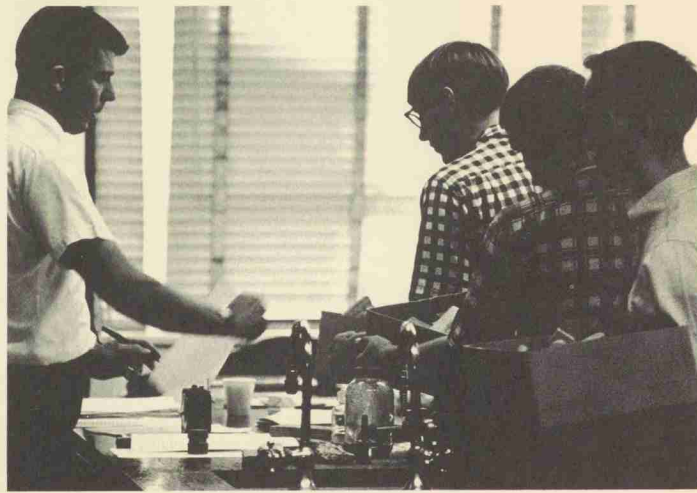

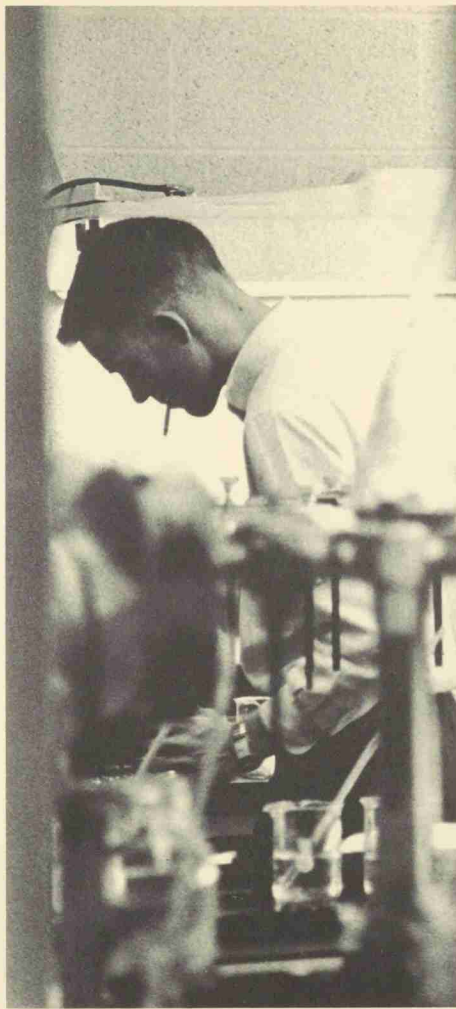

Forestry has been a subject of major concern in recent years, for our timber resources are dwindling at a rate inversely proportional to our growing need for them. The job of controlling this highly unfavorable ratio is near the top of the list for graduating forestry majors.

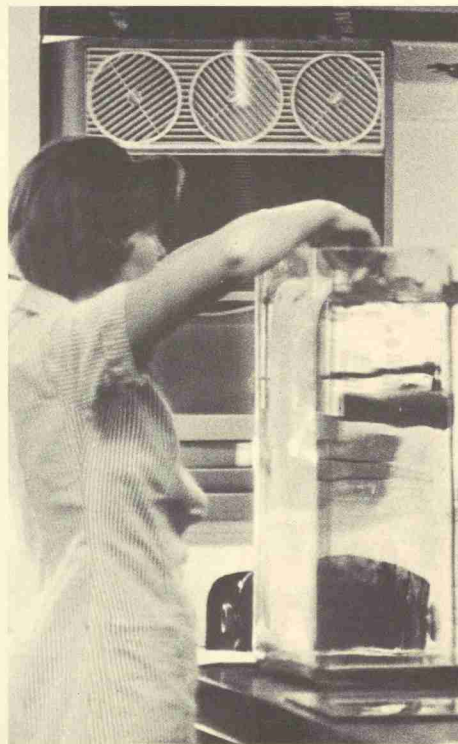

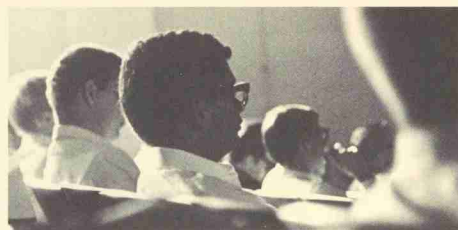

Yet the management of all those leafy-green trees demands more than an overgrown Boy Scout with a Bachelor of Science degree. Forestry, like so many other formerly simple things, is now a science. Once the trees leave the forest the emphasis shifts to pulp and paper technology, an important portion of the forestry program at State.

But the job is not ended here. Forestry majors soon find that they must also study insects, soils, economics, physics, chemistry, mathematics, and maybe a few basic English courses.

for'est-ry

DOCTOR
ARTHUR W. COOPER

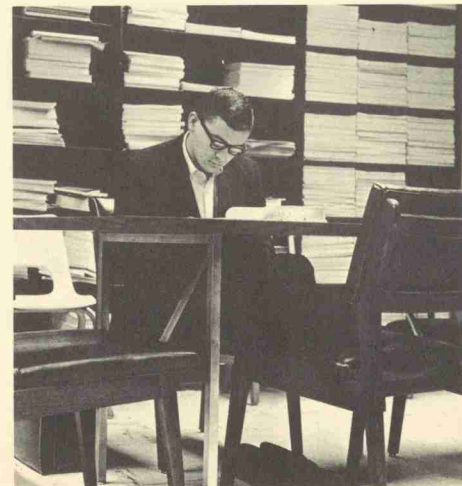

Behind a facade of tired old jokes and instant put-downs, the School of Liberal Arts has been rapidly growing in both quality and quantity. Already the third largest school on campus, courses are constantly being added which offer both variety and challenge. Its professors certainly equal in quality, if not reputation, those at more venerable institutions (even this qualification is only a fast disappearing generalization). The Liberal Arts Council has proven itself to be a vital (and controversial) segment of student government. Graduate programs are being instituted in some areas and expanded where they already exist.

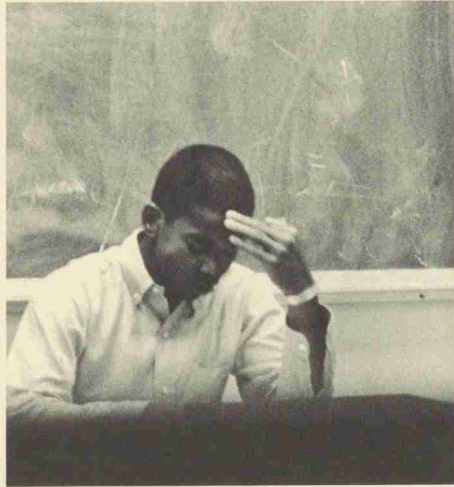

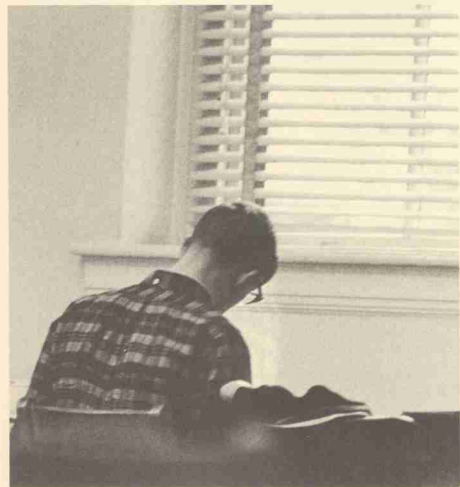

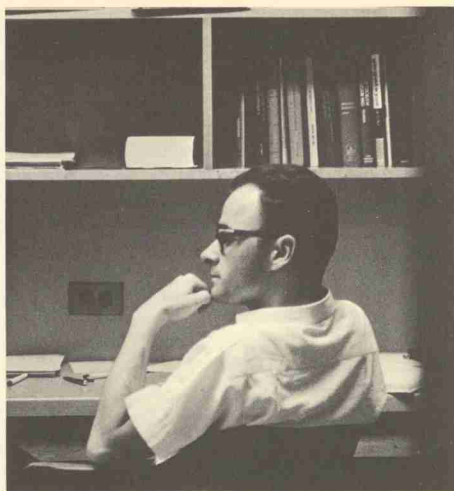

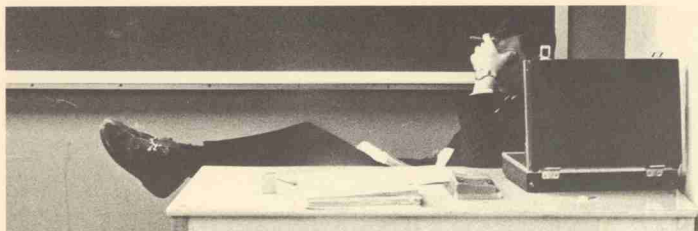

Yet the Liberal Arts School is not just an entity unto itself but an integral part of the improving cultural atmosphere of the university as a whole. A math major with a strong interest in English history can find courses which strike his fancy, while a physics major may want to learn more about Shakespeare.

The Liberal Arts School is no longer an enigma or an unknown quantity. It is making its presence felt.

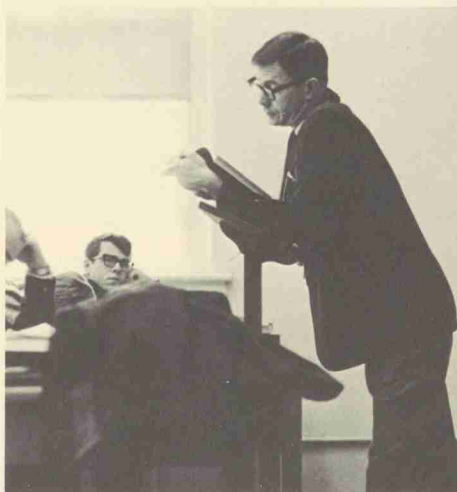

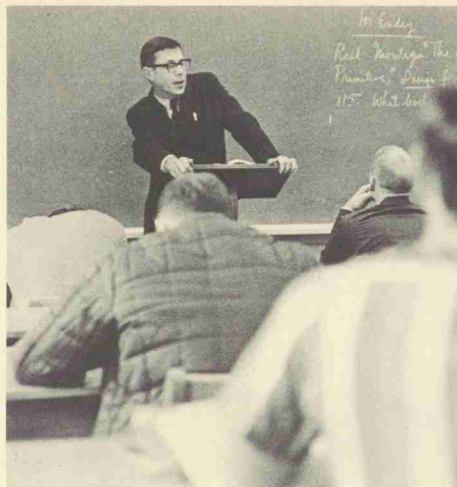

liberal arts

DOCTOR
HERBERT G. ELDRIDGE

Once upon a time, when the world was still flat and at the center of the universe, science and mathematics were toys that poor philosophers played with.

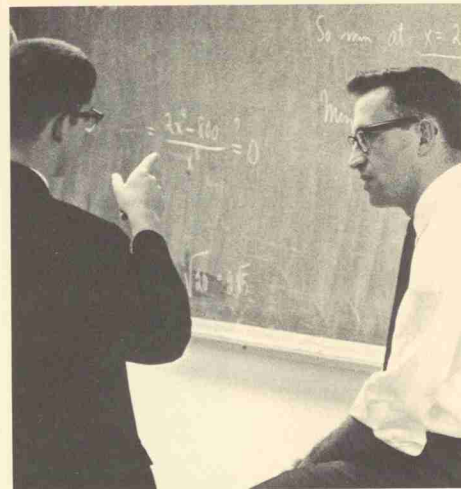

Now, when the world is no longer quite as flat or as self-important, science and math are no longer toys and the men who play with them are no longer poor.

State turns out a high number of this new breed of scientists and mathematicians. The best of them can expect challenging jobs and high pay. Yet, strangely enough, no one enters these fields for a fast buck, for they demand a high degree of interest and ability; physics, chemistry, and calculus don't fit in with anyone's idea of what a crisp course should be. Thus the caliber of those who choose to enter this area is high; the caliber of those who survive it is even higher.

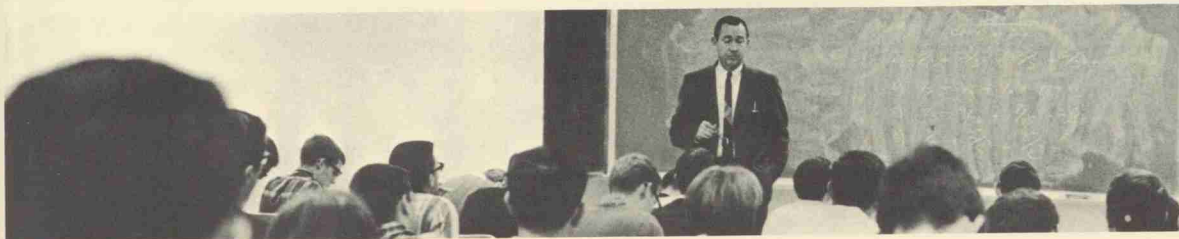

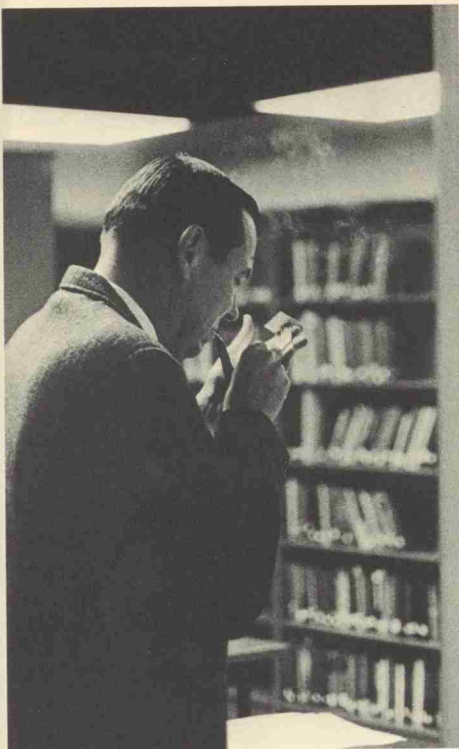

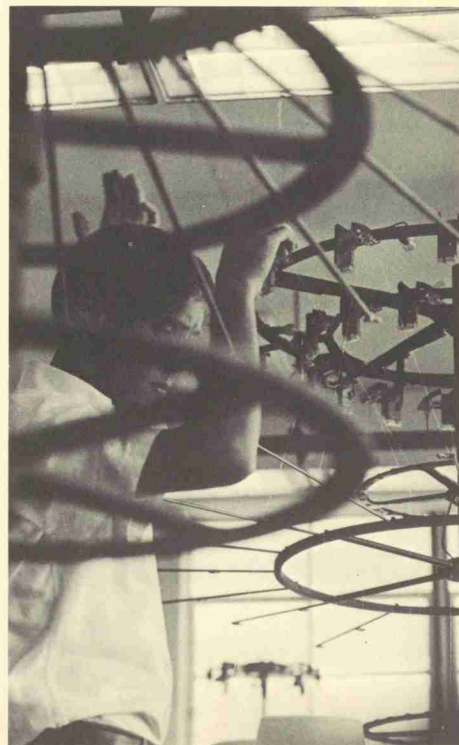

phys'ics and math

PROFESSOR
HOWARD A. PETREA

With the possible exception of a few cannibals in the jungles of New Guinea and a few headhunters along the upper reaches of the Amazon, textiles are one of the most needed products in the world today. The more sophisticated cannibals and head hunters who inhabit the United States are no exception to this rule.

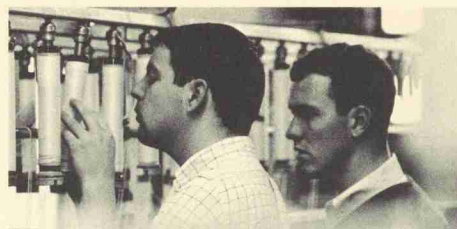

North Carolina is one of the nation's leading states in this field: cotton, wool, and about fifty miracle synthetic fabrics are all produced here. The demand for technicians is understandably high. It is a demand the School of Textiles constantly strives to meet.

Yet the actual study of textiles is not confined to the operation of a jet-age version of the spinning jenny: like all the other students at State, the textiles major must learn to cope with the sciences and humanities. He must also, inevitably, channel his work into one of three areas: fiber and yarn technology, knitting technology, and textile chemistry.

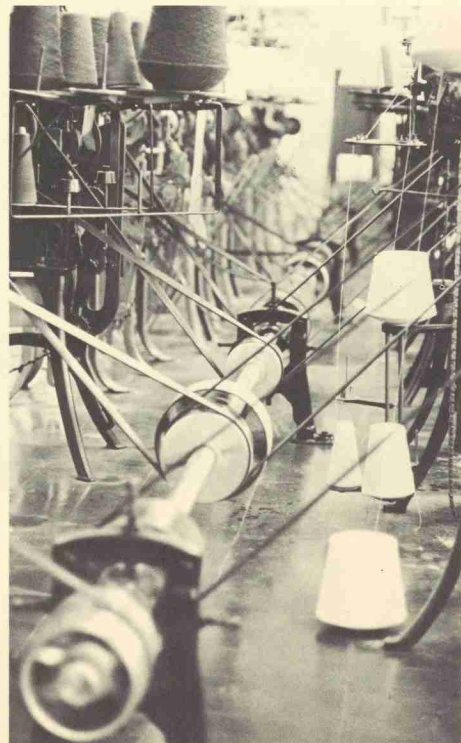

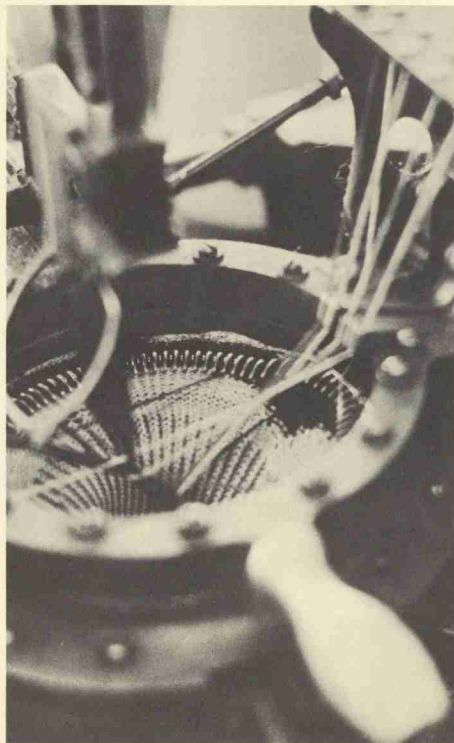

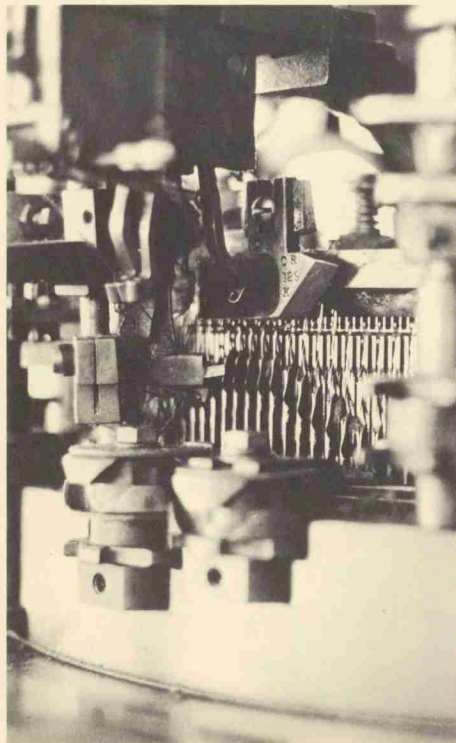

Granny, with a wooden spinning wheel, has been replaced by a technician with a stainless steel whatchamacallit. Granny has been put out of date, but as long as she has her mini-skirt and bikini she doesn't seem to mind.

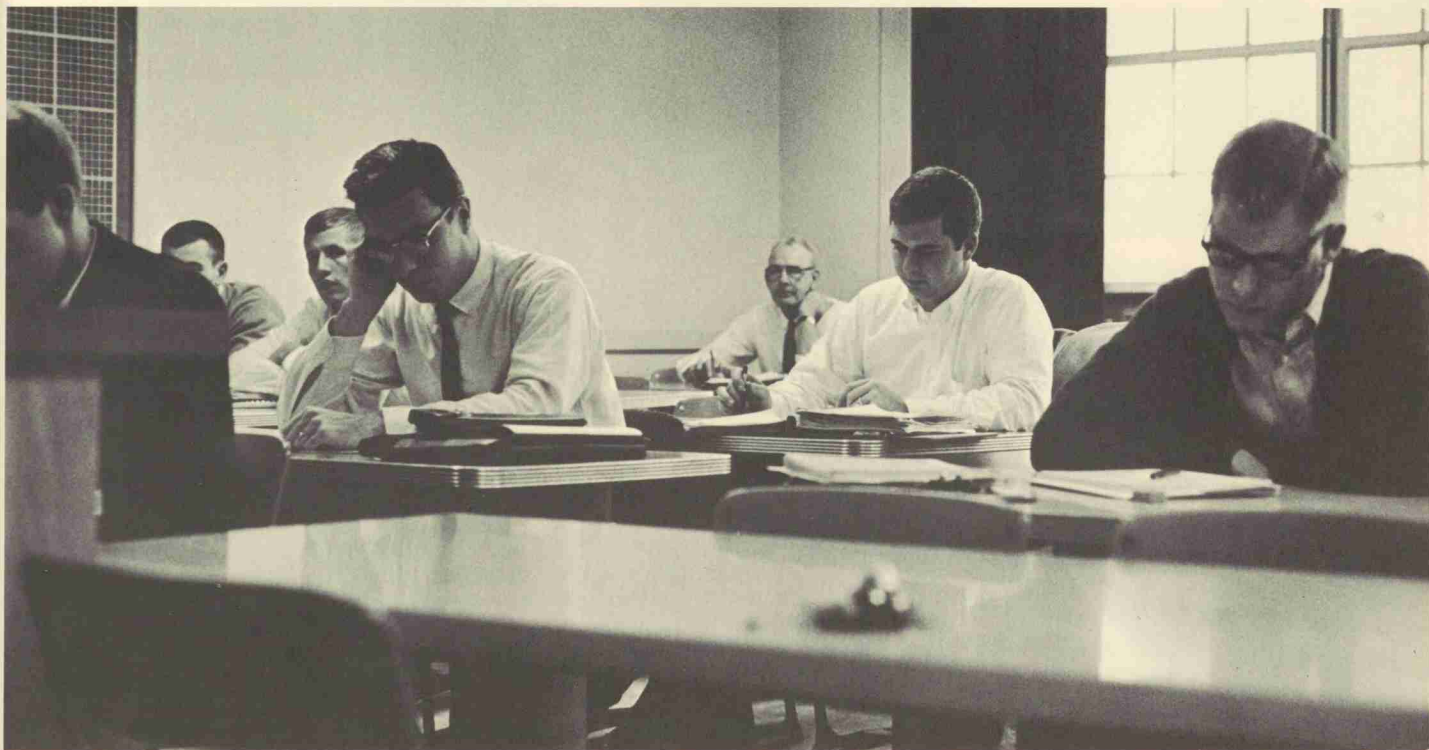

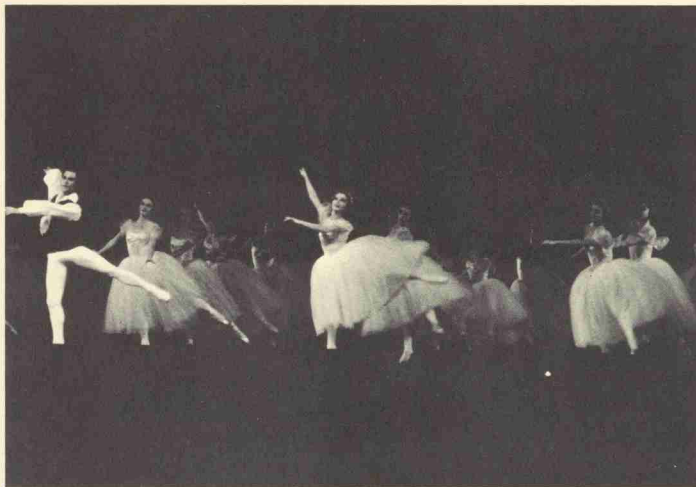

tex'tile

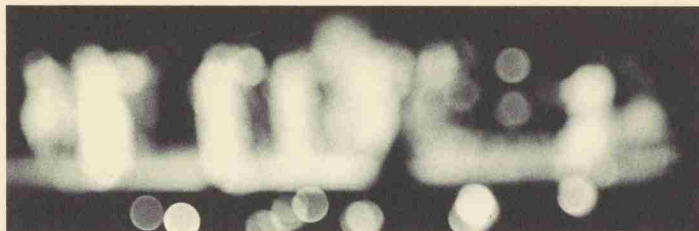

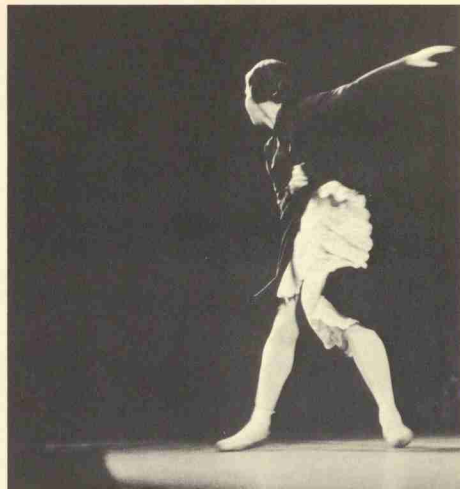

Ballet, whether interpreted by Degas or Nureyev or the American Ballet Theatre, is ballet. Images of poise and elegance well up within the mind, for a ballet has traditionally been a blend of the fluid motion of the dance and the grace and serenity of classical music. Above all, ballet is a sense of beauty, both poignant and timeless, that has come to life.

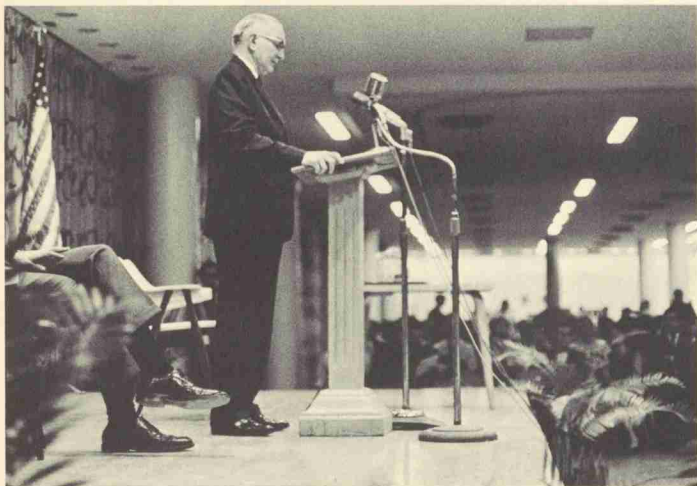

The Ballet presented this October may have jarred many who hold such traditional preconceptions. The dancers in one presentation were garbed in strictly unconventional Victorian dress and their movements struck some as being more devoted to Samuel Beckett than Swan Lake. Yet enough of the classical remained in the other presentations to satisfy the most conservative, while others were undoubtedly impressed by the attempts to innovate, to break new ground. Certainly none who attended felt that the ballet was ready to be replaced by the watusi.

A man cannot tell whether Appelles or Albert Durer were the more trifler; whereof the one would make a personage by geometrical proportions; the other by taking the best parts out of divers faces, to make one excellent. Such personages, I think, would please nobody but the painter that made them. Not but I think a painter may make a better face than ever was, but he must do it by a kind of felicity.

STUDENT ART AUCTION

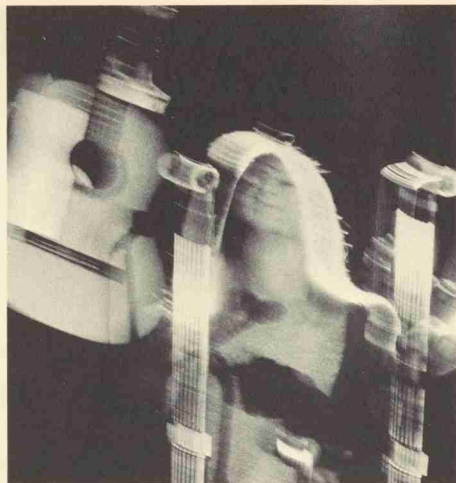

ARTHUR FIEDLER

I have never seen a newt, but I am convinced that creatures who have no music have no soul.

—KAREL CAPEK

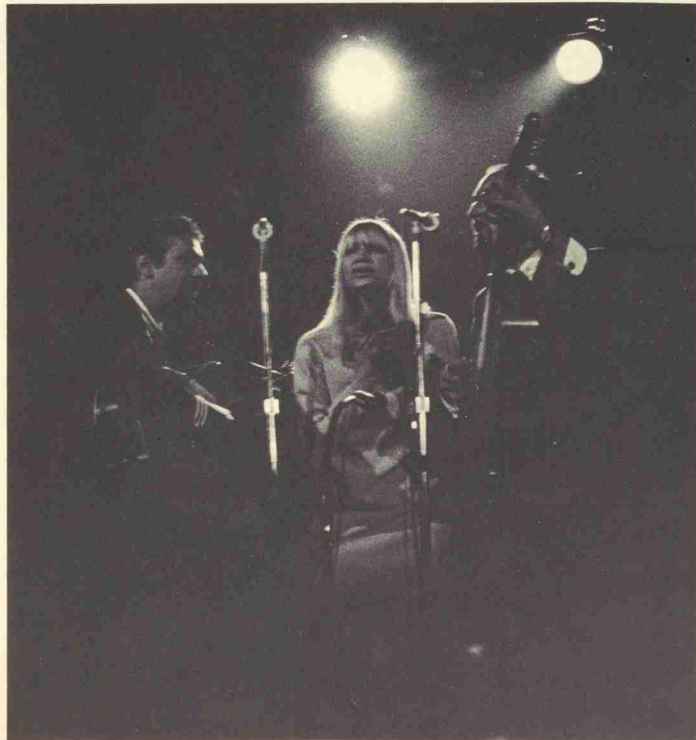

There was a time when folksingers were poor and oppressed and hungry and slightly off-key.

Now folksinging is big-time show-biz with all the attachments: Cadillacs and recording contracts and television appearances and smooth voices.

The songs themselves have become attuned to the times. Specialized. Their subjects are concentration camps and Joe McCarthy and civil rights and the draft.

Now no one can really dislike Peter, Paul, and Mary. They're nice people with even nicer voices.

Yet somehow one wishes they were a little less rich and maybe slightly off-key.

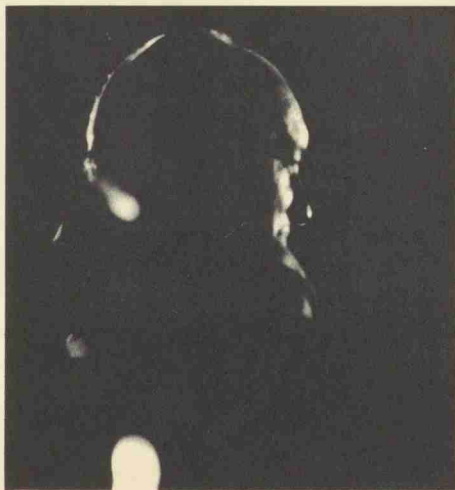

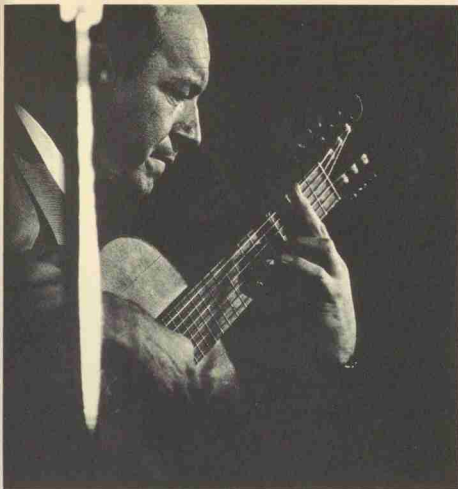

PETER YARROW
PAUL STOOKEY
MARY TRAVERS

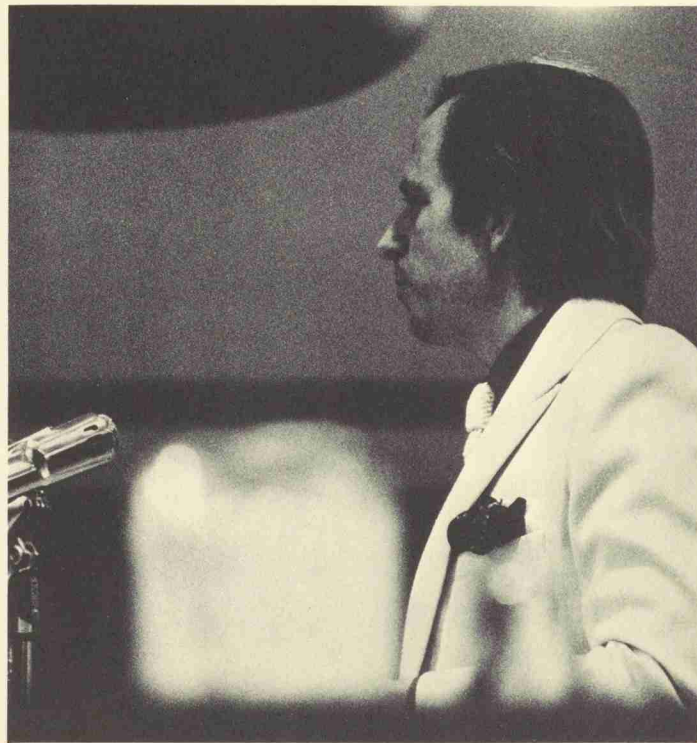

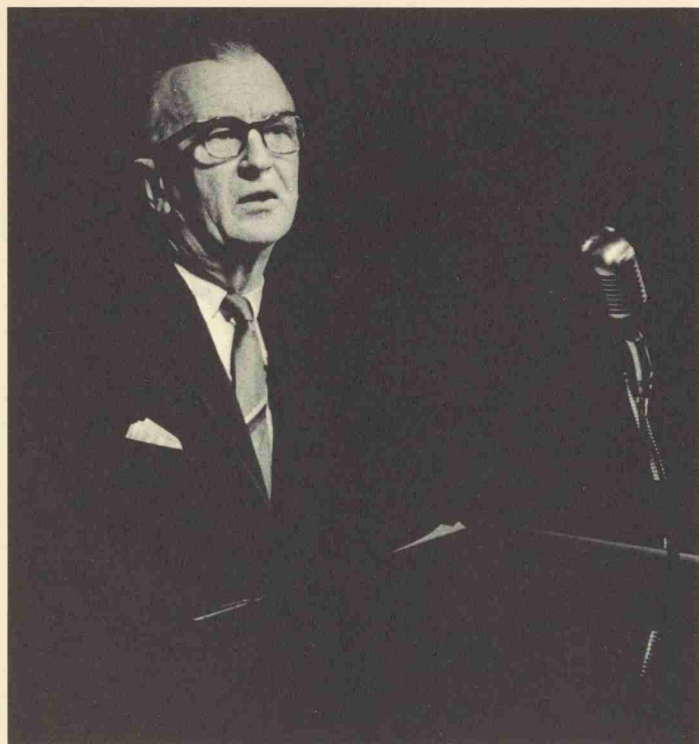

Van Cliburn, an aura of success still lingering from his 1958 victory at Moscow, made his second appearance at State in February. Anyone who attended under the delusion that "long hair" meant the Beatles found himself confronted with the likes of Debussy, Schumann, Prokofiev, and Beethoven — a continental combo that never made it big in the states.

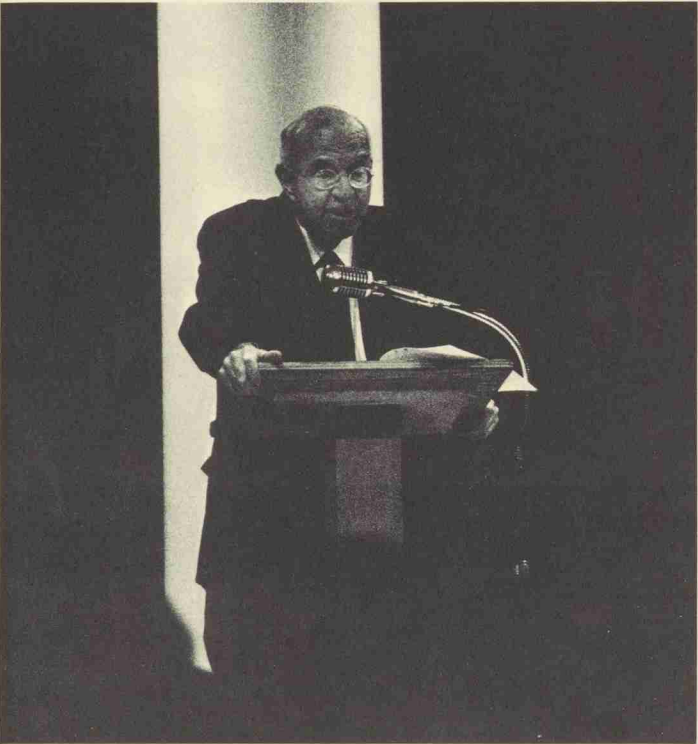

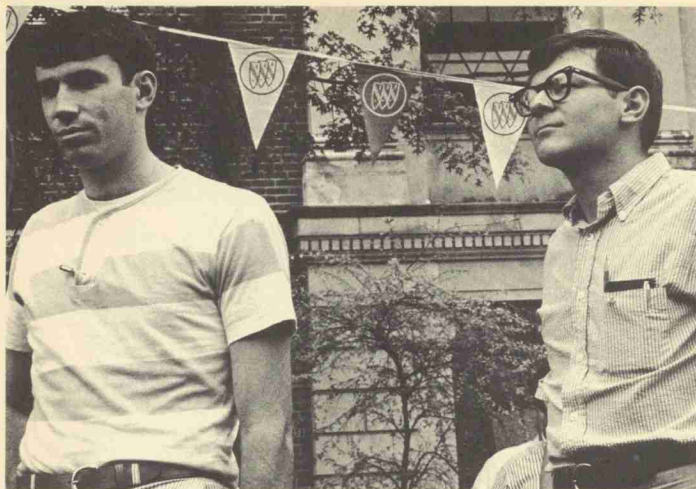

Why does Charlie Byrd feel compelled to close the gap between the sounds of the past and the sounds of the present? Has the "modern sound" really become the sole arbiter of what "music" should sound like? Have the Beatles made Bach obsolete?

Culture has become the God of the latter part of the Twentieth Century, a fool's golden calf into whose flaming maw we pour the manuscripts of centuries and then proclaim ourselves learned men. The ashes are left for our prophets to sift and decipher and tell us what we've gained, if anything.

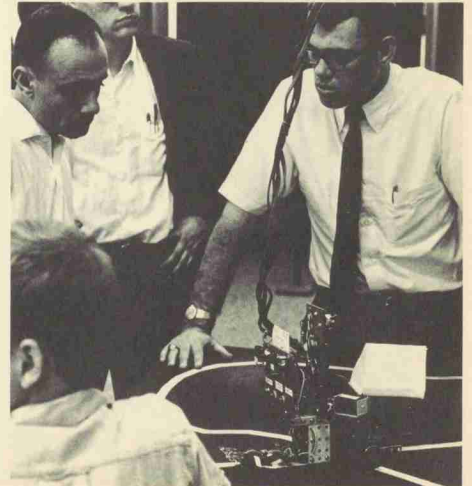

Four prophets came to State this year under the auspices of the Erdahl-Cloyd Union — Maynard Mack, Thomas Wolfe, John Dos Passos, and Alfred Kazin. The collective name for this annual literary entrails reading is "Contemporary Scene."

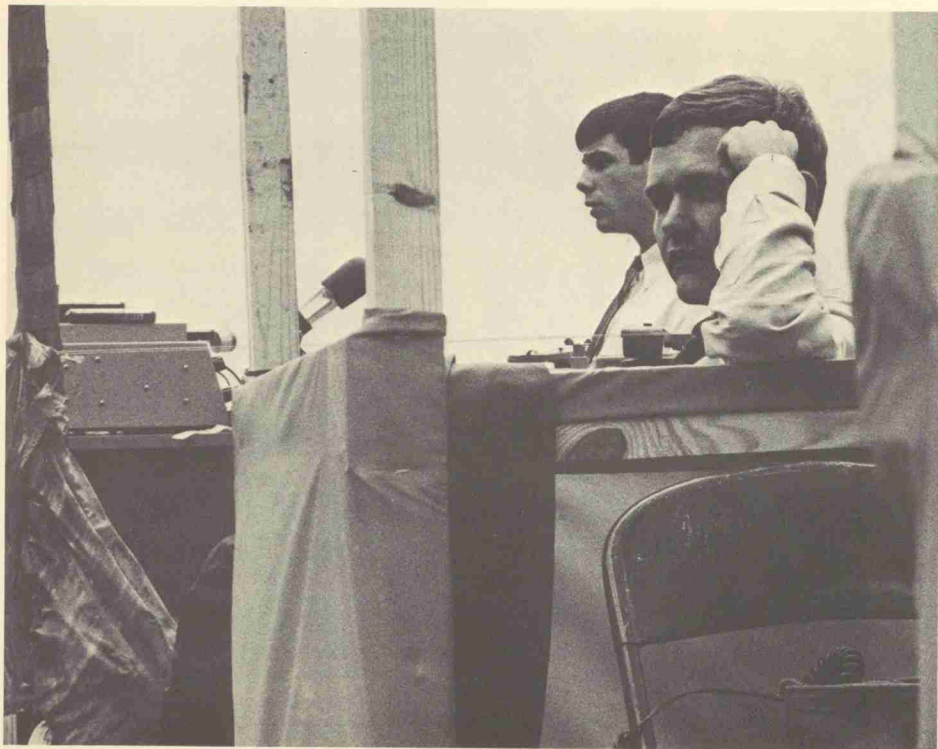

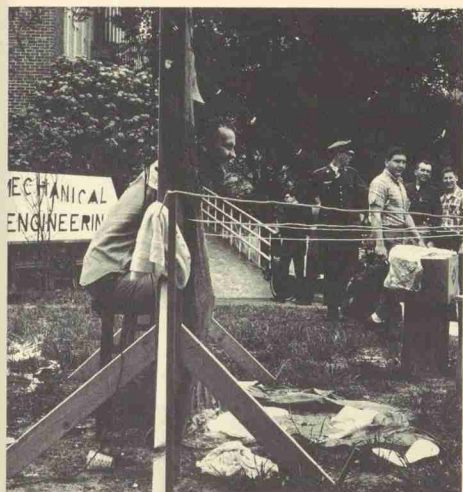

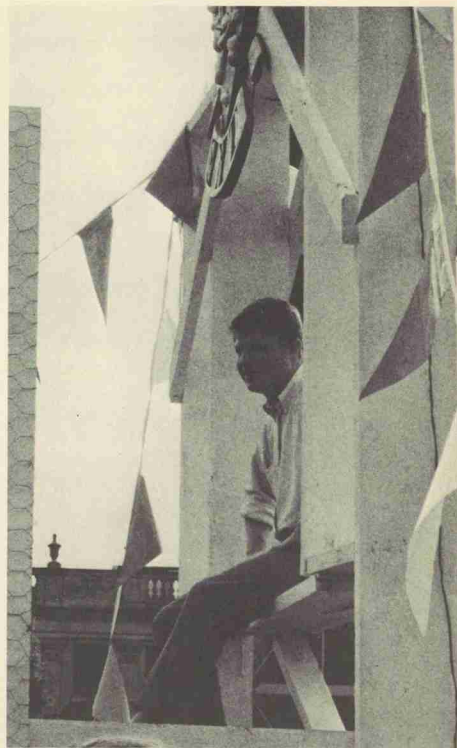

The Engineers' Fair gives everyone a chance to see exactly what those engineers have been doing all year. Displays include the usual quota of sincere-looking robots, radio-active mice, talking garbage cans, and radios made out of two matches, a bottle cap, and the eye of a newt.

Accompanying these electronic marvels, booths with games were added to allow those with a non-technical bent to participate. There were basketball free-throws, go-go girls, dart games, and one stand which gave all patriotic 2-S's a chance to sink the Viet Cong Navy with the aid of a water pistol.

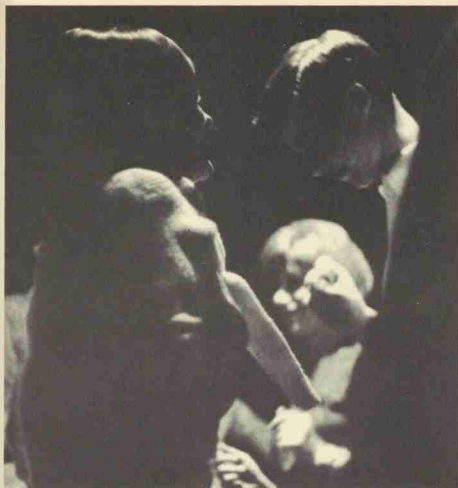

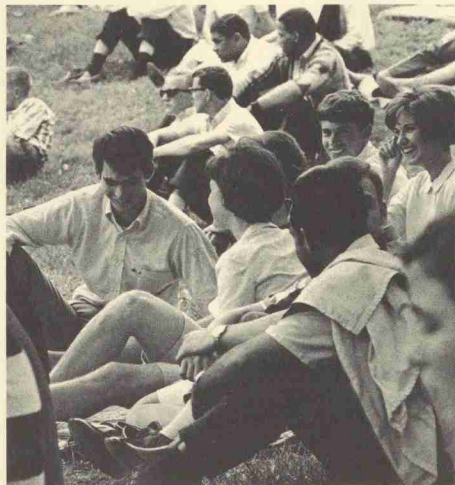

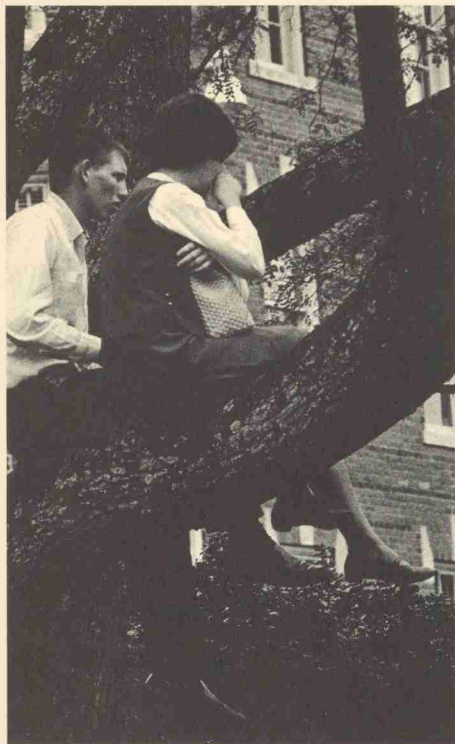

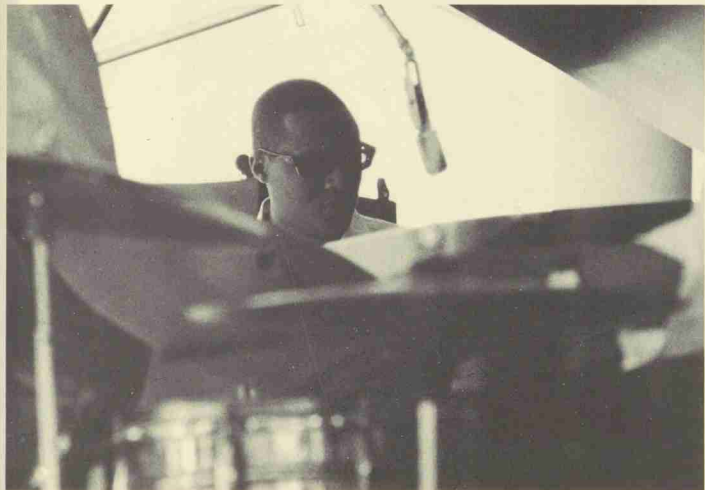

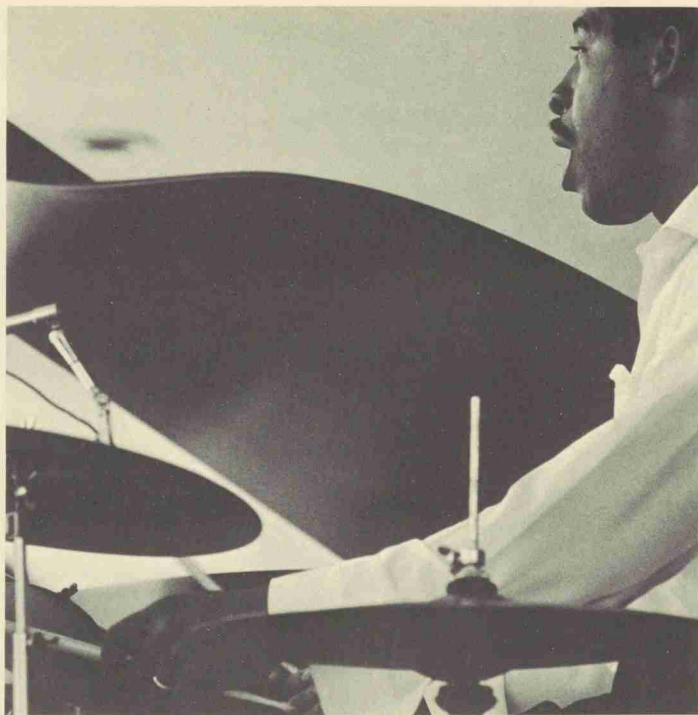

For those who had, at least until now, survived the whole ordeal so flippantly referred to as education, the university provided a reward in the form of an all-campus week-end to accompany the Engineers' Fair. Although the campus cynics were quick to deride it as an ersatz version of Carolina's Jubilee Week, everyone could find something to suit their musical palates, from country music to rock and roll to jazz.

Drama has always been a highly uncertain amalgam of word, thought and action—an amalgam never more uncertain than when witnessed in the three yearly productions of the Frank Thompson Theatre. Where else is Ibsen played for laughs?

Yet despite limitations of budget and interest, the productions are always carried off with a highly professional touch and an obvious love for drama as an art that the devoted followers of *Peyton Place* would never understand.

MUSIC
MUSIC
MUSIC
MUSIC
MUSIC
MUSIC

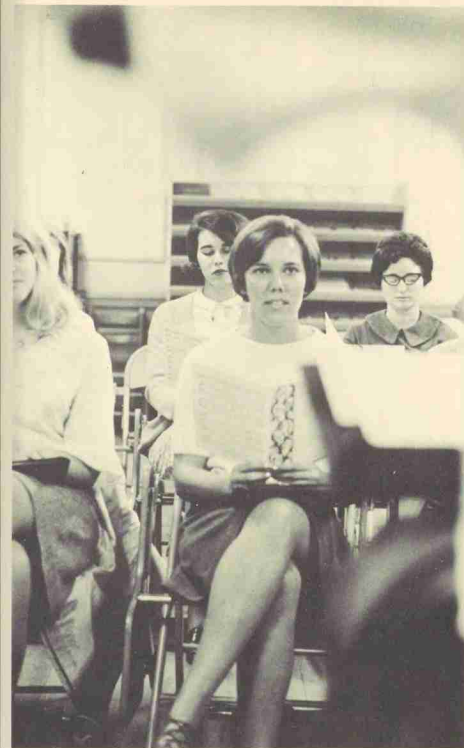

Any art form that can unite Leonard Bernstein and the Rolling Stones and still have room for bands and glee clubs is, to say the least, unique. Its success can be measured by the fact that *Pithecanthropus Erectus* was probably hitting two rocks together to make music before he learned to speak.

Music at State has come a long way from the primitive sounds of the cave man. (And has not yet reached the primitive sounds of such groups as Harper and the Bizarres.) Yet it still manages to soothe even the most insensitive elements on campus.

In a city where *The Sound of Music* can play to capacity crowds for over a year at one theatre, an organization such as Sight and Sound provides a welcome respite from the saccharine floods which originate in Hollywood and inundate the land. Although the definition of "art film" is too often stretched to include everything from Bogart to Kurosawa, the student who eschews the ordinary can be counted upon to attend regularly.

It prints the news every Monday, Wednesday and Friday mornings. It surrounds the news with stories covering the many faces of the University. But, the thing that keeps it alive is freedom — freedom to voice an opinion, a viewpoint. This viewpoint, usually expressed in the editorial pages, sometimes creeps into the rest of the paper. This is as it should be. It gives the paper a personality, that of people who make it up. In this way a moldy piece of pie becomes an opinion and a source of action. The response of the students who can recognize this personality is a form of reward to those who serve the needs of the students and the demands of a publication schedule.

When all the glue is gone, when all the gripes are forgotten, and when all the lost sleep is replaced, there remains a solid feeling of accomplishment. They can't take that away from you.

WKNC-FM is radio — collegiate radio; but what, one might ask, does this quasi ivy-league sounding marque mean?

WKNC-FM is organization — an organization that behaves and functions like prisoners who have to do it and corporation junior executives whose pay checks make them want to do it but without either. It's an organization impervious to the jibes and barbs of carrier current ridicule and one that must scratch for everything from that last penny from the "Board" to that five minute interview with someone who would rather be interviewed by WPTF. It is an organization that had a lack-luster beginning but one that has begun and is going in the up direction.

WKNC-FM is the small but faithful 19% who said no to W... and braved the rolling stones of irate suite mates, who said no to stereo mediocrity and sterile intellectualism and listen to what entertained and pushed back the dingy crannies of their brain. KNC-FM is special and its listeners are special and growing. All the electronically sophisticated meat and potatoes that make our magnetic wiggle, all the fanatical wonders who man her switches and typewriters — all these are special and make what we feel is a special way of feeling — WKNC-FM.

One of the few visible manifestations of the burgeoning literary atmosphere at State is the *Windhover*, the School's Literary magazine. It tries to provide some sort of cultural outlet for all members of the university, an outlet that is only gradually being taken advantage of by both campus and community. Despite an annual inundation of short stories and poems about disillusioned youth, suicides, and pet cats, the finished product is an impressive array of literary talent.

CARTER STADIUM
RALEIGH, N. C.

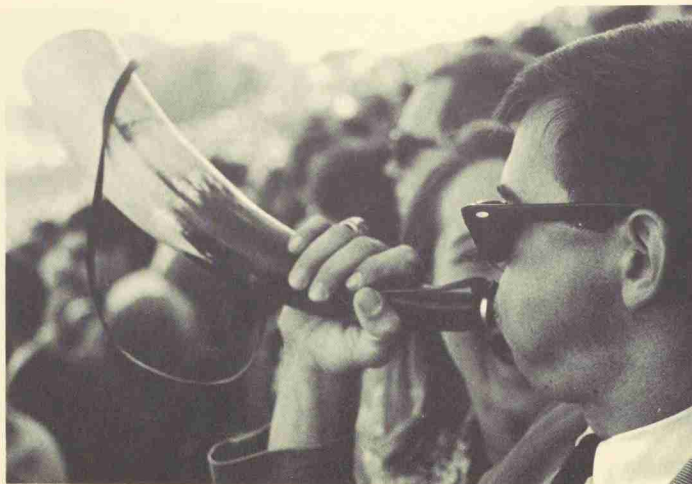

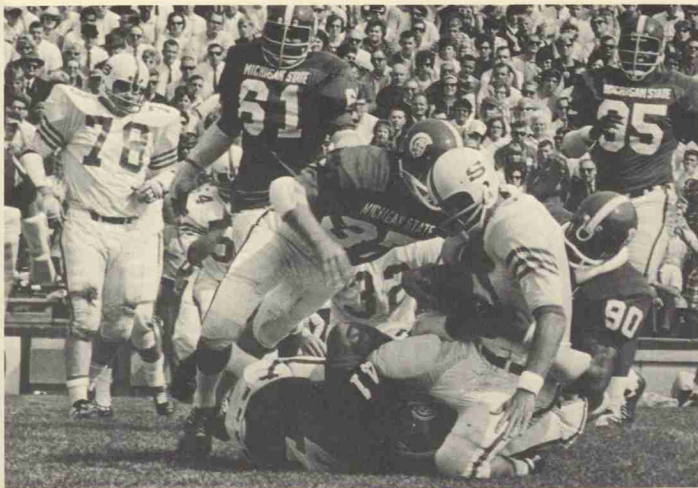

A chilly rain and a one-point loss to Southern Mississippi in the Oyster Bowl can be countered by a bright autumn sun and a win over Clemson, but weather isn't all in the mood of defeat — or victory.

The saddest thing at the Oyster Bowl, sadder even than losing, was a young camel that toured the field at half-time with Halloween dressed men and a wretched oriental band slopping over the wet grass. The one cloud smothering the city, the black sky, the cold wetness, the dirty stadium, a relic of Depression welfare, the defeat, could not equal the melancholy of a desert animal in raincoat weather.

A roll of drums, a bleat of trumpets, and just like the movies, life changes in a reminiscence. The gloom of a WPA arena is incomparable to the aseptic gleam of Carter Stadium under a, made-to-order football sun. Nothing is alive at first but the green-enough grass and the color in the girls' outfits. The brightness of the crowd has nearly covered the coldness of the concrete when that other life, those small figures in numbered suits, trots over the grass and takes up its carefully ordered positions that only the fan can be privy to. The droning of the advertising plane and the liquor laws can be ignored, but now no one can ignore the brightly colored giants posing as gnomes on the green-enough grass. The pain of the checks and tackles cannot be felt in the stands, the agony over a missed assignment cannot disturb the happiness of a crowd that knows that its hour has arrived, its glory that its team is the one that controls the green-enough grass.

The game only has meaning that it is given, and this one has even less meaning than the ones before it: the loser will still be the champion when the gun sounds — Clemson cannot lose even though it is not the victor. For the winners it is still a loss; for many they will not play again on green-enough grass before an agreeable crowd; they will not challenge seven other teams to a test of strength again. A victory will ease the memory of an average season only a few moments, but it is a good way to go, a good last effort.

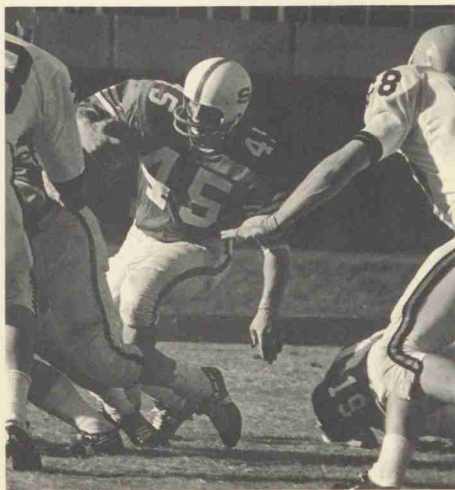

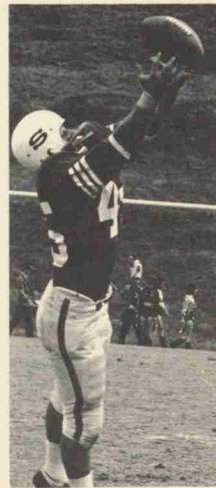

State continued its role of arbiter of Atlantic Coast conference football with a team that performed well, though less well than its potential. A second place finish broke the string of three straight championships, but the Pack's kicking game win over champion Clemson in the final game pushed the decision into the last week of the season.

Elsewhere, particularly at Michigan State, the team kept up the conference tradition of losing all the non-family tilts. Michigan State came out for blood and a national title and sent four Pack starters to the doctor. Their absence led to the most important loss of the year at Chapel Hill the next week, but State beat Duke, and Duke got its licks at Carolina, so everyone had at least one chance to brag and imbibe a victory punch.

Otherwise it was dominate your friends and don't antagonize visitors all season. State provided the people at Columbia something to smile about by giving South Carolina its only win, but mopped up the rest of the conference as in the gloried past.

Florida and Southern Mississippi proved again that the ACC in general and State in particular ought not to get out of its own neighborhood.

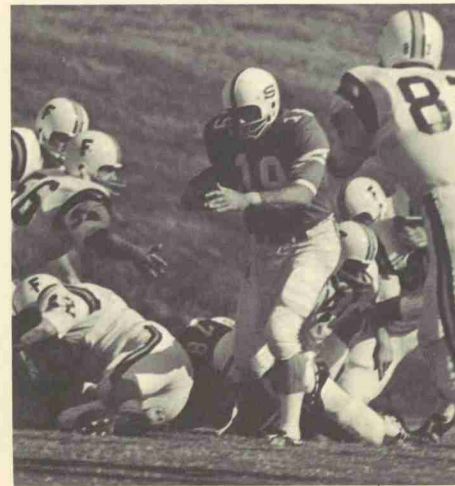

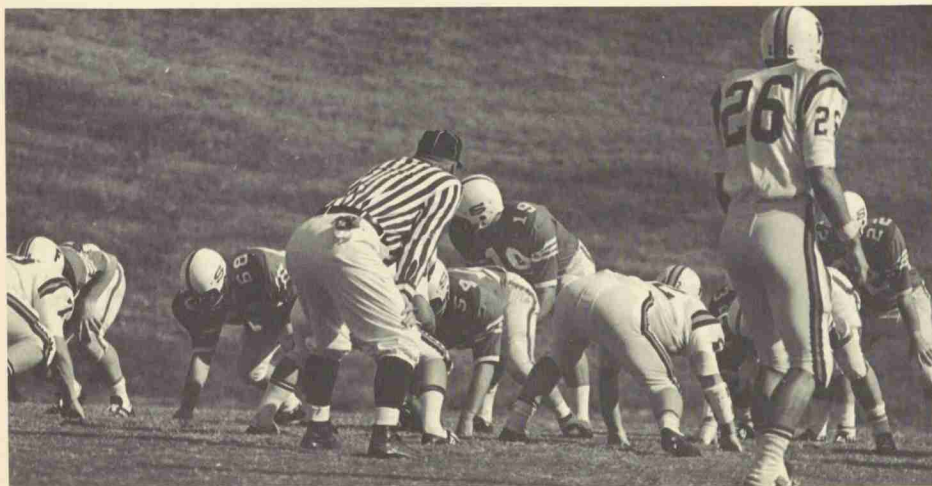

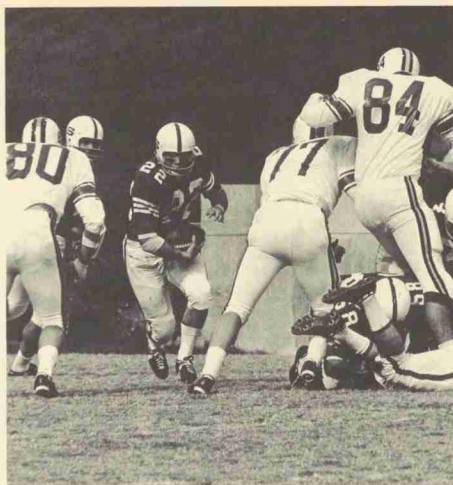

It was a good year for the Wolfpack offense in 1966. There was more of it, and it came in more different ways than fans had been accustomed to for many years.

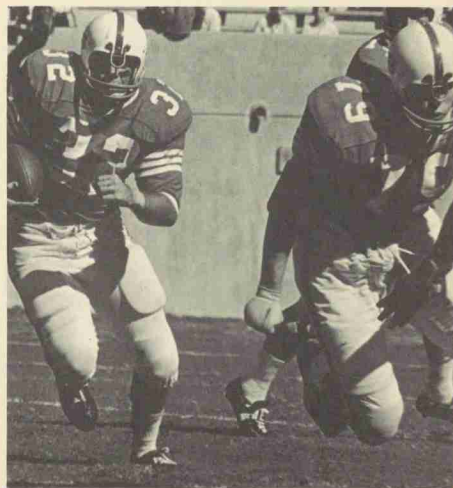

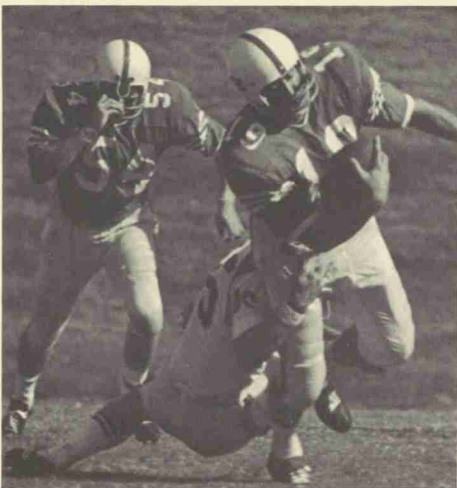

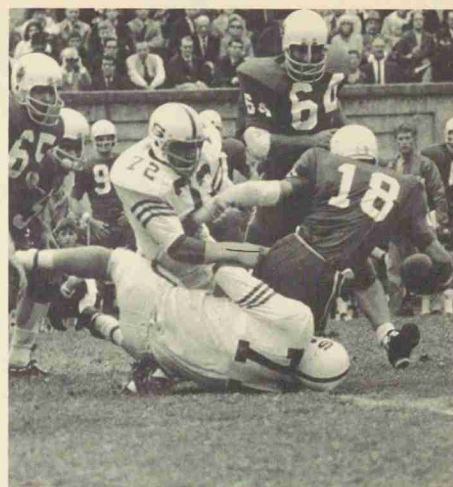

Co-captain Gary Rowe ran back two punts for scores in one game, only the second time in the school's conference history that a punt returned had not been stopped. His sure hands and fancy moves kept him well up in the national kick return averages all season.

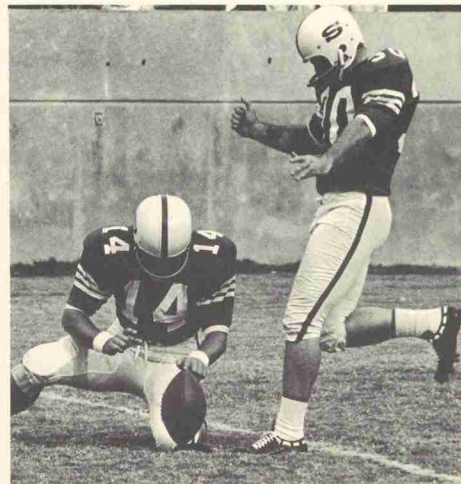

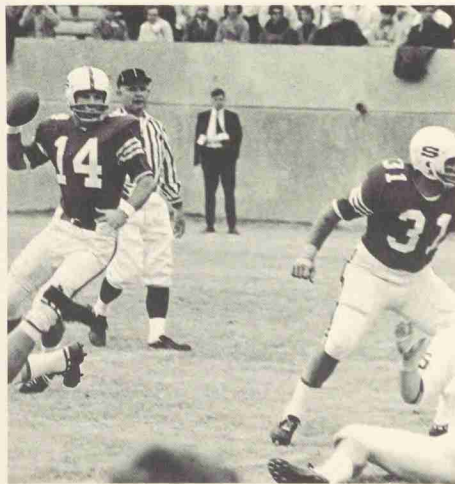

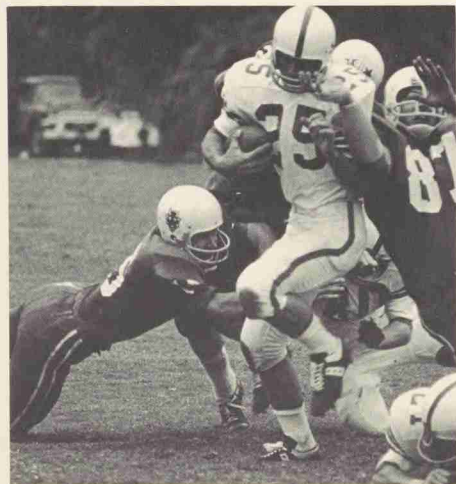

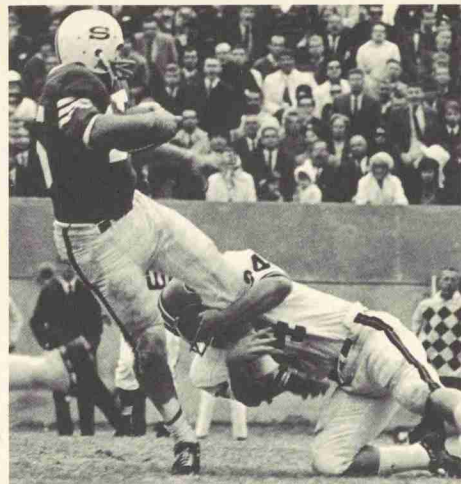

This versatile back broke all State pass receiving records early in the season and his fellow halfback Don DeArment smashed Alex Webster's ancient season total by hundreds of yards. DeArment came within feet of taking the ACC rushing crown, losing his place on the last play of the last game of the season.

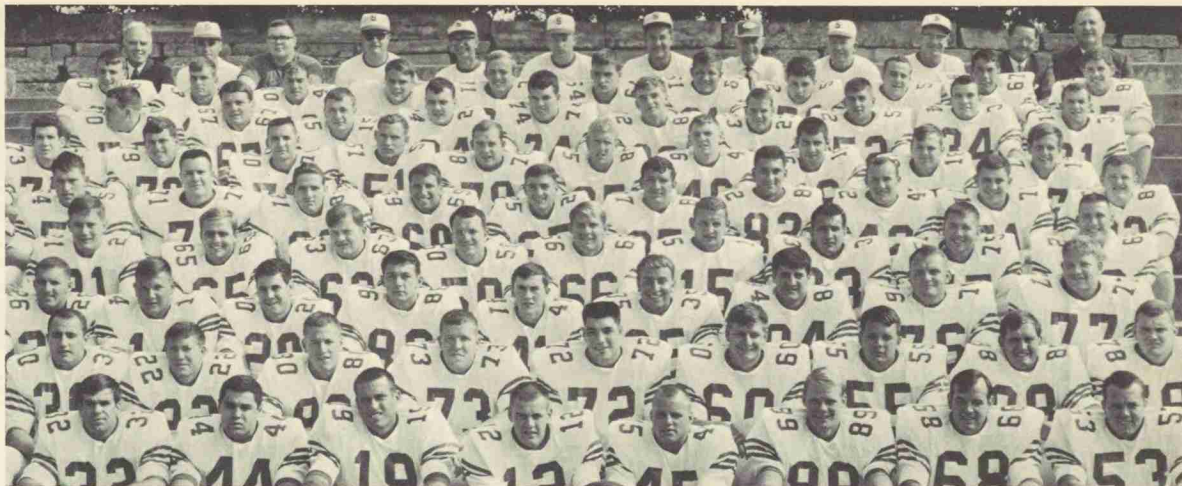

Harold Deters broke a record by kicking more field goals than any other player in State history and tied his own record for most field goals in one game. Not only that but he set a record for most consecutive points after touchdown and most PAT's in one season.

The 1966-67 State basketball team had class. It didn't win many games, but it arranged to win most of those it did win at home so that the supporters could share the glory.

It didn't win many games, but it won the Triangle Tournament, and beat a highly regarded team to do it.

It didn't have experience, but it had class and poise. It played close games with two of the country's best, Carolina and Duke, and it lost, but not because it got flustered and lost a lead.

It had the only coach in the country whose wife sang the National Anthem before home games. It had class.

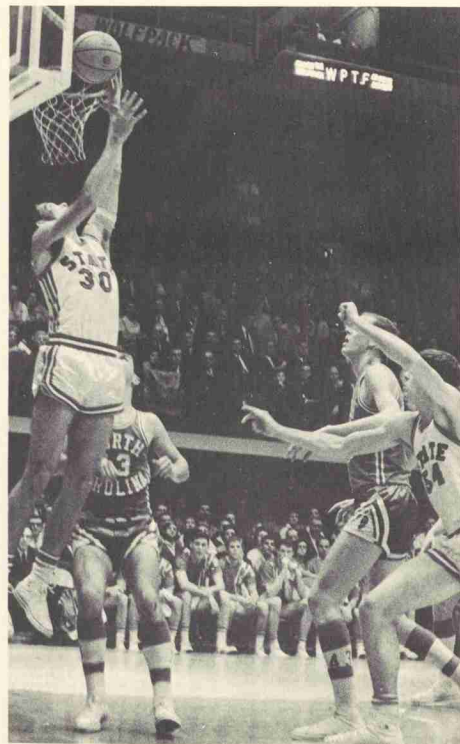

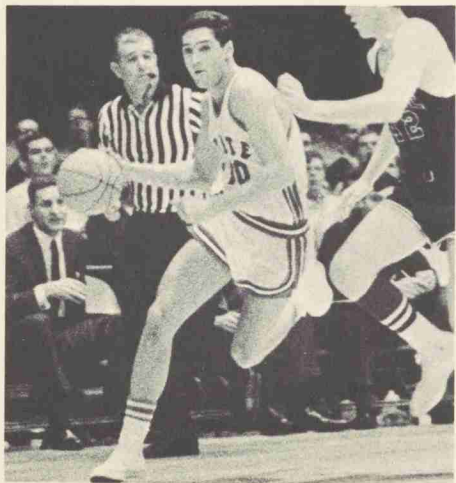

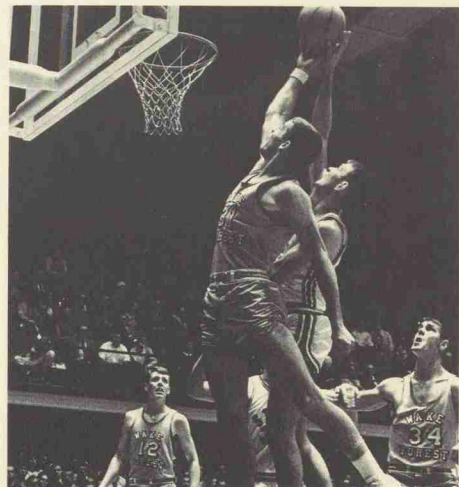

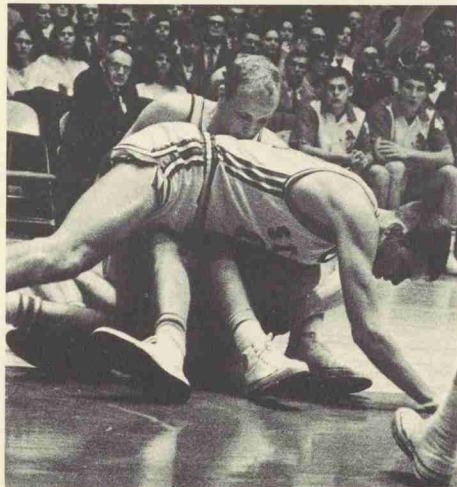

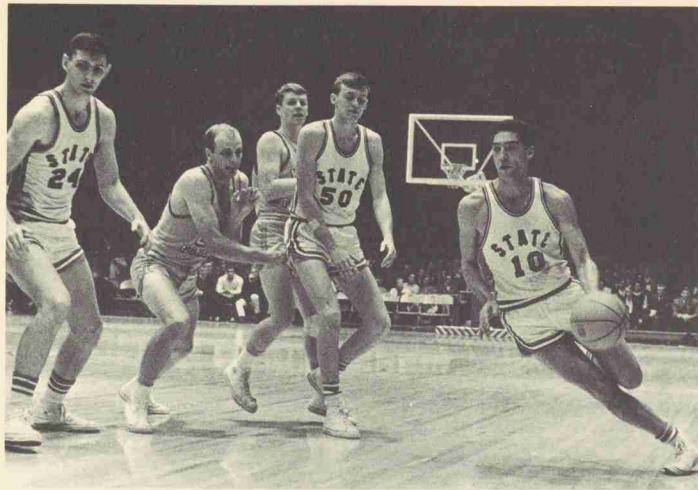

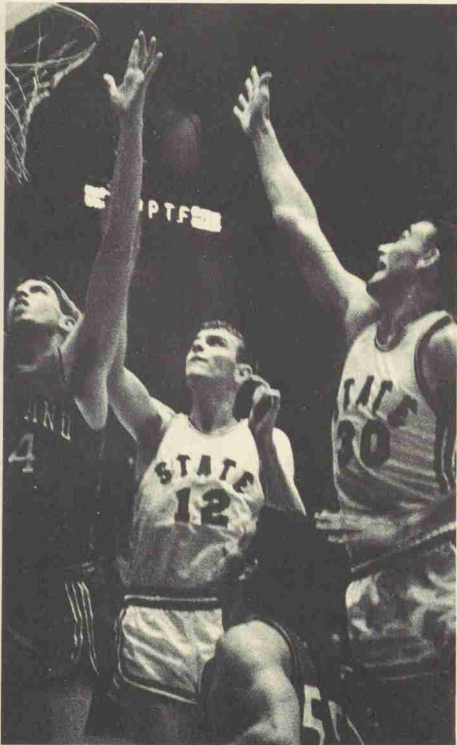

State partisans are used to having their basketball teams do well year after year and any deviation causes more grief than failures in other sports do. This year was not vintage for State, but the evidence indicated that it was, indeed, a fluke.

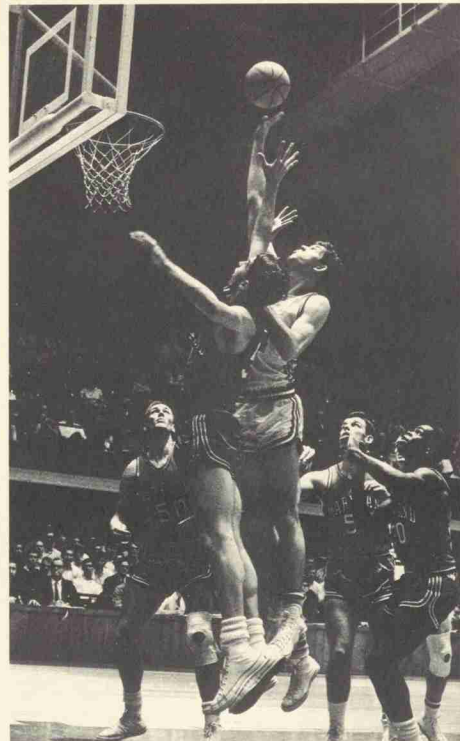

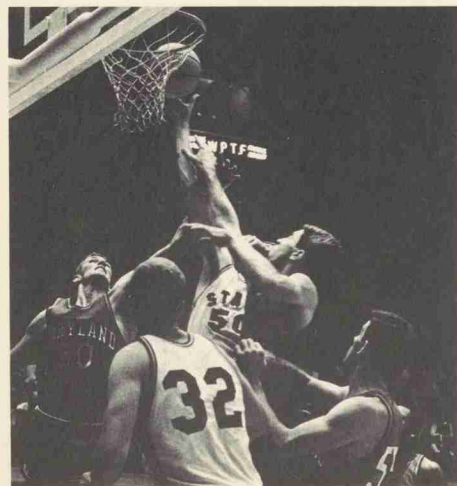

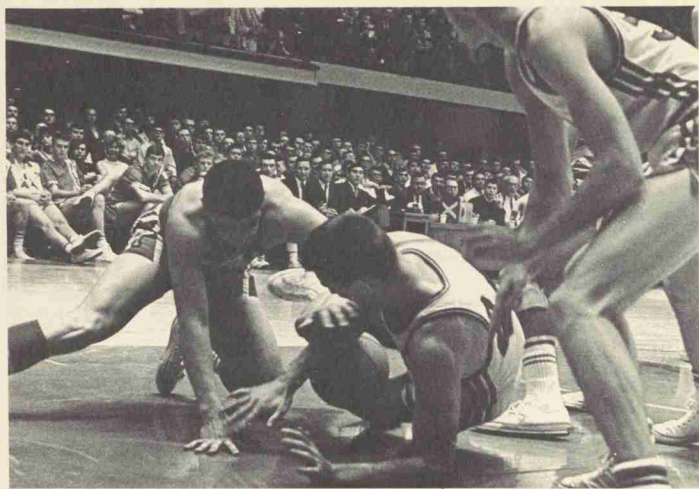

Almost everyone who played the year before was gone, and so was the coach. The new coach, Norm Sloan, and the new players had a long way to go.

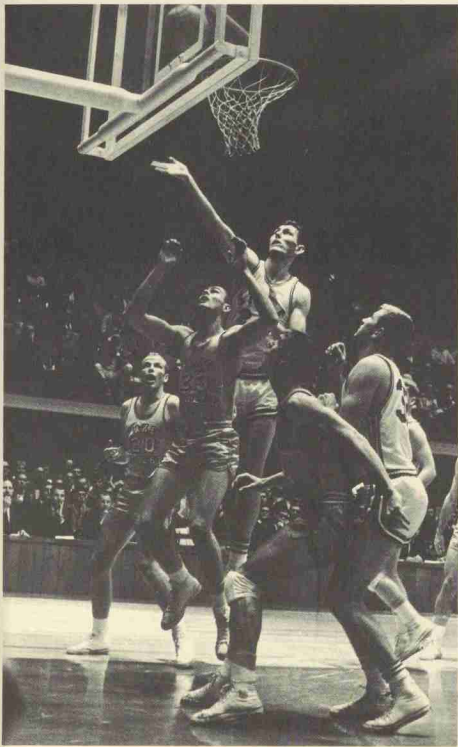

They went a long way before the season ended. It wasn't a brilliant, record-breaking team (except that it lost more conference games than any other Wolf-pack squad and tied a mark for consecutive losses), but it was a heart-breaking team.

The team couldn't have been as bad as its record said. While it set a record for ACC losses it took time out in a non-conference game with ACC team South Carolina to beat the Gamecocks and win the Triangle Tournament. It lost to number two ranked North Carolina by one point, and led Duke until nearly the end before losing to that nationally ranked team. It was not a good year, but it was a better year than the score said.

The swimmers do not end their competitive season when State completes its schedule. During the summer they fan out over the country and the world, exchanging the enervating hothouse atmosphere of a heated indoor pool for the breezes and sunshine of outdoor meets in Russia or California or less exotic North Carolina.

State swimmers have swum on special international teams, with Philadelphia's famous Vesper Swim Club, and the North Carolina Athletic Club (made mostly of athletes from North Carolina universities and colleges.)

Indoors or out, theirs is the only sport at State that never has an off season.

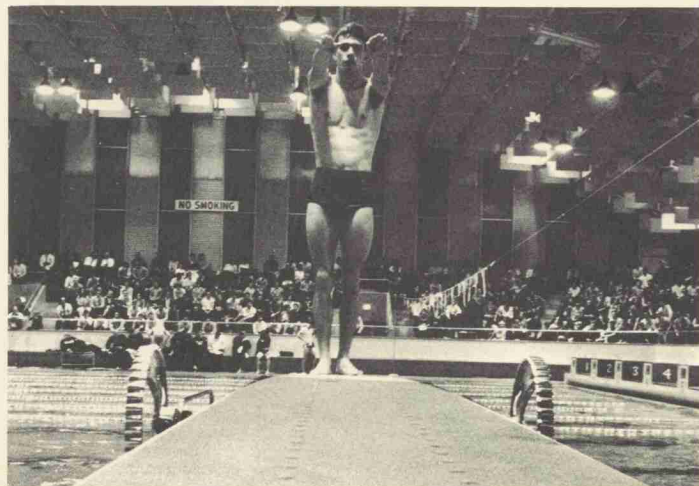

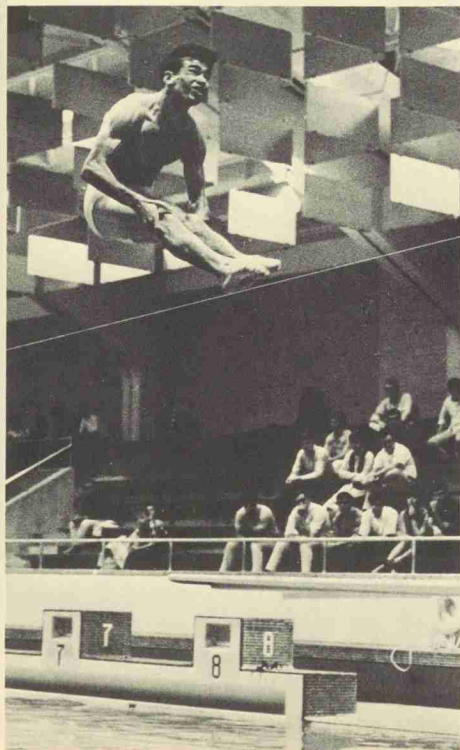

Taxes may go up and the student deferments may be revoked, but one thing is both sure and steady — the swimming team.

The swimmers lost a dual meet at Yale this year, but that doesn't happen often. The six all-Americans on the team and their helpers regularly demolish their opponents, both in and out of the ACC.

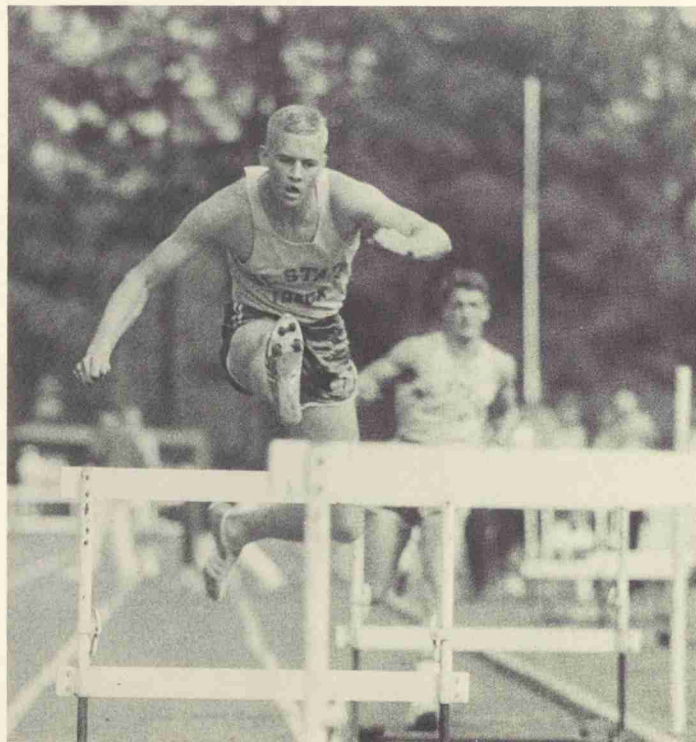

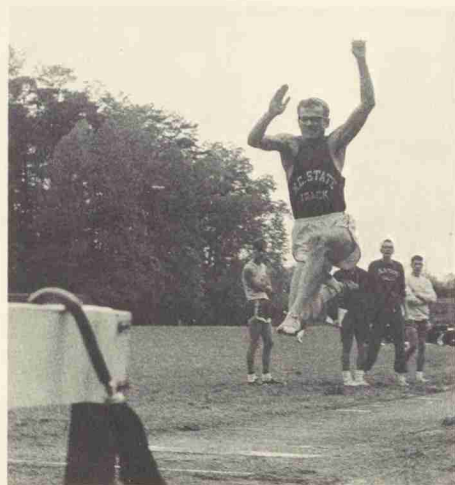

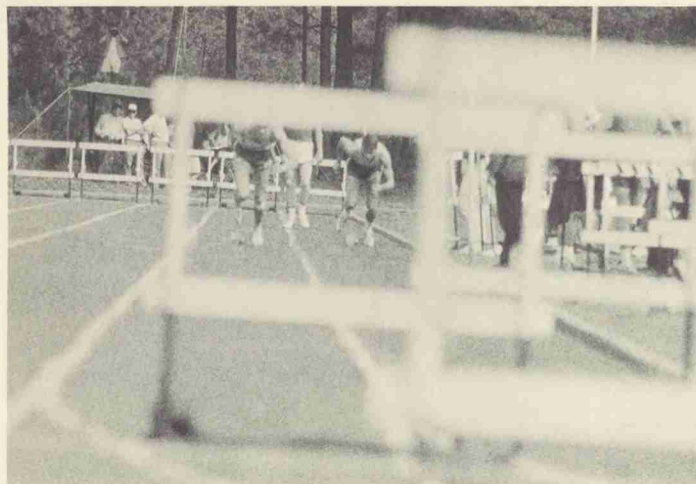

After smashing Maryland the team began looking for a repeat of last year's conference championship, and trips on to the AAU and NCAA championships. With many of last year's champions and new strength in diving and backstroke, the swimmers of Coach Willis Casey were anticipating new honors in the water.

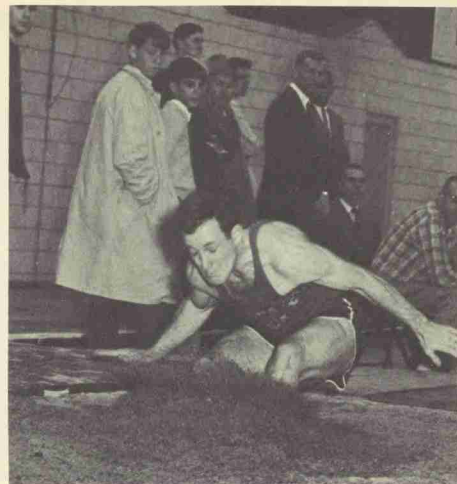

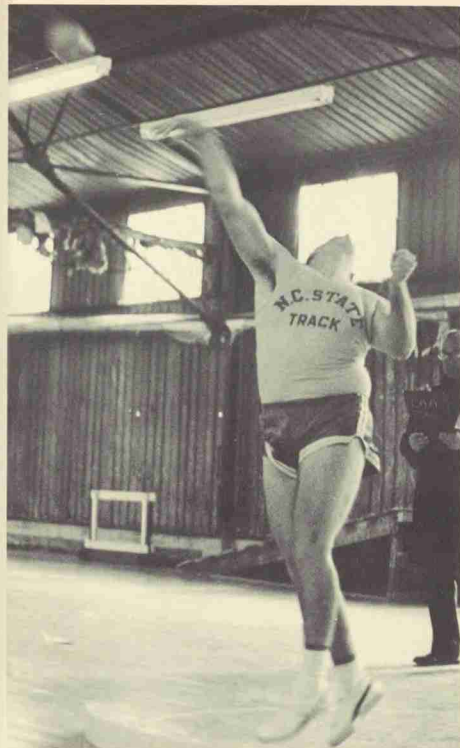

With four of the six All-Americans (Ron Wirth, John White, John Calvert, Jeff Herman, John Lawrence, and Steve Rerych) scheduled to come back next year the success of this year and last looks like a continuing habit.

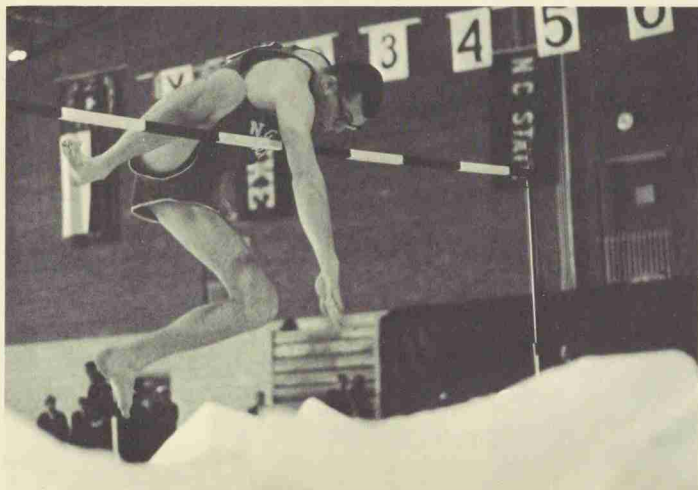

JOHN LAWRENCE, LARRY HANNIBAL, PAT GAVAGHAN, JOHN RISTIAN, DON HECKLER, BOB HOUNSELL, WARD HILL, PETER McGRAIN, GEORGE CAMERON, JOHN WHITE, JOHN CALVERT, LARRY LYKINS, LEE JONES, RON WIRTH, STEVE RERYCH, SAM FALZONE, JEFF HERMAN, JACK WRIGHT, ART WIENCKEN

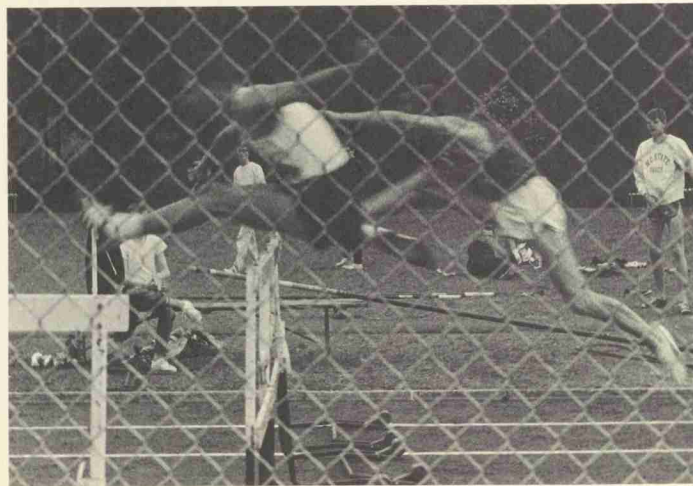

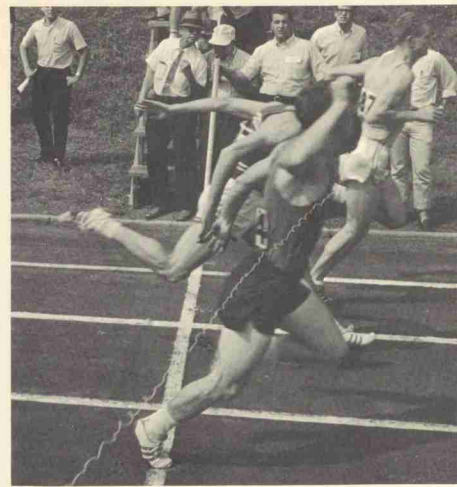

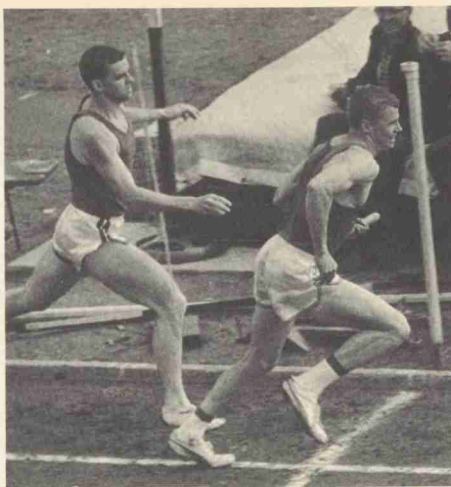

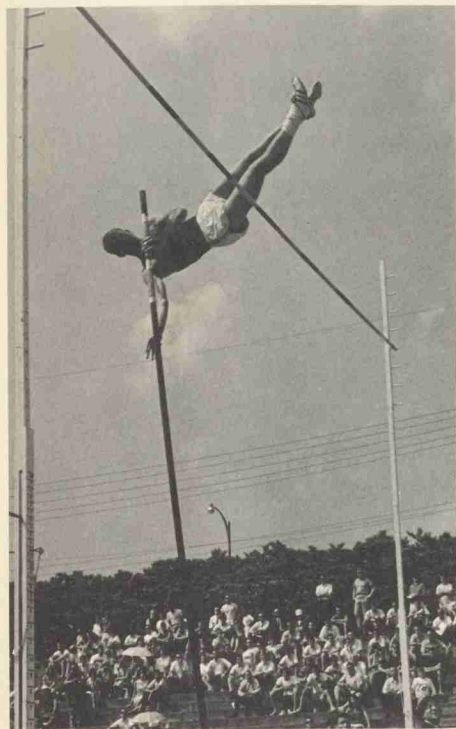

As adulation follows a record breaker so shin splints follow a track man. The road to the Olympics is paved with the panting remains of runners who jarred their legs to quivering jelly. The faint of limb and weak of heart do not last in track. It takes more than an ordinary athlete to make four trips around a quarter mile track for fun: ahah, ahah, huff, Damn stone, ahah, ahah, huff, I'll have a blister before I finish, ahah, ahah ahhh, done at last, Charlie do you have a spike? This one's out of line. Every afternoon, just for fun.

The track team got off to a better start than in years in 1967, smashing its own record in the mile relay and going to the Millrose Games and the United States Track and Field Federation championships early in the season.

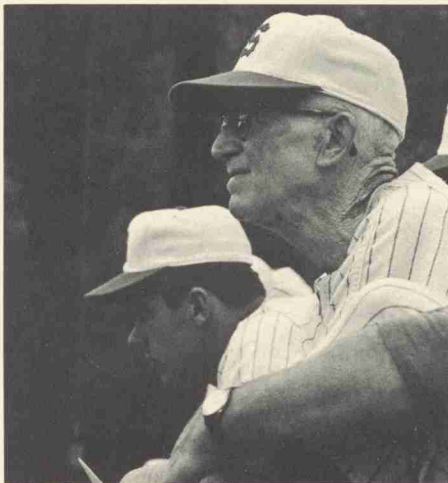

The runners and jumpers and heavers and throwers still found themselves outclassed in ACC meets, but things were looking up by early spring. With some fleet sophs off a fine freshman squad and plenty of experience left from the year before, the 1967 edition could call itself hot, sweaty, winded, and sawdust smeared as it was, "most improved" in years.

Gone are the days of baseball glory with 150 State men tried out for the team, and it took three days just to give each one a chance to bat. Gone is Vic Sorrell, the gentleman who led the team from the gone days to the recent days and stepped down this year.

The team got a new coach, Sam Esposito, who also handles basketball. Nothing else changed.

Baseball won't go back to the gone days when 150 men tried out for the team.

Like the fights and the Indianapolis 500 it has changed during the twenty years Vic Sorrell coached it. Not many people come out for the team; almost no one follows the players' averages. Not one student in 100 can name last year's ACC baseball champion.

But still, on a hot spring day the old guard comes down to the field and lies under the trees and eats popcorn and watches the teams play, always hoping to see a homer put over the creek.

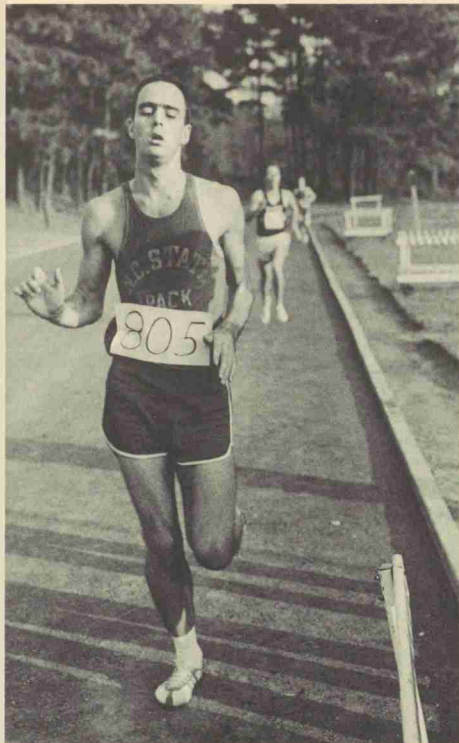

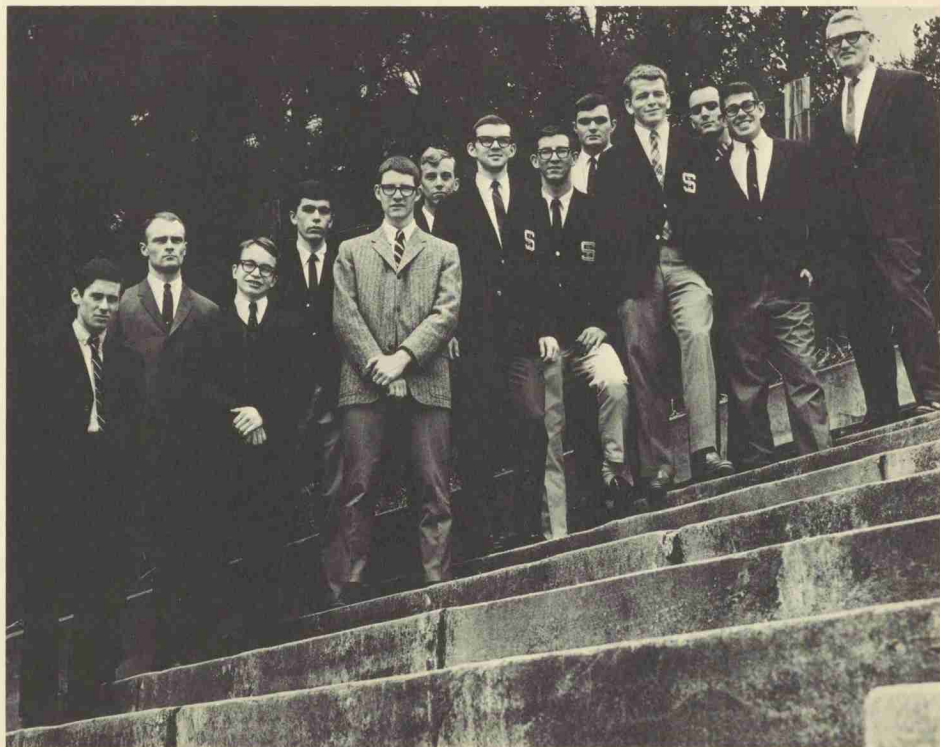

Anyonewho has ever run the State cross country course, and not many have, is overwhelmed by the thought of actually slithering up those hills, slipping in that mud, jarring down the hard straight, and finally, mouth dry, lungs feeling like an unpres-surized aircraft cabin, shins splitting, and feet aching from rock bruises, wavering across the finish line for fun or even for competition.

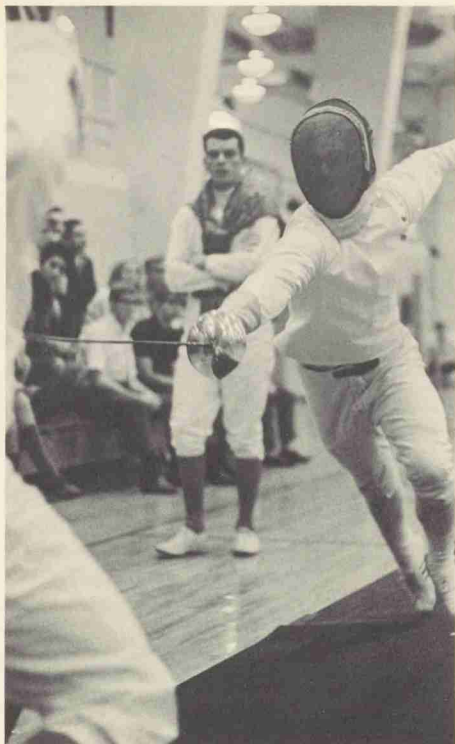

Not only do the harriers do it for fun and competition, they cross that finish line erect and relatively fresh, as if they haven't passed an ordeal. But they have.

PETER MacMANUS, COACH JIM WESTCOTT, ED CARSON, GARY McCURRY, JIM LEE, LEE PROCTOR, STEVE MIDDLETON, GEORGE PARRIS, LARRY JORDAN, ED PLOWMAN, TOM FERGUSON, MARSHALL ADAMS, COACH MIKE SHEA

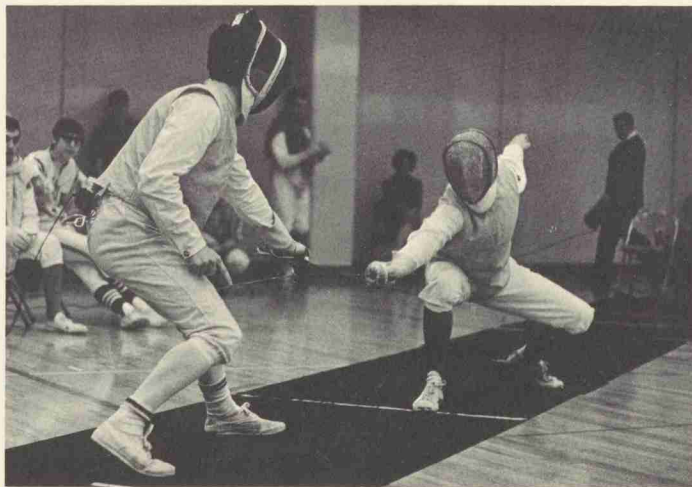

Not many people anywhere fence since the invention of the machine gun, and until recently almost no one in North Carolina did. Still, this did not stop the fencing team from winning six medals in the 1967 North Carolina open championships.

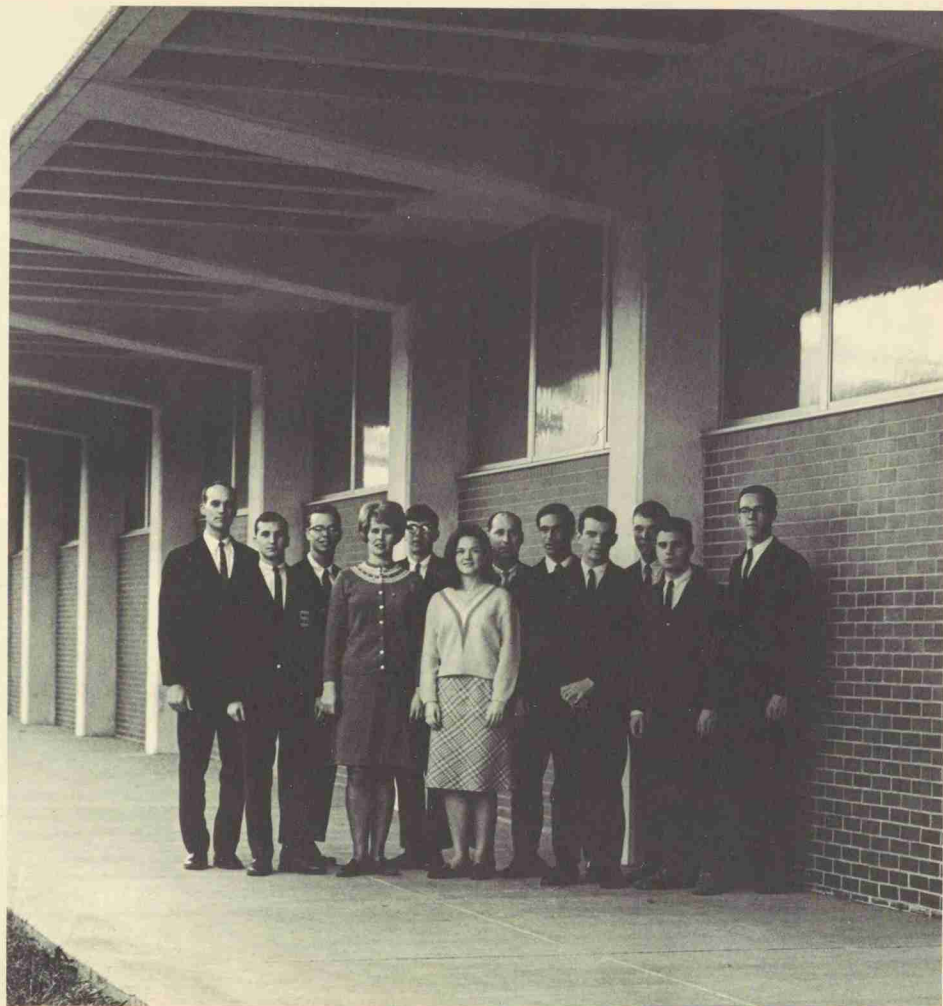

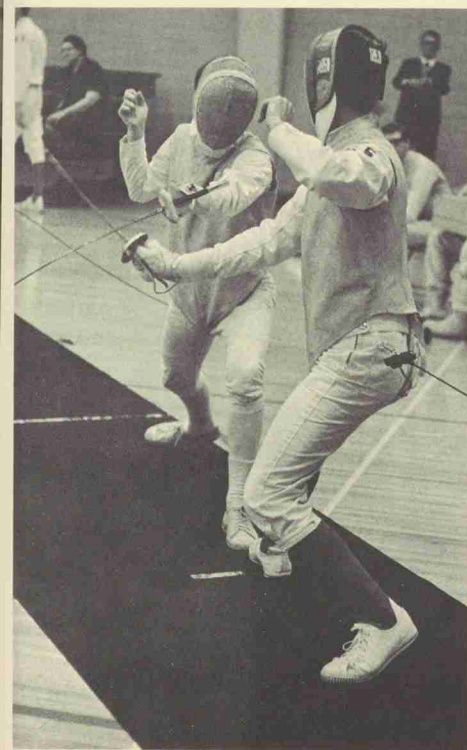

Since Coach Ron Weaver brought fencing to State the sport has also come to Carolina and Duke, and even to the University of North Carolina at Greensboro.

The sport continues to gain speed and support, and promises to become one of the most popular "minor" competitions.

Bill Hube represents State as a North Carolina champion, and Bob Mituniewicz, Karen Costerisan, Dianne Ramsey, Rick Hosey, and Ray Lamont own medals as top swordsmen and women in North Carolina.

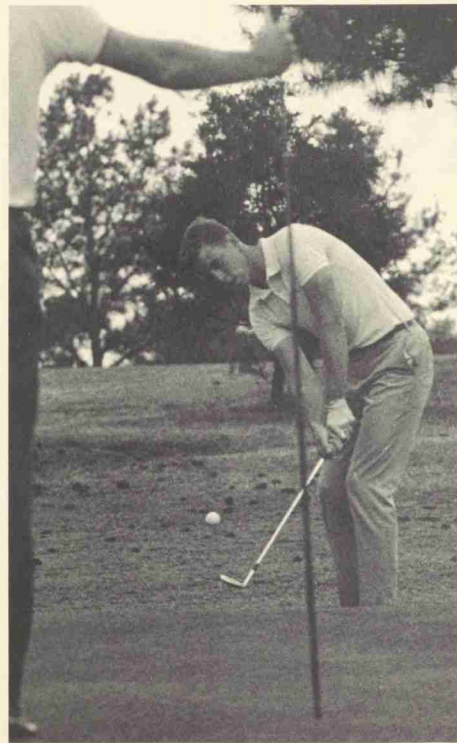

STEVE WORTHINGTON, RAY LAMONT, ROBERT THOMPSON, KAREN COSTERISAN, CALVIN BARNHARDT, DIANE RAMSEY, COACH RON WEAVER, BILL HUBE, WALTER TURNER, TIM ISENBERG, BOB MITUNIEWICZ, RICK HOSEY. ABS: MANAGER CRAIG KUEHN, CAPTAIN JOE BELLAMAH.

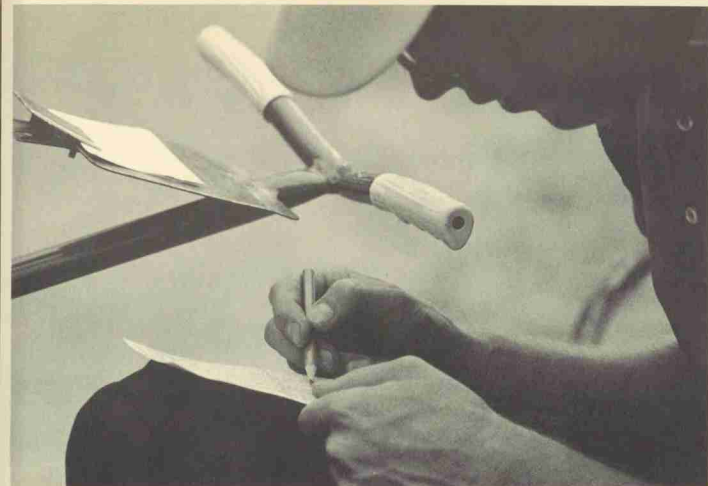

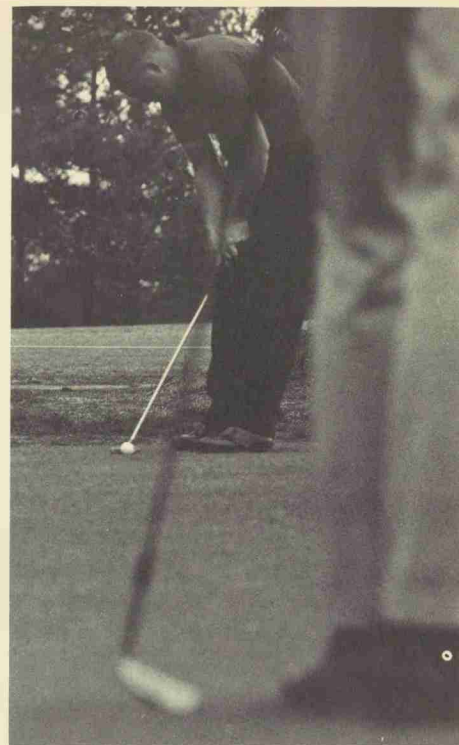

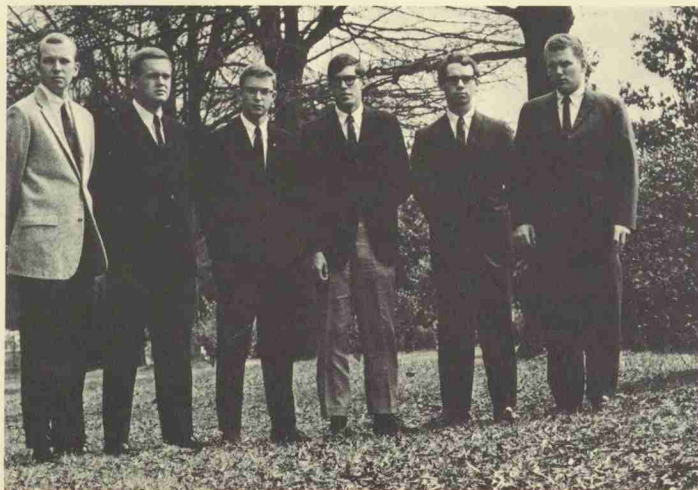

Golf teams rise or fall on the quality of the local grass. No one wants to chase a little white ball over sere, brown grass; lush greenery foreign to Raleigh draws golfers in plus-fours, checkered caps, and cashmere sweaters. Only the most dedicated golfers can surmount the depression of the local brown grass to go out and practice daily from the time the robin first sings (about January 15) to the end of the year.

The golf team is one of the small, unheard of sports that call a special coterie of men to its ranks. All they need, though, is grass.

The hundreds of foreign students at State do not have to abandon their national sport when they come to Raleigh as long as soccer is played.

This fast sport, which looks like football played in basketball uniforms on a hockey field, is the athletic mania of nearly all the non-Anglo-Saxon countries of the world. Here is a little known sport that offers to its relatively small number of followers as much action and excitement as any other sport in the program.

As usual in the ACC, Maryland won the championship and everyone else, State included, was allowed to fight for second place.

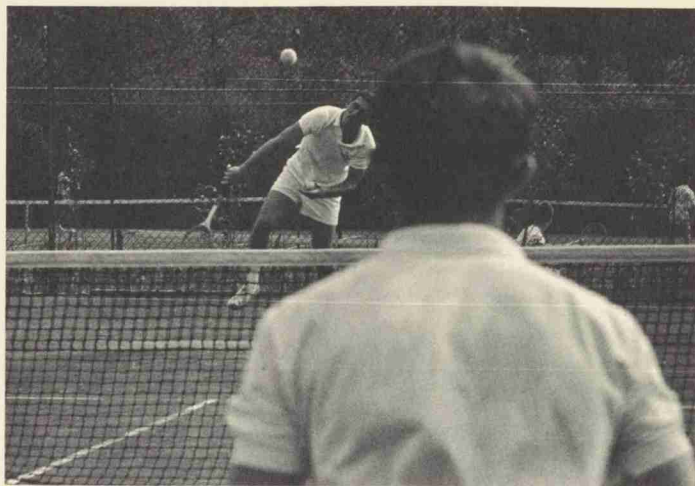

But this year Maryland, which has never lost a conference game, was forced into an overtime, and everyone else, State included, cried, "Wait 'til next year."

DOUG DIANIS, TIMOTHY DOFFIN, WARNER LUCAS,

Tennis at State entered a new stage this year with new coach Norman Chambers.

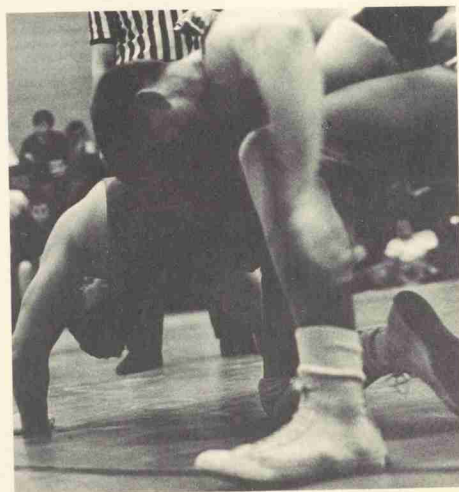

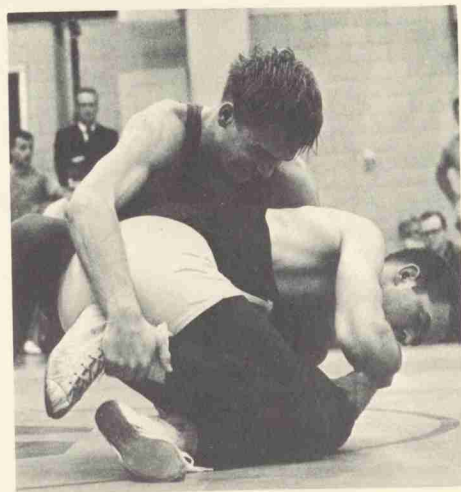

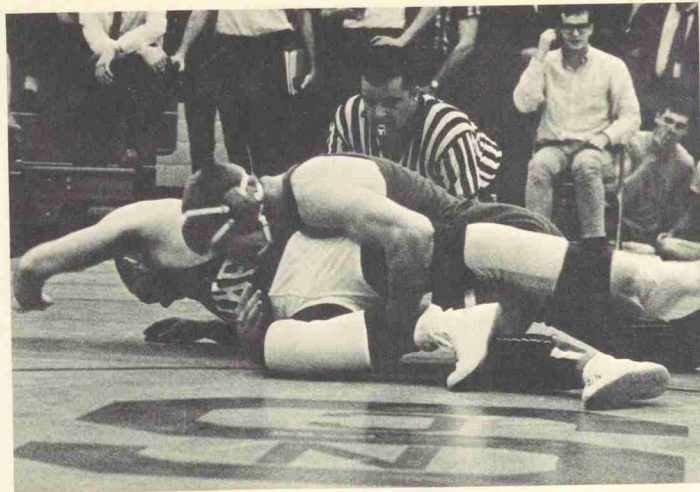

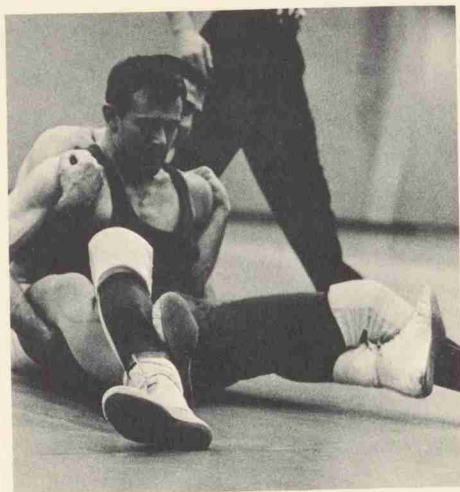

Otherwise things are much as they have always been. State tennis teams have never finished last in the conference, but then again they have never finished first, either. The scholarship tennis players of Carolina and Maryland dominate the tournaments, but the success of the sport here is proved when the players play club meets in the summer months and hold their own.

After fourteen years of tennis with John Kenfield, State tennis promises to keep its former position under new management.

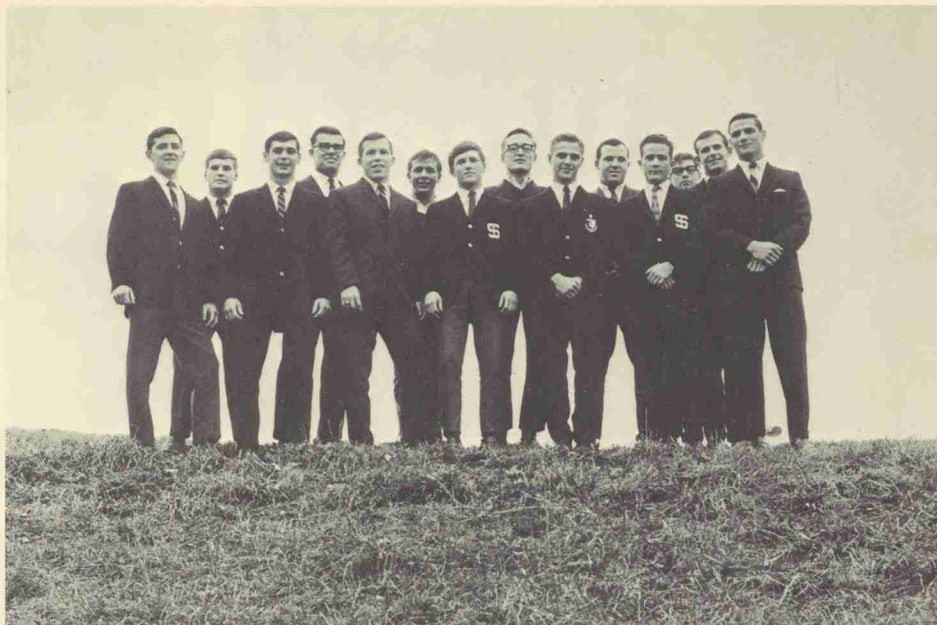

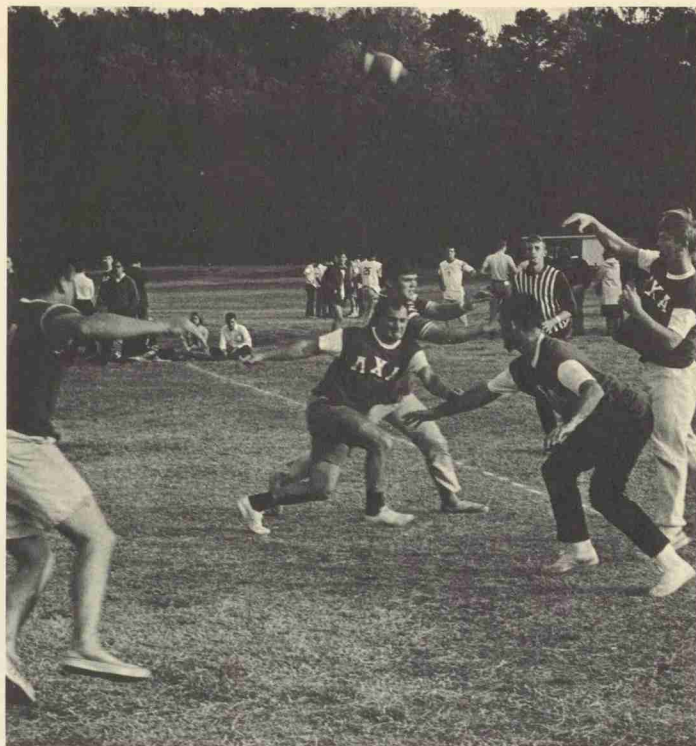

COACH NORMAN CHAMBERS, MANAGER BILL WALKER, BOB WICKHAM, JIM WALKER, JAY GINSBURG, KEN TROUTMAN, STEVE SMITH, MICKEY CORN, PORKY BYRD, BUNNY COWARD, DENNIS CUDDY, RAY STEIN, HARLEN GREEN, LEO FULLER

Wrestling is a good way to hold down a tendency to overweight. Straining your muscles every afternoon against a man of equal strength is practically a guarantee of keeping fit. It is not, unfortunately, a guarantee of winning all one's matches. Unless you are from Maryland. This year, as in all the past fourteen years, the Terrapins won the ACC championship. In the conference championships only State's Greg Hicks kept Maryland from winning every weight class.

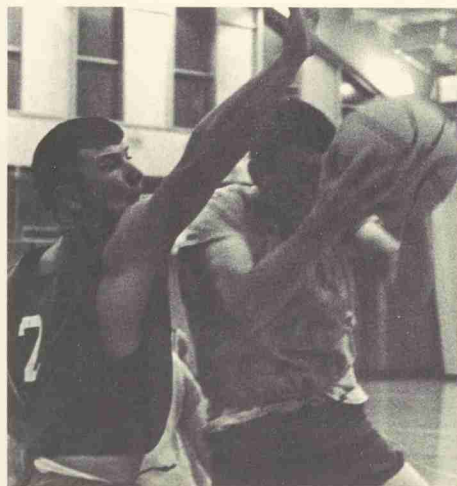

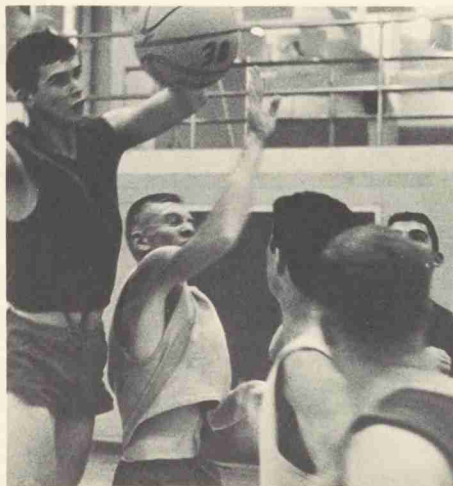

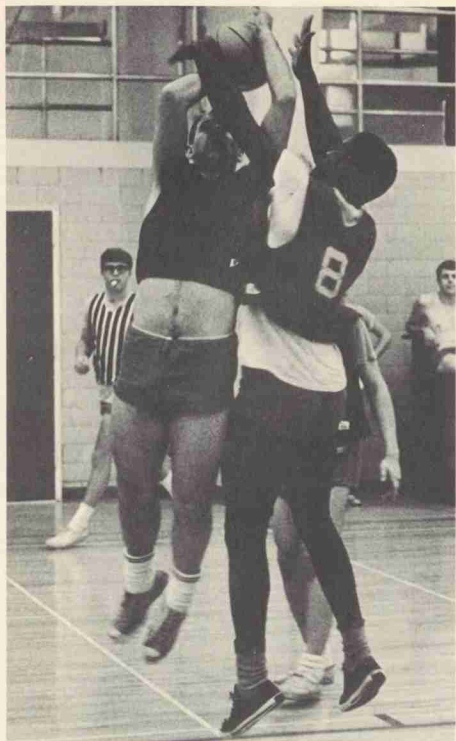

BOB LEWIS, STEVE DICKSON, ALLAN BRAWLEY, RAY ST. CLAIR, JIM HAVARD, PAUL CRAVEN, MAC PAGE, BOB HARRY, P. J. SMITH, PHIL KANOY, TOM GERRITY, PAUL KINZIE, DICKIE BOLIN, MIKE COUCH. ABS: ROGER VAN NOTE, GREG HICKS, RALPH HAMILTON

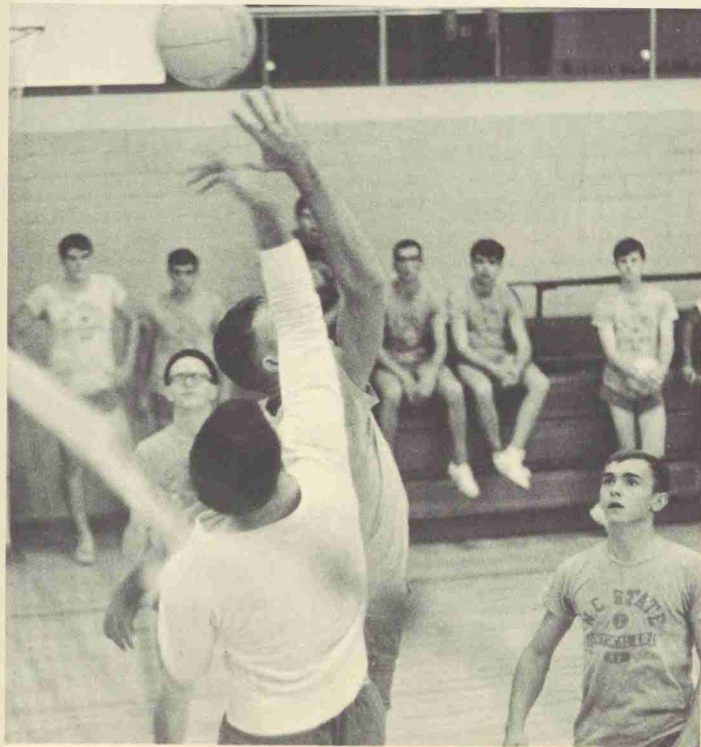

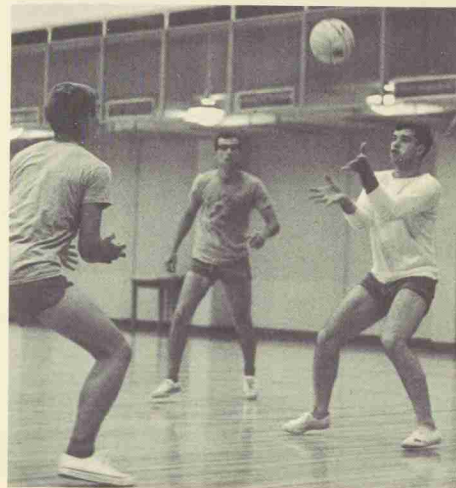

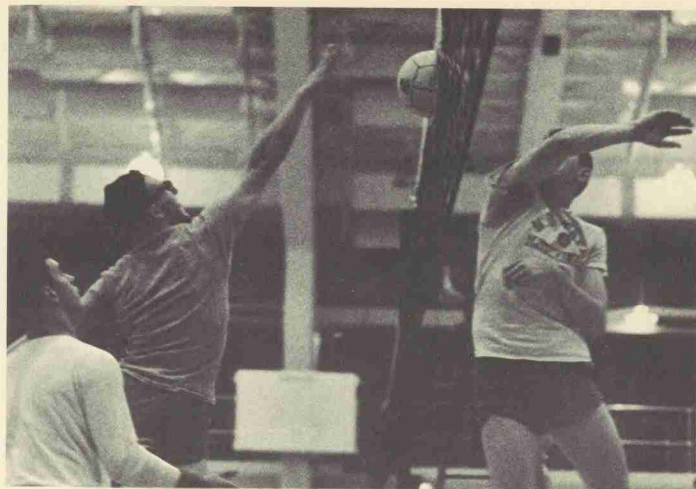

Intramurals is a special world with something for everyone, no matter who you are. Ping pong is the national sport of one country, but a foreign student at State can keep up with national sport in intramurals.

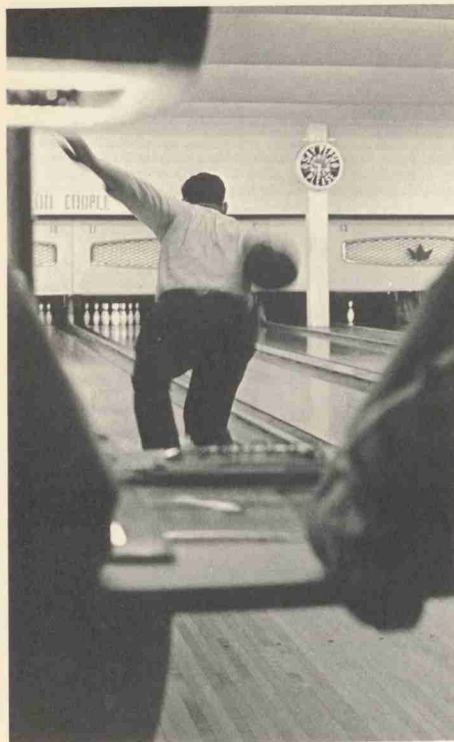

The rest of intramurals is less arcane; there isn't any roller skating competition, but few other sports are left out. The big deals are touch football, basketball, and bowling. Fraternities and dormitories fight it out for the overall title given to the team with the best record in all sports. Off-campus types find their own leagues, less closely knit, but equally hard fought. Some teams are good enough to compete in intercollegiate competition, but whether a team or player is very good or quite inept, it or he is guaranteed that something or someone can be found to give him good competition.

Extramural intramurals are probably unique to the Big Four. The intercollegiate intramurals have been found for about twenty years, with students from Duke, State, Wake Forest, and North Carolina meeting every May for competition in a dozen or so spring sports plus riflery and skeet.

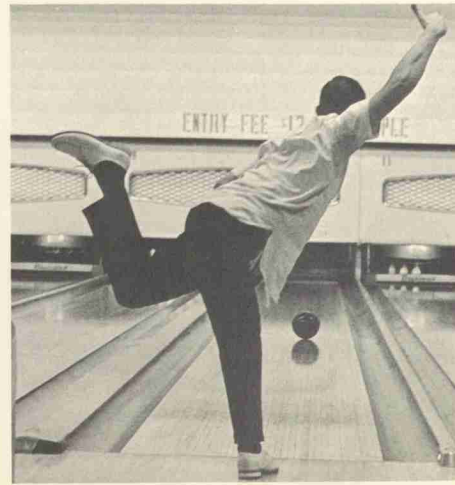

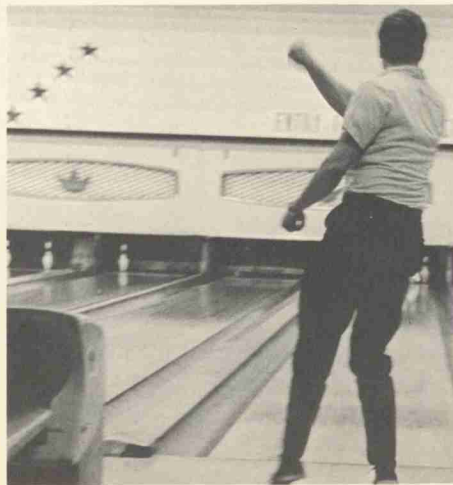

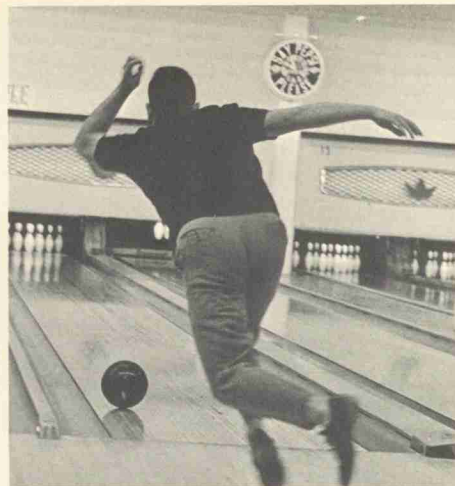

State has been winning the championship about half of those twenty years, and annually sends a couple hundred men to the competition at Big Four Day.

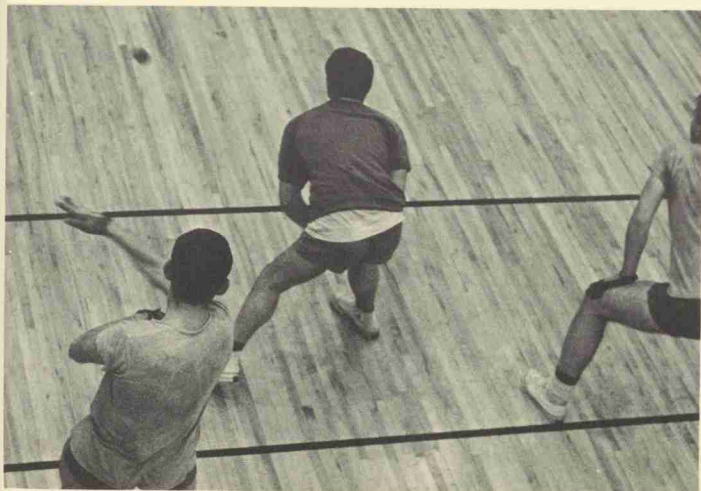

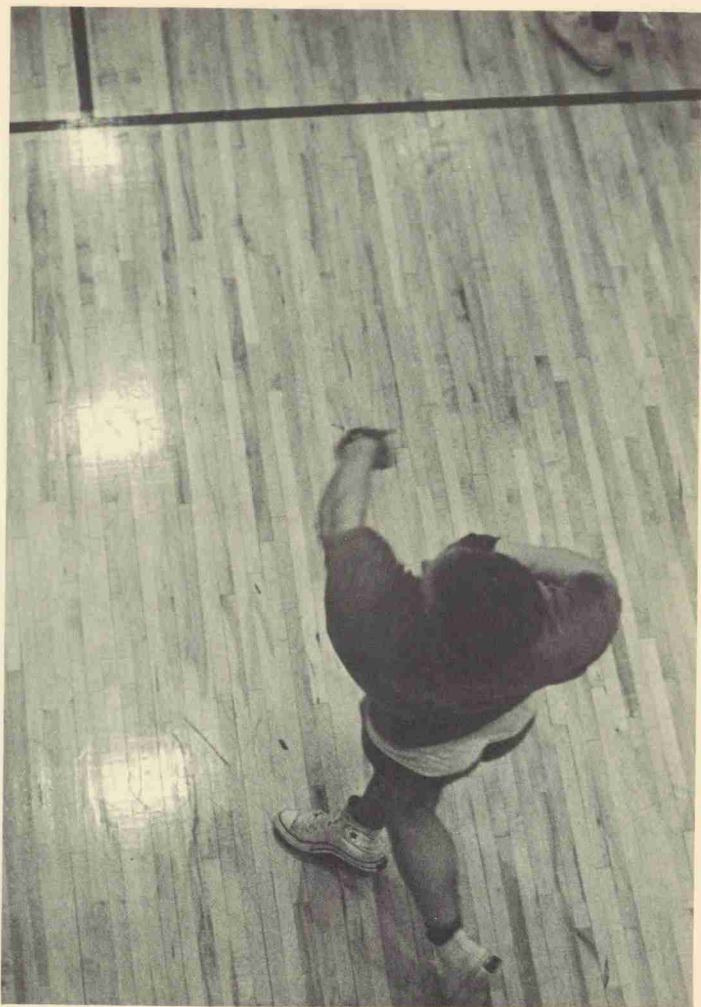

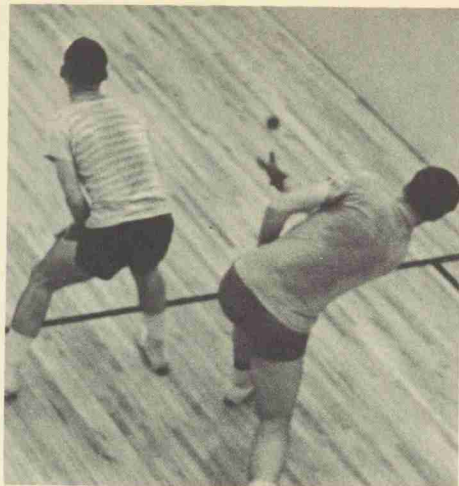

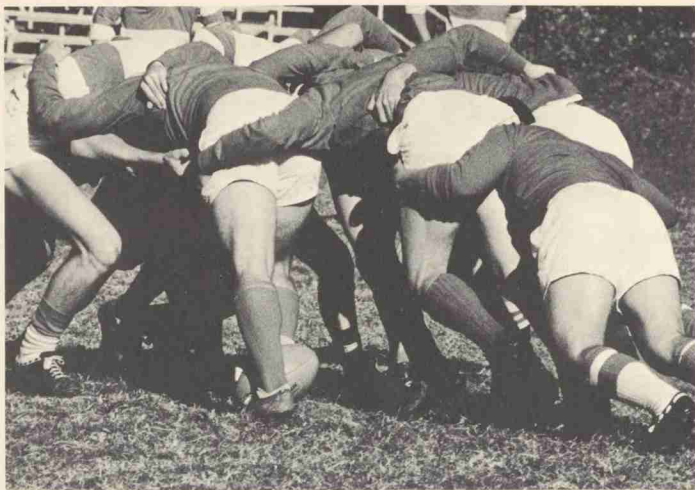

4,000 men and a few girls take part in intramurals at State. On some days there are as many as 40 basketball games. Some weeks see 100 football games. Before a man graduates from State he is almost certainly going to compete in intramurals at one time or another.

Carmichael Gymnasium keeps track of these and of participants in other intramural sports. It features basketball courts, wrestling, boxing, weight, fencing, and gymnastics rooms, volleyball, handball, and squash courts, classrooms, a practice putting green, olympic swimming pool and auditorium, soccer, football fields, golf practice area, track, archery range, and skating rink. Other than that there is not much there, except athletic offices and dressing rooms, and not enough parking spaces.

For the lonely Briton at State far from the banks are braes of bonnie Doon or the plains of New South Wales a little bit of home in State athletics offers him solace.

Not for him the intricacies of two platoon football or the set piece action of baseball; no, better than a touchdown pass or a hotdog at the old ball game is rugby, a sort of sanctioned mayhem played by amateurs. For the past two years this unique sport has called expatriate Britons and curious Americans at State to some of the bloodiest combat seen in North Carolina since King's Mountain.

The team, which is a wholly student endeavor, plays mostly club teams since few other school have teams. Only hated Duke and Carolina of other area schools have faced State in rugby. So far none of the three has managed to dominate the others.

Rugby at State is completely unlike any other sport. It is the only one that has no non-student coaches, and though it is not disapproved by the athletic department, neither has it any direct connection with it.

ALPHA GAMMA RHO

Alpha Gamma Rho, a social-professional fraternity, prides itself in having a brotherhood made up of students whose main interests are either Agriculture or Forestry. Here at State, Nu Chapter has maintained a high scholastic ranking among fraternities, the result of earnest effort and hard work. Our house, though small, is ideally located only a few steps from the University. The brothers here at State feel the relative smallness does much to increase the fraternal ties formed during active membership. This year our brotherhood is striving to increase our membership while keeping the spirit of fraternalism as strong as ever.

With a combination of effort, fraternalism, and participation, the brothers of Alpha Gamma Rho feel able to rank among the top of the fraternities here at N. C. State.

JEWELL HILL

DELTA SIGMA PHI

Rho Chapter of Delta Sigma Phi was founded at N. C. State in 1915, making it one of the oldest fraternities on campus.

Situated among 7½ acres of tall Carolina pines and surrounded by the Raleigh Golf Association, this picturesque setting is unique to fraternities in this area.

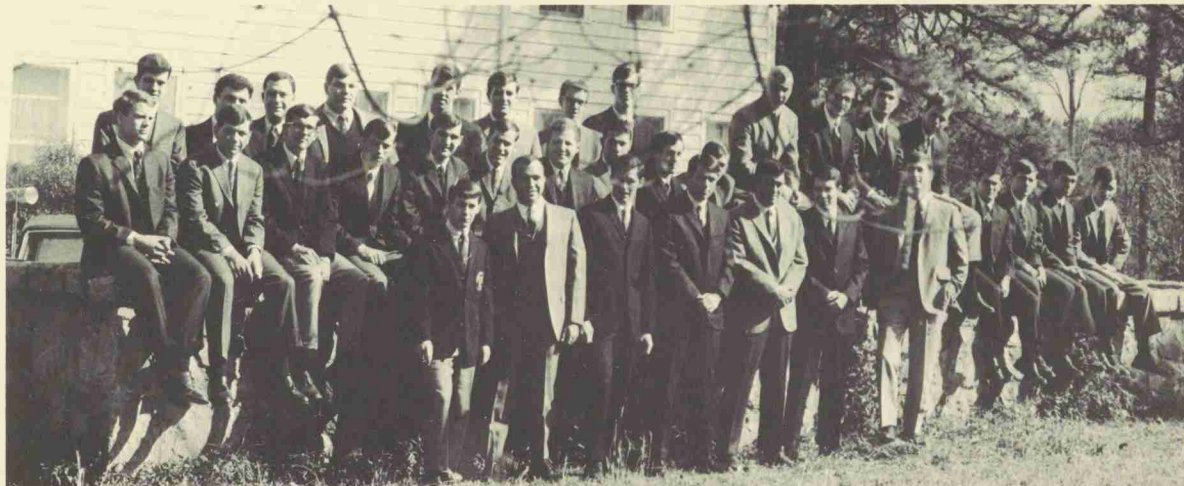

Throughout the year Delta Sigs are engaged in various social events. One of the highlights of the fall

was Homecoming, when many of the alumni came back to participate in the activities of the week-end. A Christmas party honoring the parents of Delta Sigs was held this winter. Many of the school's faculty and administrators, along with some state legislators, help to welcome the parents to Raleigh. The brothers are looking forward to the Lawn Party, Sweethearts' Ball, and especially the Sailor's Ball, a convenient opportunity for many to grow beards.

BETTY CARRAWAY

Three men in a Y. M. C. A. Bible Class at the University of Missouri became friends in the fall of 1904. By the following spring, there were eleven members. FarmHouse Fraternity was founded in 1905 by seven of these young men, dedicated to their chosen vocations, to their university, to their country and to their God. The fraternity has chapters mainly on agricultural campuses.

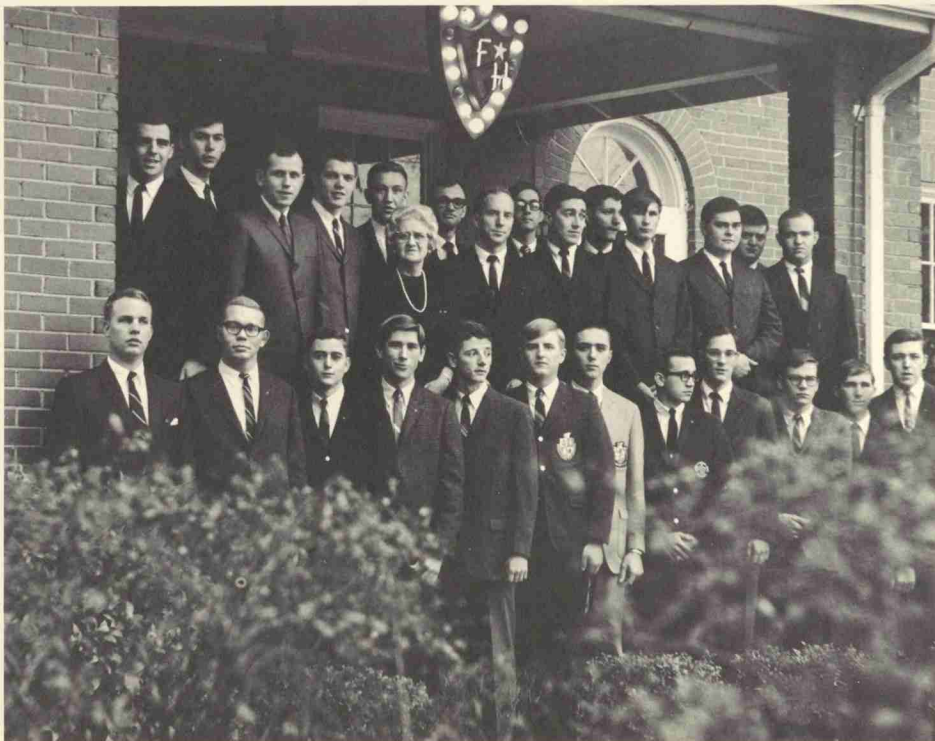

One unique aspect of FarmHouse is that no drinking is allowed at any FarmHouse function or on fraternity property. Our men strive to fulfill the motto, "Builders of Men!"

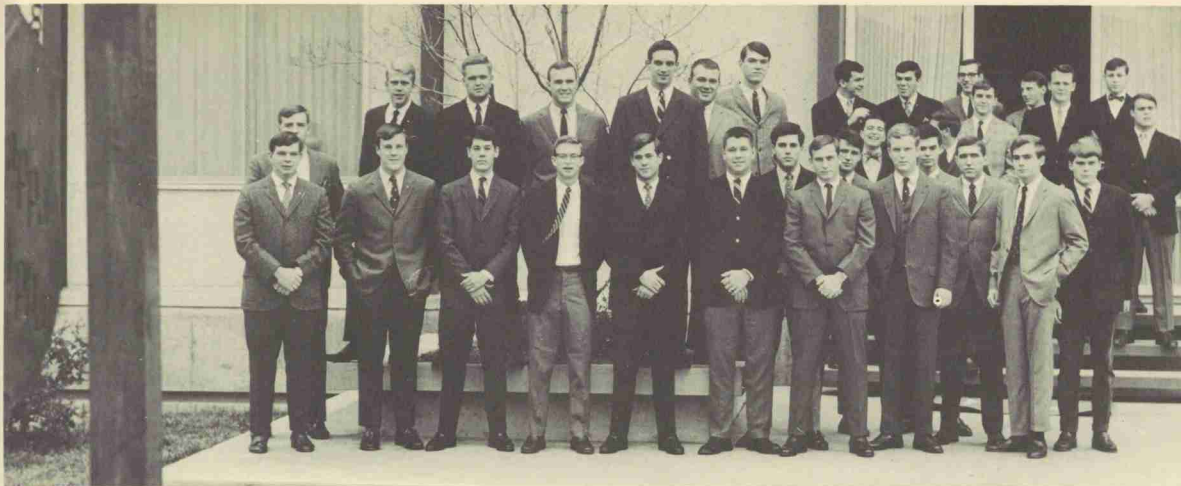

FarmHouse men are justifiably proud of their Fraternity, its national records, and the noble profession which they serve.

Kappa Alpha was founded in 1865 in the spirit of Robert E. Lee and in the traditions of the Old South. We at North Carolina State have thrived on this basis since 1903. To each individual our traditions are special and cherished and to each these traditions are in some way motivating. Through the heritage of gentlemanly honor Kappa Alpha strives to impart to its members the virtues of consideration, integrity, and respect in and of all things worthy.

As stated in our pledge manual, "Kappa Alpha seeks to make a permanent contribution to strong, clear, useful manhood by inoculating in young men those gifts and graces and virtues that shone brighter in the life of Robert E. Lee."

SHERRILL GRIFFIN

Kappa Sigma is one of the oldest existing fraternities, for it was founded in 1400 at the University of Bologna in Italy. On December 10, 1869, at the University of Virginia, Kappa Sigma was established in America. Since then it has grown to over 117 active chapters in both the United States and Canada, with some 90,000 active alumni. Some distinguished Kappa Sigs include coach Norm Van Brocklin, auto racer Phil Hill, and such late and great Americans as Lowell Thomas, Edward R. Murrow, and Estes Kefauver. The National Fraternity also has one of the largest Scholarship Endowment Funds in the United States.

The three-story fraternity house, the highest on the row, is the only house to provide all two-man rooms on two floors completely separate from the social area. The fraternity has just instigated a rigorous scholastic program, along with our ever-active social program for which the Kappa Sigs are widely known.

Take a deep breath, close your eyes, whisper a prayer, and move on. College—here we come, back again or for the first time. It really doesn't matter, for we were born here and here we'll be buried (it's been forever already). Which seems rather strange, for we were freshmen only yesterday and tomorrow begins our senior year.

Founded at Boston University in 1909, Lambda Chi Alpha has since grown into a fraternity of national prominence. More than 160 chapters are maintained

at colleges and universities both in the United States and Canada, making Lambda Chi the second largest in the fraternity world.

Lambda Chi naturally has a tremendous influence upon its members. To us, this is *home*. Four years are here today and gone tomorrow; but through it all we are tied together. Maybe we'll meet again in another race some other time, but until then Lambda Chi has made the whole rat race worthwhile, more exciting, more meaningful.

PI KAPPA ALPHA

ELEANOR FISHER

Pi Kappa Alpha—the friendly fraternity—ceased to be a local fraternity a year after its founding. Our precepts have spread to the entire nation: one can travel from coast to coast and stop everyday at a different chapter house.

This year the District Six Convention was held in Raleigh. All the Pi Kappa Alpha Chapters in North Carolina met to hear such famous alumni as Chancellor Caldwell, Ruffin Bailey, and our National President Don Dickson.

Alpha Epsilon Chapter at N. C. S. U. is having another successful year. The Pike founding spirit—"Congeniality based upon character"—leads us to serve our community by heading up a cerebral palsy campaign and giving parties for the orphans.

PI KAPPA PHI

From our beginning in Charleston, S. C., on December 10, 1904, we have grown into a fraternity of over one hundred undergraduate and alumni chapters. Although characteristically Southern, Pi Kappa Phi is national in scope.

Pre-school clean-up and Rush Week initiated Pi Kappa's fall semester activities. Two combo parties, combined with some serious moments, made for a full measure of fraternity life.

An important event was the district meeting held here at Tau Chapter by all the Pi Kappa Phi chapters in North Carolina. An alumni banquet, with one of the more prominent Pi Kappas in North Carolina, Governor Dan Moore, instigated the formation of an alumni chapter here in Raleigh.

BETTY HUTSON

Sigma Alpha Epsilon is the oldest national fraternity to be founded in the South and the only one to maintain continuing existence during the Civil War. It has built for its members a heritage and tradition which are ever demanding but fulfilling.

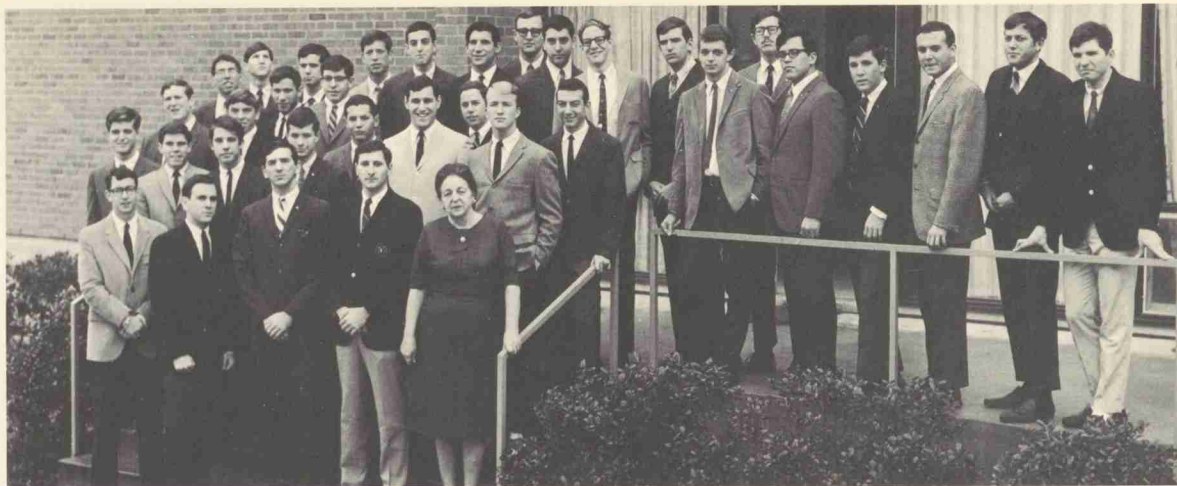

SAE's entrance into the fraternity sphere on the N. C. State campus came late — in 1947. However SAE, welded together and inspired by national heritage, met the challenges of the school and fraternity ideals and quickly built itself into one of the most active chapters on campus.

SAE pledgeship has been rebuilt in order to adapt the student to the pressurized environment of an expanding university. Both mental and physical torments have gone to their graves; now the wedlock of propriety and responsibility are being stressed.

Something new within the fraternity system has been introduced by the SAE's in the form of a *Little Sisters Club*. This group of girls, chosen from surrounding schools for their loyalty and love for the house, has served us as workers and "Sisters."

"Fast and Firm is Our Union . . . Strong Its Ties That Bind Held by Links of Friendship Together, Now and for All Time . . ."

The Sammy Steamrollers, after a record third place finish in the IFC Athletic standings last year, are in the midst of a rebuilding program. However, with our usual strong spring sports, we expect to make a good showing in IFC competition. Homecoming stands out as the fall's most memorable weekend. The Sammy float was undoubtedly the best in the parade. The New Year started off in grand style with our Alumni Dinner in New York City during semester break, and our Annual Parents' Weekend in February.

"Ever Lasting, Ever Faithful, Ever Staunch and True, Stands the Brotherhood we formed in Sigma Alpha Mu."

SIGMA ALPHA MU

In 1854 six members of the Deke Fraternity at Miami University at Oxford, Ohio, left that fraternity. A seventh man was picked up and thus Sigma Chi was founded. The reasons for the separation and the characters of these seven men carries over into the ideals and purposes of all Sigma Chis today. Such varied individuals as Barry Goldwater, Senator J. William Fulbright, and commercial magnates T. G. Balfour and Charles Mitchell still enjoy close relationships with Sigma Chi.

Sigma Chis here at State retain such prominent positions on campus as IFC President and Treasurer. Three members on the HBC, members and the chairman of the CCB, chairman of the SP, Junior Class President, *Technician* Business Manager, Freshman Class Vice-President, and various positions of the State Student Legislature.

ANN COPENHANER

Founded at the Virginia Military Institute in 1869, Sigma Nu has since grown nationwide into one of the leading fraternities in both prominence and numbers. By instructing its members in the ideals of our founders, ideals known to us as the way of honor, Sigma Nu continues to seek those who believe that each individual has within him the power and drive for self-improvement.

Beta Tau Chapter of Sigma Nu was founded at State in April, 1895, thus making it the oldest fraternity on campus. Highlighting our social program is the annual "White Rose" beach weekend held in the spring. Culturally, Beta Tau conducts a contemporary issues speaker series during each fall semester, named after a prominent alumnus, former Governor O. Max Gardner. In the words of a former chapter commander: "We are unique because our ideals are unique; growth seeks us because our programs provide a foundation to support growth. Think broadly and you fit our size."

SIGMA NU

ELEANOR SQUIRES

Sigma Phi Epsilon was founded at the University of Richmond on November 1, 1901, and since its inception has grown to be one of the largest national fraternities. The North Carolina Beta Chapter was founded at N. C. State on March 4, 1905, and from that time over six hundred men have shared the ideals upon which the fraternity is founded.

Since moving into our new house in 1964, Sigma Phi Epsilon has strived to advance with the changing framework of a college fraternity. New emphasis is being placed on the development of leadership potential for the betterment of the fraternity, the university, and the individual. To this end Sigma Phi Epsilon strives to prepare a man for the responsibility of his position as a member of society.

The members of a good fraternity must be men of diversified talents, and the worth of a fraternity is measured by its ability to develop these talents. We believe that a man will have been made better for having been a member of Sigma Phi Epsilon.

On January 26, 1897, Miss Charlotte N. Malotte, the Professor of Latin and French at Vincennes University, spoke to the student group at the chapel hour. She took for her subject, "College Fraternities." A month passed. Then, on the afternoon of February 26, one might have seen four students making their way to the English room on the second floor of the old college building. Sigma Pi was about to have its first meeting. When, after a long session, the meeting adjourned, Sigma Pi had been born.

Sigma Pi National at Vincennes University, Vincennes, Indiana, granted a charter to Rho Chapter at N. C. State University in May, 1921. Since then, Sigma Pi has remained in the historical house on Clark Avenue.

The annual "Peter Pops Day" is a Thanksgiving meal and entertainment for the underprivileged children of Wake County, has has been observed since 1943. An Easter Egg Hunt for orphans is another of Sigma Pi's many civic activities.

"Just a few more minutes, folks, and the girls will be back for your enjoyment. But while you're waiting step up and win! win! win!" This was the atmosphere of the 'Theta Chi A Go Go' Campus Chest Carnival booth last spring as we walked off with more than our share of awards. Theta Chi has been go-going since. Having also won the Vietnam Blood Drive, the fifteen graduating seniors at the annual Senior Banquet in May could look back on a rewarding career as Theta Chis.

Theta Chi, realizing that the fraternity's place in the university has changed drastically, has taken the initiative to be of service in making the student into a responsible citizen, placing emphasis on individual participation. Our athletes brought us into the playoffs in football, and second place in volleyball.

Being a social fraternity, we of Theta Chi usually find time to occasionally enter a frog jumping contest, (second place in North Carolina's annual contest), or play host to the other nine regional Theta Chi Chapters for our annual Mason-Dixon Jubilee.

THETA CHI

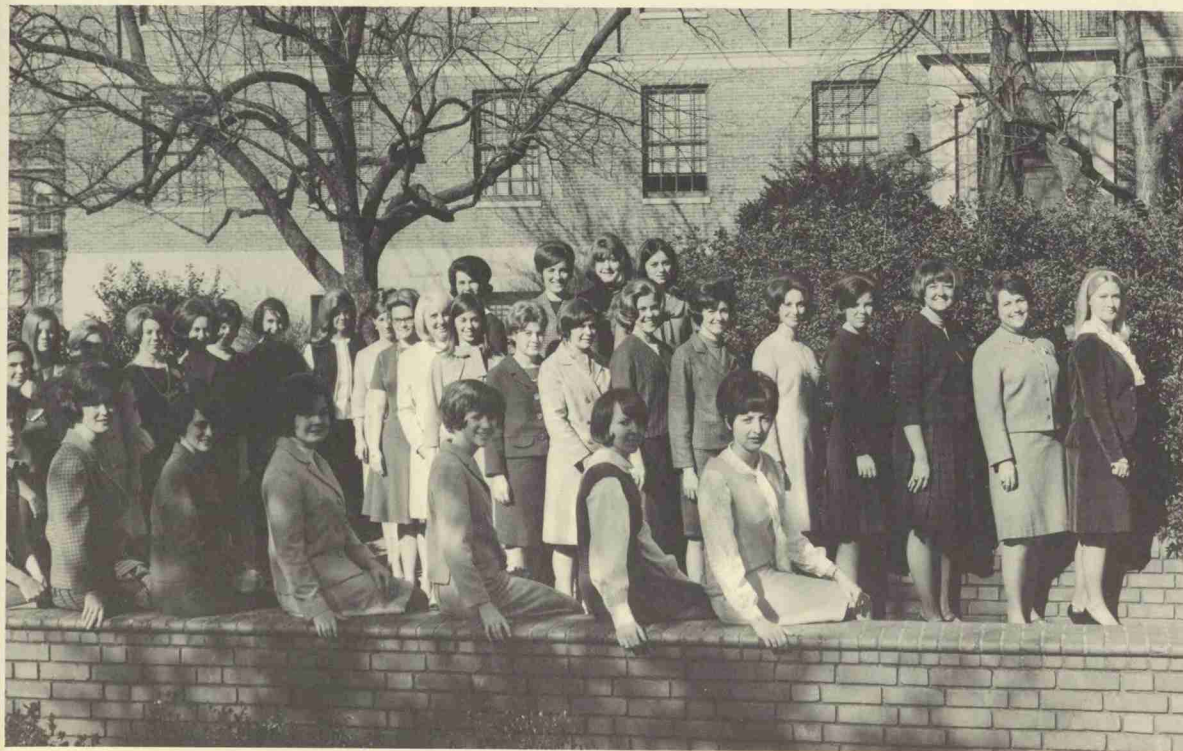

SIGMA KAPPA

Sigma Kappa has been a part of the North Carolina State University campus since 1960. From the first group of ten initial members, the Gamma Phi Chapter has grown to a membership of 37 girls, all active in various phases of campus life.

The Chapter at State closely identifies itself with the original chapter founded at Colby College, Maine, in 1894. Both chapters originated on a predominantly male campus and were the first sororities

at the colleges.

Sigma Kappa has the distinction of being the only sorority at State. Added to this, its members include the 1967 Homecoming Queen and two members of her court, the president of WCCB, the secretary of Student Government, three cheerleaders, several Student Government senators, and many members in honoraries from Phi Kappa Phi and leadership ones on down.

The democratic process, like Mom's apple pie, is an aspect of Americana which seems to permeate all areas of American life, including the management of affairs on a university campus. State's own political world possesses the somewhat dubious distinction of paralleling (or perhaps parodying) national power politics—including a two-party system and deadlocked meetings. The distinctly American apathy toward elections is also shared by State—only one out of every five students bothers to vote.

The results are, understandably, less than inspirational, generally consisting of a number of resolutions denounced by *The Technician* and ignored by the students. Yet Student Government did have one shining moment this year: a boycott against Slater (yech!) Foods (?) Service which pricked the interest of almost everyone on campus.

"The earth is not a mere fragment of dead history, stratum upon stratum like leaves of a book, to be studied by geologists and antiquaries chiefly, but living poetry like the leaves of a tree, which precedes flowers and fruit,—not a fossil earth, but a living earth; compared with whose great central life all animal and vegetable life is merely parasitic."

During the Neolithic era of Man, there appeared one who had discovered the magical adjunct of soil and seed. There also came another who had learned the ways of animals and had made them tame.

From those distant ancestors, we have inherited a continuing need for sustenance from the earth and its creatures. And, in part, we retain some of their awe: there remains a somewhat spiritual affinity between us and our food—we are not too distant from them in that aspect. Our sophistication may have outdistanced their belief in sympathetic magic, but a simple truth still holds: Man yet lives close to the soil. No degree of sophistication can obliterate that fact.

No more than it can obscure the shrinkage of our earth, the steady disappearance of tillage and pasturage—terms for a problem never considered by our Neolithic ancestors. It is and will remain a problem of considerable import to us. The union of Life Sciences and Agriculture was not an altogether fortuitous one.

"What of architectural beauty I now see, I know has gradually grown from within outward, out of the necessities and character of the indweller, who is the only builder,—out of some unconscious truthfulness, and nobleness, without ever a thought for the appearance; . . ."

On the eighth of June, 1966, at Spring Green, Wisconsin, the United States issued the two cents postage stamp in its Prominent Americans series. Featured on the stamp was Frank Lloyd Wright and a portion of the Guggenheim Museum.

We can not cavil over the honoring of the late architect, but we may lament its implication — that someone on the Potomac considered Wright a popular enough name for inclusion in the series. The use of the museum as background strengthens this assumption. Who has not heard of the Guggenheim? As an honor, though, the selection of Wright is vaguely suggestive of a citation from the Sunset Hills Wednesday Afternoon Bridge Club and Art Society. It appears even more so if we note other popular aspects of our society commemorated during the same year: the Humane Treatment of Animals, the Circus, Women's Clubs, Johnny Appleseed, and Lady Bird's Beautification Program.

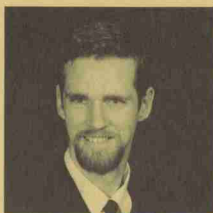

What does it matter that we fail to grasp the essence of a man's work, as long as we can roll his name like a jawbreaker in our mouths? It matters not. Other than it is our loss.

The true artist, whatever his medium, will remain apart from us, challenging us with his aloofness. Something which he sees now, we may see eventually, but by then he already will be looking elsewhere. Ours always will be hindsight to his insight.

"Tom Hyde, the tinker, standing on the gallows, was asked if he had anything to say. 'Tell the tailors,' said he, 'to remember to make a knot in their thread before they take the first stitch.' His companion's prayer is forgotten."

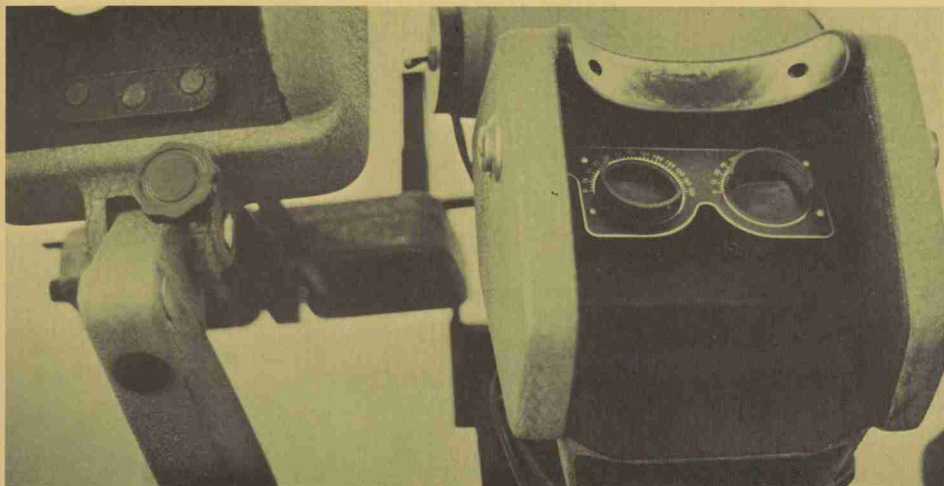

Very few of us today are Miss Doves, nor would we care to be. That goodly lady — remember Jane Wyman in the role? — belonged to another era, one which afforded her the time for all the little niceties which made her the paragon of a dedicated and self-sacrificing schoolmarm. (Does anyone recall her grading student papers in those gloriously technicolored scenes?)

It is equally unlikely that many of us will be faced with disciplinary problems of the type which Glenn Ford knuckled through, or the glamorous diversions which kept Jim Franciscus too preoccupied to worry about certification. No, not hardly.

What, then, can we expect? Aside, that is, from the numerous hankies required by Miss Dove, or the bruised knuckles acquired by Ford, or the starlets which desired Franciscus? Possibly nothing more than how to remember whether Mrs. Brown's little Willie is #437296, with the freckles, or #437300, with the braces on his teeth.

"We have constructed a fate, an Atropos, that never turns aside. (Let that be the name of your engine.) Men are advertised that at a certain hour and minute these bolts will be shot toward particular points of the compass; yet it interferes with no man's business, . . ."

Once it was a big occasion to go down to the station and watch the trains go through. Today, they pass among us and we seldom take note. Great-grandpaw can tell you about when So-and-so's horseless carriage backfired, frightening all the chickens out of laying for a month. Today, the chickens we see are Kentucky Fried. And when was the last time your Detroit Dobbin backfired? Not many years back, we held our breaths while What's-his-name? was in orbit. Now, we get a capsule report on the news round-up, or we glance at headlines in passing.

The diesel replaced the chugging woodburner. So-and-so's horseless carriage long ago rusted in the south pasture. That first space vehicle was obsolete before blast-off. And we have since probed the dust on the Moon. While, with incredible swiftness and precision, we continue to evolve toward our ultimate goal.

That the dedication and singlemindedness, the skill and knowledge of the modern breed of engineers makes possible this progress is unarguable. Our debt is inexpressible.

"It is remarkable what a value is still upon wood even in this age and in this new country, a value more permanent and universal than that of gold. After all our discoveries and inventions no man will go by a pile of wood."

"Why should we be in such desperate haste to succeed and in such desperate enterprises? If a man does not keep pace with his companions, perhaps it is because he hears a different drummer. Let him step to the music which he hears, however measured or far away. It is not important that he should mature as soon as an apple tree or an oak. Shall he turn his spring into summer? If the condition of things which we were made for is not yet, what were any reality which we can substitute? We will not be shipwrecked on a vain reality. Shall we with pains erect a heaven of blue glass over ourselves, though when it is done we shall be sure to gaze still at the true ethereal heaven far above, as if the former were not?"

"Our notions of law and harmony are commonly confined to those instances which we detect; but the harmony which results from a far greater number of seemingly conflicting, but really concurring, laws, which we have not detected, is still more wonderful."

A philosopher of sorts, one of the New England Transcendentalists, once said that all words expressing moral or intellectual facts, if traced to their roots, would be found symbolic of natural facts. Those natural facts, in turn, were symbolic of spiritual facts. His final conclusion implied that words were also symbolic of spiritual truths.

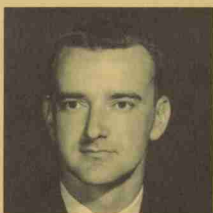

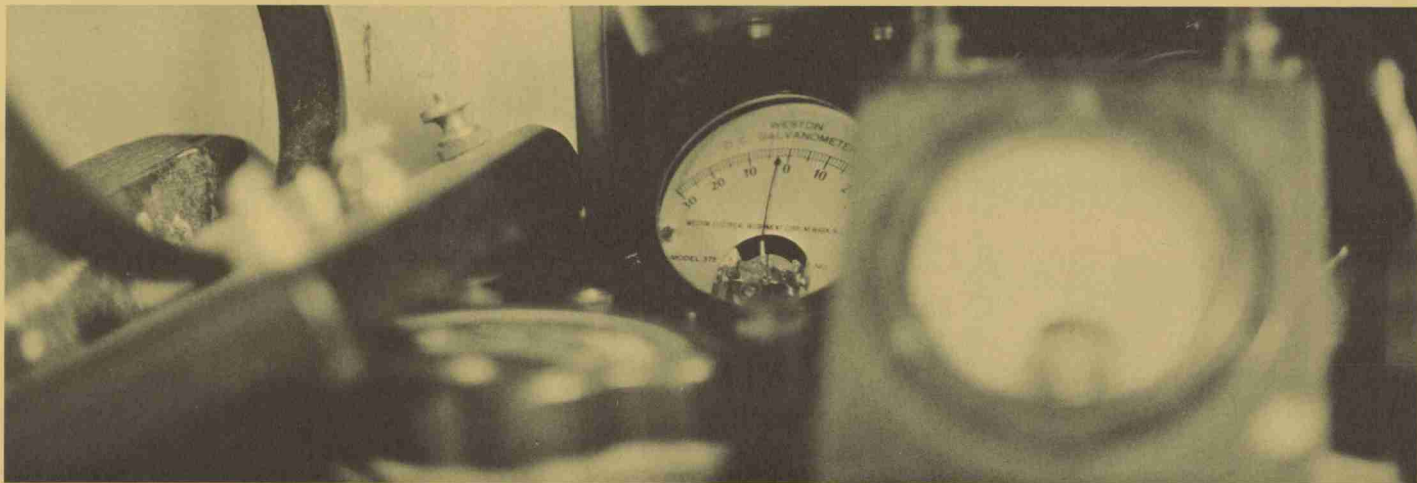

With that in mind, let us imagine him on a guided tour of the School of Physical Sciences and Applied Mathematics.

"No, no, Mr. E—, there is more. We still have to show you the plasma physics laboratory. And there is the radio-chemistry laboratory. As well as our one million volt Van de Graaff accelerator, and the two analog computers—the GEDA and Donner. Nor must we miss the IBM 1620 digital computer, or the IBM System 360 Model 30—that's connected by telecommunication lines to the Model 75 at the Triangle Universities Computation Center. Then we'll show you the Varian Associates HA-100 high resolution nuclear magnetic resonance spectrometer. And the upper atmospheric physics laboratory. And the biomathematics and biophysics laboratory. The ultraviolet-infrared-visible spectroscopic laboratory. The heterogeneous nuclear reactor. The X-ray laboratories with diffraction and radiographic equipment. The Beckman Model E analytical ultracentrifuge—what did you say? The what? . . . Oh. Let me think—I know we must have one . . . Oh, yes—around the corner. The door with MEN on it. MEN. M-E-N—like in *Homo sapiens*."

tex'tile

"Perhaps we should never procure a new suit, however ragged or dirty the old, until we have so conducted, so enterprised or sailed in some way, that we feel like new men in the old, and that to retain it would be like keeping new wine in old bottles."

And at the other extreme, there is the familiar tale about the Emperor and his new clothes. Remember that one? Remember also the clear-eyed child's exclamation when the Emperor, deluded and denuded, paraded his new finery through the streets? "But he's naked!" Or words to that effect.

Not many of us share a predilection for old bottles, nor would most of us care to join the Emperor's parade — despite the dictates of current fashions, or the availability of new materials of sheernesses comparable almost to that of the Emperor's new suit. Our tastes generally are more conventional.

Even so, we live our lives swatched in a multitude of textiles, and have done so since Man first gave the pelt back to Bruin — or to his wife for Christmas. Whether the fabrics are woven or knitted, whether the fibers are cotton, wool rayon, or one of the many new synthetics, whatever our places along the continuum between Emperor and Man of Concord, textiles and textile products satisfy a fundamental human need, as well innumerable fancies.
