HOFMANN RECALLS ELEVEN SENIORS FOR FOREST WORK

Group To Be Placed at Pisgah National Forest and Nanta-hala National Tract

MEN RETURN NEXT WEEK TO START WORK AT ONCE

ince Only Eleven Men Are to Be Graduated in Forestry This Year, Possibility Looms That Juniors May Also be Called Upon to Take Forest Jobs; Sal-ary Fixed by Government at \$167 Per Month

Prof. W. N. Hicks was made chaplain and Prof. A. M. Fountain was named

historian. Pine Burr held a banquet together with Tau Beta Pi last Priday night. The joint banquet is the beginning of a move to foster better relationships between campus societies. Taiks and discussions to that effect were made the bennet.

E. B. Crutchfield was past pro-

Alpha Sigma Sigma

Alpha Sigma Sigma On the Alpha Sigma Sigma page of the Agromeck just issued, the following statement is pre-sented: "The first national con-vention of Alpha Sigma Sigma vas-held this year in the office of the Arriculturist. The conventogs was held for the purpose of electing national officers and revising the constitution. It lasted still the Duke delegation arrived." Upon reading the statement on the officer of the Duke annual, the editor of the Duke of a far Mife, and with Carolina State College in 1996. The place of its founding was ideal for such no order. Amid the surroundings of far Mife, and with the ma-lority of the students just fresh from the best farms in the state they are well capable of recog-niting and selecting men for an order of this type." \$167 Per Month
All seniors in forestry at State College were recalled from an extended trip through the southeast Wedneeday, by Dr. J. V. Hofmann, head of the forestry solution with the present were in Arkansas when the Pikel National forest near Ashe Ville, and the Nantahia National Forest resear Ashe Ville, and the Nantahia National Forest near Franklin, at salaries of \$167 a month each.
The mee were in Arkansas when the present unior forester, over inexperiencem unior forester, over inexperiencem who were recently given worth. Carbor Market, Croker, A. B. Hafer, M. M. Riley, A. L. Stare, W. J. Clark, R. A. Wood, L. L. Hurt, G. D. Pettigrew, Mark Mitteell.
Since there are only 11 forestry in forest in the forest the Starts.

Contest at Regina, Canada Team Has Won More Contests Than All Other Collegiate Crops Teams Since 1923 IN COTTON BALL BROOKS APPROPRIATES

One outstanding feature of the Exchange issue of the Waiangan which will be issued Wednewday is that the cartoon illustrations throughout are all the work of Dave Morrah, the editor. A description of French customs and habits by Lesile Vipoud, a former Waiangan editor; "Acco-nautics at State College," by Gienn Nyei and a true story by George A. Hornbeck, are features of the aumher.

Sunday night four girls drove by South Dormitory in an open roadater. As they passed one of the corner rooms, they caught a glimpse of a student within, pre-paring to rotire. The roadster was turned about, and slowly ap-proached again the vicinity of the open window. Staddonly from two adjacent

GARAGES NEEDED

President Brooks suggests an improve ent on the ent use of the campus as an outdoor garage which will improve its appearance to a high degree and will give owners of automobiles and motorcycles a proper place to carry on their activities.

Doctor Brooks mentions the "front door workshop" as the greatest eyesore which can be presented to visitors on the grounds adjacent to the dormitories, and asks that the Student Council members help to correct the circumstance next year by furthering a plan for allotting an area of ground for the use of those wishing to scatter machines and parts about.

Clearing the grounds of the school of these objects Clearing the grounds of the school of these objects so detrimental to the general appearance of an otherwise presentable campus holds no extreme diffi-cutties, but the removal of them will present other problems which will necessitate further planning. The grounds could not be in a central location, and therefore machines would be far removed from some dismantlers, leaving their property unguarded and open to theft by outsiders and other students alike. Those motor parts and other machine parts left on the grounds would be subject to weathering for lack of shelter now afforded by dormitory rooms, for although dormitory rulings prohibit the housing of these materials, an infraction of such rules is much less important than the destruction of integral ma-chine parts, to those who respect machimery.

less important than the destruction of integral ma-chine parts, to those who respect machinery. A group of garages, or similar shelter for students owning ears, to accompany any restrictions placed on the use of campus grounds as open air garages would be welcomed by those men. A nominal charge could be made for their rent, and such jurisdiction as would be necessary placed over them. The students could use these for their scenes of operation, and would in this way be protected from the on-slaughts of any possessive urge on the part of others. The simple beauties of nature, with the ugly products of man's handiwork removed would lie bare, however, for want of suitable contrasts should the ma chine be entirely removed from the campus.

BACK TO TREES

Now that the government reforestation move-ment has advanced to the stage where it begins to bring new hope to graduating forestry students, and perhaps creates a more helpful feeling in those other students not taking forestry, but anxious to know what a turbulent world holds in store for them, it may be we the trees. well to look back at mother nature's children,

the trees. Not many years ago when settlers came into the country, a tree was an impediment to be blasted and carried to firesides, there to give out necessary light and heat while the ground on which the tree had stood was cultivated. The beauty of a tree was not to be admired, for there were an infinite number of others like it. The mind was practical—little notice was taken of those great giants which fell so easily when hit. when hit.

Then the landowner began to notice that where the tree had fallen water gathered, and without the tree to drink its daily draught, more water would gather and drown beauty. Something was missing on the hand that human handiwork could not replace, and the tree cutter repeated. The scarcity of wood became evident, prices soared, and trees were much in demand by lumbermen. They transferred their activities into other nations, but there was always the hope that some day our land would again be the foothold for countless trees. Genservation move-ments were begun, and much discussion arose con-erring seedlings, transplanting, the clearing of roods of harmful asprophites, and the help of the individual in furthering the movement for aid of regrowth. Laws were passed in many states placing severe penalties upon any who might damage plants the land that human handiwork could not replace,

or trees, and mother nature once more found that he was capturing the hear's of her people. Then came the boom years of the past decade, and with them the talk of reforestation became more prevalent, without the government taking any out-standing action beyond the improvement of state parks, usually done in such a light as to appeal to the layman for his pleasure rather than merely as an act of kindness toward healing the sores of the razed carth. ragged earth.

ragged eards. It remained for depressed circumstances to show people where monetary values could be replaced by a highly sensitive knowledge of relative values and where the continual grubbing for money would be

forgotten. For now, when the citizen is down to his last cent, and streets, wharves, and houses hold no hospi-tality, he makes his exodus back into the forest where tality, he makes his alive. his health regained, and may once more be alive, his health regained, and cares forgotten under the spell of the clear incense of the open air.

INDIFFERENT LEADERS

The failure of at least a quorum of members of the House of Student Government to attend the meeting which was to have been held last week can be traced directly to a lack of interest which soon overtakes all too many officers in the many campus organizati

ganizations. Much of the indifference that has been displayed Much of the indifference that has been displayed in the past by these student representatives would never have been had their electors noted before selecting them their general attitude, and their actions, not as indicated by their conversation, but by their work in carrying out small jobs given them within their fraternities or clubs. A large part of the so-called leaders in activities are merely so in them only while the with the serving man are

the so-called leaders in activities are merely so in name only while the quiet, unassuming men are left to bear the brunt of work. If those voted leaders in campus activities were more limited in the number of offices they might hold, more concentrative effort would be applied to duties within their scope of activities, and organi-zations would rise to higher levels in both the eyes of students and leaders. As it is now most wom zations would rise to higher levels in both the eyes of students and leaders. As it is now, most men being elected are not long satisfied, but soon begin to branch out, until before long they are the control-ling influences in sundry fraternities which often are of but minor importance in the life of the school. It should be the duty-of men to consider their own qualifications before accepting nominations. They should contemplate other work which is being asked of these are the men their interest in the offer at

should contemplate other work which is being asked of them, and know their interest in the office at hand. They should not accept the office on the spur of the moment, mainly because they feel honored, but they should make up their mind right then, out of fairness to their friends, to do the office justice. They should judge from past experience their capa-bilities, and think over future and more desirable higher offices which may be offered tham on the campus and with which the point system may cause their present job to conflict.

A GOODLY CROWD WAS THERE

That a large audience will still attend a lecture at State College, was evidenced Monday when Dr. George Washington Carver, noted Negro scientist and educator, spoke before a crowd that filled Pullen Hall.

His discussion related directly to a phase of one It is discussion related directly to a phase of one of the engineering departments here, that of obtain-ing by-products from the lowly peanut. In his long career as a scientist, he has obtained from this legume

Circle as a construction of the lecturers that come here with a cut and dried conglomeration of facts and figures, Dr. Carver presented his speech in a simple, straight-forward manner so characteristic of the Negro race. The audience thoroughly appreciated his speech, as was shown by the ovation given him at the end of the cub = F. S. K. the talk .- E. S. K.

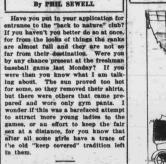

Editorial Comments

ATHLETICS AND EDUCATION

ATHLETICS AND EDUCATION The primary purposes of education are mental, moral, and physical development. The great educators have always held that it is detrimental to the well-being of the individual if either of the factors are neglected. A good education involves participation in athletics, as well as the pursuit of books. At this University there are ample facilities by which a person may develop his mental capacity. The library is very adequate, and the faculty is competent and willing. This part of the individual's education is well covered.

willing. This part of the individual's education is well The chance to participate in athletics is not so pro-nounced. It is quite true that none of the variity ath-letic squads are cut by order of the coaches, but only very small percentage of the students are willing to go out for the varsity. Of all the sportaticipate tensits is the most popular The intramural department provides competition in this sport, and many persons take advantage of this oppor-tunity. In the other intramural sports fair equipment, at least, is provided. In tennis the balls which are sup-piled could hardly be called even mediocre, and the courts are in terrible condition. The lack of "Mother Nature" to supply rain paved the way for a terrifie mutilation of the courts provided row far a terrifie to say nothing of some twenty others scattered along the terrace.

mitination of the courts product others scattered along the terrace. The upkeop of these courts is a problem for the Uni-tic is hown that the University is struggillar along in a financial rat, and that the athletic gate receipts have failen off this year. Even with these facts there seems to be no reason why the varsity courts which receive attention every day could not be neglected for one morn-ing every week, and the labor ordinarily at work on them be devoted to the courts which the rest of the University players use. This improvement would neces-sarily be slow. Once the work is started it is up to the students to preserve the courts in order to speed up the results. After all, one day's work on the course will amount to little if care is not practiced in their use. Tennis is a sport in which almost any person can compete. Of course every mann is not as skilled as his neighbor, but he can derive a great deal on phe-heric and place the courts in a start bar the hast fairly place in the first the almost any person can compete. Of course every mann is not as skilled as his neighbor, but he can derive a great deal on phe-tering and the start of the start of the start has the place of the start and the start of the start has the start of the start and the start of the start has the start of the start and the start of the start has the start of the start and the start of the start of the start has the start of the start and the start of the start.

Well the man with the yiolin has made his appearance in Raleigh and has made off with lots of the state's proney. Law it is funny that the very people that urged the stay at, home program are clamoring for just such things as that—things that will, if they go on long enough, finally take all the not an editorial so let's go on with the dance. According to my way of thinking, the dance was the lowest priced dance and it was the best band that has made its appearance in the fair city. Rubin-off himself proved to be a very jorial fellow and with his limited command of the English language he made a brave attempt to be humorois and suc cested to a surprising extent. Now this week-end the main attrac-fiered waiting will preside, and very adding will preside, and very adding built and that the these of the most entertaining beands in the country and I don't think that those base atteme two dollars and half to appointed. Well the man with the

country and I don't think that these that have two dollars and half to spend in that manner will be disary pointed. Here is a new wrinkie that some of you prospective insurance salesman, of the future might consider: An entirely new form of insurance An entirely new form of insurance College. St. Paul. The students may your anid. A fair freshman coed at take out a policy against being called the professor calls on them they are able to collect five dollars. I am glad to be able 40 say that we have at least two men at State College

able to collect five dollars. I am glad to be able do say that we have at least two men at State College that can throw something besides the proverbial "bull," even if we have non facts to prove that we have more. I am referring to two of our weight men on the track team, one is a tresh-man and the other is a sophomore. Zori, the freshman, that was referred to, is the boy that did everything with the discus but throw it away, and broke all the state records. Rea heaved the shot for enough to outdistance his nearest rival by more than two feet. This is his second victory along these lines and it is hoped that both boys as they are here.

What is a co-ed? The Critograph of Lynchburg College defines a co-ed as a freshman's dream, a despair for a sophomore, an agony for a junior, and a future financial liability for a
