Name Change Protest Growing.

Picket Line To Continue; May Move To Capitol

By Cora Kemp

Gusty winds and drizzling rain failed to dampen the spirit of students picketing the Chancellor's home yesterday.

The picketing is scheduled to continue tomorrow at the same place or at the Capitol.

Offended by the Chancellor's recent endorsement of a proposal to change the name of this institution from North

Carolina State College to the University of North Carolina at Raleigh, the students formed the picket line around noon to oppose the name-change. They carried posters expressing their disapproval.

The students, picketing seven at a time, staged the protest primarily to attract attention to the name-change proposal, according to one of the picketers. He added that the picket line was "nothing personal against the Chancellor."

Passers-by on Hillsboro Street frequently yelled encouragement to the group. Photographers, newspaper reporters, and TV and radio newsmen were on the scene constantly. Eating establishments across the street kept the students supplied with coffee and cookies. There was no apparent opposition.

Most of the picketers were members of the FarmHouse and Theta Chi fraternities, but Preston Cornelius, FH president, stated that "the action yesterday was representative of the student body and any student interested is welcome to join in for future action—possibly picketing the governor's mansion."

State Student Legislature Meets Today

The State Student Legislature began its annual session today.

The Legislature is composed of delegations from North Carolina colleges, and passes legislation on both state and national issues.

Jack Jordan is the leader of the State delegation to the Legislature.

The State College bill to the Legislature calls for visits for married honor prisoners to their homes.

Other bills to be considered call for constitutional amendments to make it possible for N. C. governors to succeed themselves, a repeal of the food tax and a placing of taxes on tobacco, civil rights legislation, and other bills covering state and national affairs.

SG Looking For Six Prospective New Legislators

Six senatorial seats in the Student Government Legislature are presently unfilled, according to SG Secretary John Carr.

Carr explained yesterday that the vacancies are due chiefly to the fact that some offices were not sought by anyone in the general campus elections, and others are vacant because a few senators have left school.

Legislative chairs presently unfilled are Design (professional), Education (sophomore), Forestry (senior), Forestry (sophomore), General Studies (junior), and General Studies (senior).

Carr invited qualified students to contact SG President Floyd McCall to set up an interview. McCall may recommend students to fill these seats to the Legislature, which will elect them.

Interested students may contact McCall at TE 2-9148 or TE 2-8738.

Sanford Here Mon.

Governor Sanford will appear at WKNC radio station Monday morning at 9 o'clock for an interview, according to Charles Moseley, announcer for the program.

The Governor will answer questions raised by students at State and Peace Colleges concerning the name-change for State, plans for financing the proposed expansion of the Consolidated University, and local politics.

The interview will be re-broadcast Monday night at an unannounced time.

College Scours State For New Engineers

By Doug Lientz

What is being done at State College about the decline in the number of engineering students in this country?

According to a recently released report of the United States Office of Education, total engineering enrollment dropped about two percent from 1960 to 1961, and is down about five percent more this year. The

figures for this year are not complete yet.

According to Dr. R. G. Carson, director of instruction for the School of Engineering, the State College Engineering Advisory Council is sponsoring a program to promote the organization of engineering clubs in high schools throughout the State. It is carrying out this program with the cooperation

(See STUDENTS, page 2)

This State student is one of several who spent yesterday afternoon pounding the pavement in front of the Chancellor's house in protest of the UNCR proposal. (Photo by Jackson)

Change 'Step Backward' Says Alumni President

By Allen Lennon

State College Alumni Association President Charles H. Reynolds has added his name to the movement protesting the proposed renaming of State College as the University of North Carolina at Raleigh.

Reynolds voiced his opposition to the renaming section of Consolidated University President William C. Friday's proposal to improve higher education in the state. Reynolds stated his position in a letter to Governor Sanford dated November 27.

The alumni president again voiced his preference for the name North Carolina State University or even the college's present name rather than the proposed University of North Carolina at Raleigh name.

Reynolds emphasized his enthusiastic support of the overall objectives of the plan as expressed by President Friday, and stated that his only objection to the measure is the renaming of State College.

The letter cites the name UNCR as "a step backward for higher education in North Carolina and a needless blow to the prestige of State College for years to come."

The Reynolds letter calls the name N. C. State "a real and valuable asset just like a corporate name is an asset" and goes on to point out that "no prudent businessman would

think of changing the name or identity of a highly regarded nationally and internationally known product or concern."

Reynolds further points out that "the real objectives mentioned by President Friday can be attained with the name North Carolina State University. This is the logical name and no one can PROPERLY object to it."

"We urge you (the Governor), President Friday, Committee Chairman Pearsall, and the University Trustees to give this matter further study, and we hope the final recommendation will be such that the more than 35,000 North Carolina State Alumni will be able to join you in support of the entire program."

State Cagers Testify

By Mike Lea

A former State basketball player said he "didn't do nothing" to shave points in a ballgame, but still received \$1,250.

Anton (Dutch) Muehlbauer, testifying yesterday in Raleigh Superior Court in the basketball scandal trials, said that he, Stan Niewierowski, and Terry Litchfield knew of each other's activities and that he had worked with both Niewierowski and Litchfield in shaving points.

According to testimony by both Muehlbauer and Litchfield, they both became implicated in point shaving at the same time, but Litchfield was the first to come into contact with bribers.

Litchfield testified that he first talked to Lou Barshak, who has pleaded guilty to charges of bribery, about point-shaving, and that he later told Muehlbauer about it. According to Muehlbauer's and Litchfield's

Alumni Protest Change At Kinston Meeting

By Grant Blair

State College Alumni, favor NCSU, Chapel Hill alumni favor UNCR, and Woman's College alumni don't want men.

In a special meeting of approximately fifty alumni and friends of the Consolidated University last night, in Kinston Courthouse, *The Technician* interviewed alumni from the three colleges.

Chancellor Caldwell explained the proposed educational system which has been proposed by the Carlyle Commission and endorsed by Consolidated University President William C. Friday and Governor Sanford. Questions were then solicited from the floor.

The proposed name change was questioned until very late in the meeting.

Chancellor Caldwell admitted that there was some controversy concerning the name change at State College. "At the present time students are picketing my home," he admitted. One question pointed out that a more complete and clear coverage by the press would lead to a clarification of the name problem, as well as the other problems concerning the proposal.

In special interviews after the meeting, comments were elicited from the alumni.

"I was always satisfied with the name when I went there, but if we're intending to change, then there is no name more fitting than North Carolina State University." — Harold Lloyd, State alumnus.

"It is a simplification and it gives you a little more prestige." — University of North Carolina alumnus.

"I don't object to Woman's College's name being changed. I graduated when it was the North Carolina College For Women." — Woman's College alumnus.

"I prefer North Carolina State University"—Class of '36 alumnus with a son at State.

The majority of State's alumni summed up their position in this statement. "We're all in favor of retaining North Carolina State in our name. The University or College portion of the title is unimportant."

Textile Director From Hungary Speaks Here

The School of Textiles is hosting a visitor from behind the iron curtain.

Dr. Victor Dischka, director of the Mechanical Department of the Textile Research Institute in Budapest, Hungary, is spending this week as a guest lecturer at the School of Textiles, according to Malcolm E. Cambell, dean of the school.

Cambell stated that Dischka would discuss the work of the Institute and some results of its research in a series of faculty-student seminars which will extend through the remainder of the week. Dr. Dischka will also describe some of the textile research which is presently being conducted in the other Satellite countries of Europe, according to Cambell.

The dean described Dischka as "a world-wide lecturer, and a very fine man."

Execs To Meet

A meeting of the Student Government Executive Council has been called by SG President McCall for 12 noon, Monday, December 3. The meeting will be held in Room A of Learzar Hall. Attendance is required of all council members.

New Mechanics Lab Equipment Planned

Equipment for a new laboratory facility is now being designed and built by the Engineering Mechanics Department.

According to Dr. P. H. McDonald, head of the Engineering Mechanics Department, the new equipment, which will be used for graduate research and undergraduate instruction, will be housed in room 23 Riddick.

A machine for producing a flow in compressible fluids will be used in the study of boundary layer theory, turbulence in

fluids, and viscosity effects. Also, a six-degree-of-freedom facility for applying loads is under construction.

Included in the project is the preparation of an optic bench for use in stress optic and strain optic analysis of model materials.

At present, according to Dr. McDonald, \$20,000 of State funds is being used for the project. He added that he hoped to obtain additional funds from the National Science Foundation.

More Than Cheers In A Name

The Greensboro Daily News

Looking with approval on President William C. Friday's new blueprint for the Consolidated University of North Carolina, the Shelby Daily Star bestows its editorial blessing on the proposal to upgrade the three university units and make them truly equal in U. N. C. at Chapel Hill, U. N. C. at Raleigh and U. N. C. at Greensboro.

Educational progress, as such, is hailed. But the Star does conjecture that the renaming may make things tough on cheerleaders:

"We believe President Friday's suggestions will find much support among those interested in higher education.

Now, if he can suggest some way to avoid having football fans on opposite sides of the field having to yell:

Rah, rah U. N. C. at Chapel Hill, and the echo.

Rah, rah, U. N. C. at Raleigh."

Don't leave off "Rah, rah, U. N. C. at Greensboro," Shelby Star. It may take time to put out athletic teams at the Greensboro unit. But admission of male students will be the beginning. Think what a mixed team would do in bringing out football candidates, appealing to other college and university schedule makers and even to potential crowds of onlookers. The revamped U. N. C. at Greensboro might be playing Vassar sooner than you think.

The cheerleaders will somehow find a way. There was no end of cheering back during the period when what is to be U. N. C. at Raleigh was officially labeled North Carolina College of Agriculture and Engineering at Raleigh.

If this cheerleader stuff is a major matter, let's just refer it to a board of lower education to work out.

Cutting The Failure Rate

We have commented many times in the last few years about the scheduling of final exams, but this time we will praise instead of "knock" it.

In the past, finals have been scheduled so that almost everyone had two or three exams the first days of the exam period, and had none towards the end. This semester, the schedule is arranged so that the majority of the students will have only one a day.

Anyone looking at final grades this semester may find that this may be a more effective way to cut the failure rate at the school than the many other methods which have been tried . . . and failed.

Watch Your Step

Students may not receive *The Technician* at their dormitory room doors much longer. There have been repeated instances of papers being torn up in the halls, and the Student Housing Office has said that if this continues, door-to-door delivery will be stopped.

We would like to ask everyone to be careful not to step on or kick papers which are in dormitory halls. We would rather have them delivered door-to-door, and we hope that dormitory students feel the same way.

Apollo Scientist Slated To Speak

The man trying to hit the moon will speak in the Riddick auditorium on Thursday, December 6, at 4:00 p.m.

Dr. G. C. Clementson, technical director of Apollo-Space Sciences for North American Aviation's Space and Information Systems Division, will speak on the Apollo space project under development by North American Aviation. The Apollo three-man space ship will cost North American Aviation three billion dollars over the next five to eight years for its share of the program.

In 1961 Dr. Clementson joined the Space and Information Systems Division following a distinguished engineering and academic career in the U. S. Air Force. From 1955 to 1961, he was head of the Department of

Aeronautics at the Air Force Academy, responsible for all phases of cadet instruction in the fields of thermodynamics and aerodynamics.

Earlier, he was assistant professor of Electrical Engineering, responsible for developing and supervising a program of study in automatic control theory, at the USAF Institute of Technology, after serving for three years as chief of the Fighter Systems Branch, Armament Laboratory, Wright-Patterson AFB, Ohio. Dr. Clementson received his B.S. degree from West Point, M.S. degrees from MIT and the California Institute of Technology, and his Sc.D. from MIT.

All students and interested persons may attend, according to officials of the School of Engineering.

Handbook for Coeds Now Being Planned For Next Year

The Women's Campus Code Board plans to compile a handbook for coeds by next fall.

According to Kaye Perryman, newly elected chairman of the Board, the handbook will contain information concerning housing, conduct, and extra-curricular activities and will be distributed to all coeds.

Miss Perryman also announced that Joan Corter, a junior, and Peggy Hollingsworth, a sophomore, have been appointed to the WCCB to represent their classes. Miss Corter filled a vacancy left by Jill Robinson, who transferred to another college. Miss Hollingsworth replaced Ethel Oliver, who withdrew from the Board.

For Officer Training

A F Seeks Recruits

Persons interested in signing up for a three months officer Training School are invited to contact Air Force representatives at an information booth in the College Union between 10 a.m. and 6 p.m. December 5, according to Lt. Col. Franklin

Students Sought

(Continued from page 1) of the North Carolina Engineering Council and other engineering organizations throughout North Carolina.

Work on the program was started last spring, when it was taken before the Engineering Council. Before this time, however, other engineering organizations had organized a number of junior engineering clubs.

In the program, clubs are organized in high schools under the sponsorship of a high school teacher with the help of local engineering and technical societies and a liaison engineer. The program is getting under way at the present time.

D. Blanton, assistant professor of Air Science.

Col. James D. Howder, professor of Air Science, added that this step-up in demand for trained Air Force officers is a result of retirements of World War II officers and the loss of reserves from the termination of obligations of draftees called up during the Berlin and Cuban crises.

Officer Training School will begin in April and May 1963. Students holding a college degree by this time may apply and serve their military obligation in this program, according to Blanton. After training for three months at Lackland Air Force Base in Texas, the graduates of this school will receive a commission of 2d Lt. in the Air Force Reserve. Those so commissioned will be called immediately into active duty with a four year obligation. After eighteen months of service, a promotion of 1st Lt. can be expected, according to Blanton.

Radiation Treated Fibers Have Many Advantages

By Grant Blair

Microbes don't like cotton which has been chemically changed through radiation.

The discovery of a mildew-resistant cotton is one of the results of a research project being conducted by the School of Textiles into the alternation of textile fibers by radiation, according to H. B. Rutherford, director of the project.

The purpose of the project, according to Rutherford, is "the chemical modification of fibers using radiation to initiate reactions which cannot be done chemically." Said Rutherford, "We have found that we can modify fibers and get some new properties that they didn't have."

The heart of the project is a

Cobalt-60 source in the basement of Nelson. The source contains 4,000 curies of Cobalt-60; that is, it gives off the same amount of radiation as 4,000 grams of pure radium shielded by 8,000 pounds of lead. It is the largest source on campus.

The School of Textiles operates the project as a joint project with the AEC and four textile mills: Burlington Mills, Cone Mills, Reeves Brothers, and J. P. Stephens.

The research is directed by H. B. Rutherford, head of department of Textile Chemistry, and A. A. Armstrong, associate professor of Textiles. Both Rutherford and Armstrong will present papers at an international symposium on radiation to be held in Columbus, Ohio, November 29-30.

Author Of Five Books Visits Writers Workshop

By Doug Lientz

John Ehle, author of three novels, answered the questions of the participants in the College Union Writers Workshop at its meeting Tuesday night.

Among the first questions he was asked was "Do you use an outline when you write a book?" To this he replied that he had worked both with and without an outline. He said that though it was easier to write with an outline to follow, it was seldom possible to stick to an outline throughout a book.

The discussion then turned to the book which Ehle is now working on. Guy Owen, associate professor of English, asked how he had started work on the book, suggesting several possibilities and ending with "abstract reasoning." Owen then said, "I meant that last one facetiously."

Ehle then said, "Well, that's how I did it."

Ehle then said that although the book is scheduled to be published shortly, he didn't

know how it was going to end. He added that ending it would be no real problem—he could always kill somebody. But he added that he did not know who among his twenty main characters he was going to kill. He said that he wanted it to have a meaning for those who took the trouble to read it.

To date Ehle has had five books published, including three novels. His most recent book is *Lion on the Hearth*.

Annual Alumni Contest To Be Here Saturday

Wolfpack basketball is officially underway.

In final preparation for the December 3 contest with Clemson, the Wolfpack will meet returning State cagers on Saturday night for the annual Alumni game.

State will be basically inexperienced this year, except in the backcourt where all-ACC Jon Speaks and Ken Rohloff, both 1961-62 starters, will return. The front line will be tall and should offer good rebounding, while center will be manned by 6-8 John Key and 6-9 Ron Gossell. Key and Gossell saw little action last year as reserves.

Returning forwards are Pete Auksel and Jim Whitfield. In 1961-62, as a starter, Auksel averaged 8.2 while alternate starter Whitfield averaged 5.2.

Learning never stops for engineers at Western Electric

There's no place at Western Electric for engineers who feel that college diplomas signify the end of their education. However, if a man can meet our quality standards and feels that he is really just beginning to learn... and if he is ready to launch his career where learning is an important part of the job and where graduate-level training on and off the job is encouraged — we want and need him.

At Western Electric, in addition to the normal learning-while-doing, engineers are encouraged to move ahead in their fields by several types of educational programs. Western maintains its own full-time graduate engineering training program, seven formal management courses, and a tuition refund plan for out-of-hours college study.

This learning atmosphere is just one reason why a career at Western Electric is so stimulating. Of equal importance, however, is the nature of the work we do. Our new engineers are taking part in projects that implement the whole art of modern telephony, from high-speed sound transmission and solar cells to electronic telephone offices and computer-controlled production techniques.

Should you join us now, you will be coming

to Western Electric at one of the best times in the company's history. In the management area alone, several thousand supervisory jobs are expected to open up to W.E. people within the next 10 years. And our work of building communications equipment and systems becomes increasingly challenging and important as the communications needs of our nation and the world continue to increase.

Challenging opportunities exist now at Western Electric for electrical, mechanical, industrial, and chemical engineers, as well as physical science, liberal arts, and business majors. All qualified applicants will receive careful consideration for employment without regard to race, creed, color or national origin. For more information about Western Electric, write College Relations, Western Electric Company, Room 6204, 222 Broadway, New York 38, New York. And be sure to arrange for a Western Electric interview when our college representatives visit your campus.

MANUFACTURING AND SUPPLY UNIT OF THE BELL SYSTEM

Aerospace Program Adds Rocket Courses

Three rocket propulsion courses for the Mechanical Engineering Department have received final approval, according to Dr. R. G. Carson, director of instruction for the School of Engineering.

These courses are ME 681, Introduction to Rocket Propulsion; ME 682, Solid Propellant Rockets; and ME 683, Liquid Propellant Rockets.

The Mechanical Engineering Department is adding these courses, as well as others, as a part of its putting space technology into its old aeronautical engineering program.

Marching Cadets Doing Lots

The Marching Cadets have been doing a lot of marching in the past few weeks.

They recently marched in the Cary Band Day Parade, the Homecoming Parade, and the Christmas Parade, and they put on an exhibition in the UN Day festivities.

The Marching Cadets, an Air Force drill team, is composed of sixteen men and one officer. Last year they placed first in the Cherry Blossom Festival and first in the state.

Faculty Senate Approves Change

The Faculty Senate has unanimously pledged its support to the proposed changes in higher education in the state.

In a recent meeting, the faculty passed a resolution expressing "its appreciation for the imaginative and energetic leadership demonstrated by President William C. Friday and Chancellor John T. Caldwell in developing and proposing these very constructive measures in the area of higher education and that the Senate pledge its support to them in their effort to realize these most significant objectives."

The changes include the setting up of community colleges, a standard name for the branches of the university, and a statutory definition of the functions of the branches of the university.

Cagers Testify In Court

(Continued from page 1)
Washington at the start of the 1960-61 basketball season. They also received \$1,000 apiece for point-shaving in a December, 1960, game against Georgia Tech which was played in Raleigh, according to their testimony. They had to return this money after the Georgia Tech game did not stay within the point-spread.

Coach Everett Case, who also testified yesterday, said that "this was the first game in which I had sensed anything wrong."

Niewierowski, who also testified yesterday, said that his dealings in point-shaving were made with Aaron Wagman and Joseph Greene. According to his testimony, he first met Greene and Wagman through Don Gal-

agher, another former State basketball player who has already testified to shave points in ball-games.

According to Niewierowski, Muehlbauer did not know that Greene and Wagman were involved and all the arrangements were made by himself.

Niewierowski said that he received \$1,250 dollars for shaving points in a game against Maryland and that he and Muehlbauer received money in a sports car book which was mailed them for their participation in a game against Duke.

The ex-players, and Coach Case were testifying in the trial of Dave Goldberg and Steve Le-kometros of who are both from St. Louis and are being tried for bribery.
