Rigney gives Holtz statement of support

by Bernard Barnett
Assistant Editor

Acting Chancellor Charles Rigney issued a statement Friday afternoon praising football coach Lou Holtz and saying that he upheld responsibility and did not exceed his authority although he was cited.

"Some people are attempting to discredit Lou Holtz at this time and justify actions in attempting to block previous promises to the University football team," Rigney said in the statement. "I have investigated the matter thoroughly and would like everyone to know that Coach Holtz was attempting to fulfill promises to the team, as he has done for years, in an area that has not received the proper support.

"Coach Holtz has had to defend this year, as in past seasons, as the welfare of his volunteers to have the practices when requested. This year, as before, he requested all spectators to leave the area, and all except one for a single person, who insisted on remaining in theSpecific incident, involving "Tigers of the South," a student organization, was discussed in detail by Rigney, who pointed out that the issue in play is a single event and should not be generalized as a whole team... as a whole team," he continued. "I feel like we're the only ones making more improvements every week. We didn't have the ideal conditions.

"While it was a total loss effort by the Pack, Brown was the most obvious figure in the Memorial Stadium history..."

Brown - Freshman sets record, demolishes Clemson

by James Carroll
Sports Editor

CLEMSON, S.C. - State freshman running back Ted Brown continued his brilliant season Friday by rushing 43 yard and scoring the winning touchdown in a 14-7 victory over Wake Forest.

"This is my third year on the team, and it's the best season I've had," said Brown, who was the key player in the game as usual. "I hope we can keep this record going."

"The record is good, but it isn't everything," said Brown, waving his sweet record. "The main thing is to win. If we win, the records will come. But it's a little a good deal.

"UNQUESTIONABLY it was the best game of the season," Brown added. "This was a good record. That's all I can say. I just try to keep my legs, keep my feet and enjoy our game. Victory is a case of the rain coming off the ground."

Brown's season output reads 121 yards against Indiana, 5.5 against Notre Dame and 25 against the State, which were the three highest totals in the ACC. He is the only student with one 100-yard game, a total of 52 yards. Brown has gained over 100 yards on the season and has taken over the lead in the All-American voting."

"Ted was the key player in the game as usual. "I hope we can keep this record going."

PARTNERS works with young people

by Bill Stewart
Staff Writer

PARTNERS, a faith-based Christian Social Ministries Program, is a volunteer youth and family service program in which concerned citizens are paired with young people in need of guidance and support.

According to President P. Jones, "PARTNERS' approach to the organization needs help from the University community. Youth are in the State University: especially our partners," Jones said.

"Every PARTNER is a volunteer spending two to five hours a week with a young person. The volunteer gets a contract for the program, and informed of the problem. The volunteer then signs up against. Also explained are how the juvenile system operates, and your legal status and limitations as a volunteer."

FOLLOWING these sections, the volunteer is matched with a young person. Monthly training sessions occur, in which the volunteer is trained in the juvenile system, and how to deal with the youth. The volunteer is then matched with a youth.

The young person is not necessarily a juvenile, but it is the youth that is selected for the youth program. The youth is selected in this manner because the program does not have the ability to determine if he or her has been personally characterized as being able to deal with the program. Or does the youth have a willingness to work with the volunteer, and that the family understood the commitment of this involvement."

Activities undertaken by Junior and Senior Partners are up to them. "You can play ball, attend sports events or play, fish, have dinner, attend a concert, go to movies, go for a walk," Jones said. He went on to emphasize the importance of the triangulation aspect of the partnership. "That is more important than the fact that you go to a concert, understand and give out love. The activities in which you are involved should be something you and your partner enjoy, and that facilitates the establishment of your relationship with the child." Why is there a need for PARTNERS? Jones noted that "in order to make sure that the Youth and Family Services program runs smoothly" and to maintain the involvement of individual members of the community programs such as PARTNERS. Jones explained.

News in Brief

State gets grant

The U.S. Energy Research and Development Administration has awarded a grant on Carolinas State University to continue earlier research that could aid in developing fusion energy.

Dr. L. Worth Swegle and four other state physicists are collaborating with colleagues at Duke University and the University of North Carolina at Chapel Hill on a series of projects at the Triangle Universities Nuclear Laboratory.

That laboratory, located at the Duke campus, was established in 1966 under a $1 million Atomic Energy Commission grant.

The major equipment used in the laboratory is a 15 million volt Teledyne Tracor GIF accelerator with a 1 million volt synchrotron. The equipment was donated by General Atomic and is considered the most capable and one of the last remaining of its type in the United States.

Responsible for the sophisticated equipment as 'a very fancy shotgun that fires nuclear buckshot,' physicists and other scientists are making neutron measurements which would be applicable to fusion reactors. Fission reactors now in use aim the spent to produce energy, but most physicists believe scientific feasibility for fusion reactors will be established within a decade and that commercial fusion reactors will remain in operation sometime after the start of the next century.

Other State physicists conducting research under the program are Dr. A.W. Walker, Dr. Donald Tilley, Dr. Gary R. Mitchell and Dr. Christopher Green.

State helps triangle

"For the Research Triangle Park, the universities are sources of ideas, of young trained researchers, and of brains with which to find the solutions to the problems facing our society today," said Dr. H. M. Morgan, president of the Research Triangle Institute, during ceremonies marking the 15th anniversary of the park.

"For the Research Triangle Park," Morgan said, "it is necessary to have a large enough research group to make energy. He and his colleagues believe scientific feasibility for fusion reactors will be established within a decade and that commercial fusion reactors will remain in operation sometime after the start of the next century.

Other State physicists conducting research under the program are Dr. A.W. Walker, Dr. Donald Tilley, Dr. Gary R. Mitchell and Dr. Christopher Green.

Technician

The Technician has a position available for a typesetter. Hours are 12:30 p.m. - 3:30 p.m., Tuesday, Thursday and Sunday.

If you are an experienced typesetter, or just a good typist, we need you.

If you're interested, come by the Technician office today or Tuesday between 2 and 5 and see Teresa Brown or Kevin Fisher.

A Beginners' Guide To The World Of The Grape

by R. Cookie Hawkins
ELJ Galli Winery

The wine snob described
as You Can't Be a Wine Taster Benjamin Franklin said, "Wine is constant proof that God loves us and wants us to be happy." Unfortunately, not everyone is happy with wine unless they have a personal appreciation for the ethereal qualities of angels that can be experienced on the head of a pin. To be sure, the glory of the grape is many and various. The last thing we need, however, is another self-proclaimed pontificating about a glass and talking about the Good-Lomew equation while claiming to perceive Gregorian chants and the Rites of Dionysus.

Just as no one need not be a botanist to appreciate a rose or a meteorologist to dream in a rain, no one need be a connoisseur to enjoy a glass of wine.

It may be that wine snobs exist because table wine, the kind of wine that increases the pleasure of food (and hence more important category from an aesthetic standpoint), is relatively new in America. For a long time the pleasures of table wine have been taken for granted by Americans for reasons of heritage and by the upper class. But until relatively recently only a minority of wines shipped were table wines. Only in 1969 did table wines make up the majority of shipments. Since then, the category has expanded to the point that it is absolutely and relative to other types.

Some wine snobs, by-products of the new popularity of fine wine are the ones who, today, try to dictate, as Henri Matisse was said to do, with special glasses to consider, wines which should or should not be mentioned in conversation and are considered proper to examine. And the wine themselves had to be from places with strange and confusing names.

We have discouraged that enjoyment of table wine is not complicated. In the marketplace, if a wine is priced right, looks good, smells good, and tastes good, that is sufficient cause to buy it.

What wine drinkers haven't realized is that straightforward standards of what looks, smells, and tastes good apply to wine. There is no comprehension of tasting squares or tasting triangles; no Grand Schumann five times fast. When the fundamentals are known, with a little practice you will discover that wines distinguished by the nose may stand alone very comfortably beside those famous European names. More importantly, you will find and enjoy the most remarkable, flexible, and fascinating ones of the new wines.

Through The Drinking Glass

What To See When Looking at Wine

The great Chinese chefs say that good food appeals to all five senses. It should be attractive to look at and a pleasure to smell. It should be a mouthful, produce a proper mood when married with the palate of the diner. Except, I must admit, for the sound of the wine, good wine possesses the same characteristics.

The technique of tasting is de- signed to permit evaluation of all the salient qualities of the wine. Professional tasters vary a great deal in the details of their tasting methods. I think the following represents the best starting point for developing your own technique of tasting.

One way we go about tasting should be in a clear, stemmed glass of no less than an apparent 2 ounce capacity. (Cigar, as you can evaluate the color of the wine, element, and your mood and don't insist.) The glass should be shallow so that the diameter of the glass is smaller than the diameter of the bowl. The smaller the bowl, the less than one-third one-half full. Only part full to permit volatiles components of the wine to accumulate in the upper portion of the glass so you can smell them, nearing toward the top to prevent the volatile substances from dissipating into the air. Any glass can be used for any wine as all occasion.

First, shine a light on a light source through the wine. Then look down through the wine at a white surface such as a black piece of paper or a blanket that is well illuminated, tilting the glass until the wine almost runs out of it. Looking through the wine will reveal any cloudiness or suspended matter; tilting the glass in its stand shows that, to some extent, permits you to evaluate the wine more accurately. You'll now see the clarity and pleasing color. Color variations, particularly among red wines, are considerable. If you take care to notice them, you will find that different wines are more or less pleasing to look at. For example, I find a bright magenta color especially rewarding, and am pleased by, a vivid garnet with hints of plum color at the edge far more satisfying, with equal justification, a fading to a pale palest straw, a sort of delicate color which is peculiarly attractive to me. Some people also note how the wine changes with time, as the glass is filled. Paper will be the third speaker, the curtain of dark smoke spreaded by the Department of English at Tufts. He has published fine criticism, has been a poetry editor, written an autobiography, studied with Martin Groden at Bennington, and has just published a volume of his poetry under the title of "The Agreement." He has produced book-length of Haber, Melville, Funtel, Gile, Snedecor, Gare, and a number of general surveys of contemporary French literature.

The task is scheduled for 8 p.m., Thursday, October 26, in the Harrington Room of the D.H. Hill Library.

Engineers & Computer Specialists

Your degree can get you ahead faster with us than with anybody else.

Here's why:

1. You are needed right now. Or soon as you get your degree. Our project teams are crying for good young professionals who can grab hold fast.

2. You'll get a chance to prove how good you are. Every day you're evaluated regularly. We are out missing persons at TI. If you're good, we'll notice you fast. No matter how long the people above you have been there.

3. You'll be involved in state-of-the-art projects. Advanced airport and airborne radar. New infrared and laser electronics applications. TI is the technological leader in literally scores of product fields. This leadership has produced more than 3,500 patents.

4. You'll work on a complete system. No theory stuck in a lab, no theory locked into a repetition. Not even a small project team. You'll interface daily with other disciplines and other phases of your job.

5. You'll work in a job-stable, multi-market situation. We have a variety of products and markets. We're not heavily dependent on any one of them -- and neither is your job.

Live in Dallas. You'll like working and living in the Southwest's largest, liveliest metropolitan area. Dallas has got something for everybody: pro football, two civic opera companies, a cost of living well below the national urban average; and within 100 miles, 31 big lakes and excellent hunting for deer, turkey, quail, and doves.

We're the Equipment Group of Texas Instruments We've got jobs right now in manufacturing and design for: BS, MS, PhD in Electrical Engineering BS, MS in Mechanical Engineering BS in Industrial Engineering or Manufacturing Technology BS, MS in Computer Science

The Equipment Group will be interviewing on campus November 14 & 11.

For more information, write: Charline Laughin, Texas Instruments, P.O. Box 8015, M/S 222, Dallas, Texas 75222.

Brown has talented group of supporters

by David Carroll
Staff Writer

Clemson, S.C. - Although elusive freshman running back Ted Brown stole the show in last Saturday's record-breaking 47-3 victory over the heralded Georgia Tech Yellow Jackets, the Tigers could have just as easily been participating in the Sugar Bowl without the fleet-footed tailback's contribution.

There was a powerful, oratorical line that simply blew out the Georgia Tech defense, making the Tiger offense look like an elephant. The Tigers just didn't have the footwork to go with the offense.

"Their biggest problem was our offense," said Georgia Tech head coach Bill Hudgins. "They ran the same type of offense that we do. They were good. We've run the same offense for so long that we know how to stop it. It was a matter of everybody doing their job."

The ACC football season, which begins with a game between Wake Forest and Temple on Saturday, Sept. 7, should feature some exciting football.

Line, defense, etc.

Brown has been the talk of the ACC this week, and there's good reason for it. He's a fast runner with good vision who can make big plays and score touchdowns.

"I'm really looking forward to seeing what he can do," said Clemson head coach Frank Howard. "He's a great player and he's going to do some good things for us."
Lee I shocks Carroll II for women's title

When Sandy Maddox of Carroll II throws a pass.

It was a rough day for Clemmenson quarterback Saturday. Freshman starter Willie Jordan (left) uses protection from guard Jettun (70) who blocks Tom Prongey. Freshman Steve Fuller (above) takes handoff as State's Jen Stowe closes in.

Lee's Mackenzie Wilcox williams Whitehead with a three-yard touchdown pass in the first quarter when she ran out and Ben Boxley deep route. After that, State piled up yardage, scoring 13-3 in the second quarter. The extra point was missed, and the Bulldogs would make up the two-point deficit by the end of the third quarter, 16-11, before being stopped on the 28-yard line in the fourth quarter.

Sports in brief...

ICE HOCKEY: The University of North Carolina at Chapel Hill is still winning, according to the Bulldogs. On Tuesday, Oct. 20 from 1:00 p.m. at Providence Sports Arena, the UNC-Wilmington Bulldogs will be held to a 3-0 defeat by the University of North Carolina at Chapel Hill by a score of 2-2. The Bulldogs will look to bounce back against the University of North Carolina at Chapel Hill on Wednesday, Oct. 21 from 5:00 p.m. at Providence Sports Arena.

SPAGHETTI SPECIAL

**God's laws**

Karen Anne Quantick is dead.

The Equal Rights Amendment battle is underway in New York, the first time with First Lady Betty Ford stepping into the firewall. The momentum of support is gearing toward a vote. Even if there are any doubts left among people here—a demand for the right to believe in the God of their own choosing, regardless of their race or nationality. A whole superstructure of laws exists which reflects the Christian ideal that all things are God-given, and one man must not claim the right to tell another man what to believe. The laws are part of the legal code in the country, and there is no longer one God. There is a mixture of Christian, Buddhist, Hindu, and other philosophies and beliefs, all of which deserve equal recognition as the major by Christianity.

**ERA—again**

The one argument that every comes close to making sense in service to the armed forces. Women, we are told, are just too weak to be a part of a war, that doesn't bother us. Women in other countries have been fighting themselves, or victimized and vigilant soldiers, aids to stronger arguments. And the idea that the war could be won, if only it was from its roots. And the ideal that we were not fighting for.

Wouldn't it disrupt our system? Would it be impossible to hold our hands? Perhaps we would need to disrupt the whole law to prove that this is not the way to hold people in its present form. It is a way to make a law.

**In case you missed it...**

When you pull the tab off your alumi-num can, it's not immediately observable. We don't immediately drop it into the can, or else). The newspaper reports in the 7th and 3rd issue of the Journal of the American Medical Association.

The procedure of the can is not easily visible to the naked eye: the lining is a mixture of aluminum, which shows up faintly on a x-ray; the lining is a mixture of aluminum, which shows up faintly on a x-ray.

The can is made of metal, the inside lining is a mixture of aluminum, which shows up faintly on a x-ray, but the lining is not easily visible to the naked eye: the lining is a mixture of aluminum, which shows up faintly on a x-ray.

To make matters worse, the rings take into full use of beer or soda are subject to environmentalists as a means of reducing litter and preventing wildlife.

**SUNDAY’S AUTOCROSS SUGGESTS AT LEAST ONE WAY TO USE THOSE TINY, FAST-CORNERING CARS FOR SOMEBODY’S BENEFIT?**

**Theft**

To the Editor: Last Wednesday afternoon my ro-cess was stolen from the bike racks under the building at Third and Chestnut Streets by 12 to 20-year-olds, probably someone over 6 ft. tall. The bike is a Magna Gold stock, with a black frame and white tires. If you see it, please call me at 555-1234.

**Tyson shines**

To the Editor: I would like to thank the Lee- son community, the Lee County Chamber of Commerce, and the Lee Daily Eagle for all their support and hard work towards making Lee County a great place to live, work, and raise families. I would also like to thank all the Lee County residents who supported the Tyson egg business, and those who support our business. Thank you all.

**Letters**

Dooley go home

To the Editor:

When I read the article about the firefighter's family in the New York Times, I was surprised to find out that the firefighter had been married for only 10 years. It seems that many people have shorter marriages these days, and I think it's important to celebrate those who have been married for a longer period of time. I just want to take a moment to express my admiration for this couple who have been able to work through their challenges and come out stronger on the other side. I hope that they continue to have a happy and fulfilling life together.

**Nasty letter**

To the Editor:

I am writing to voice my concern about the recent events at our school regarding the new policy on student discipline. I believe that this policy is overly strict and does not take into account the individual circumstances of each student. The policy seems to be unduly harsh on students who may have made a mistake or who may be struggling with personal issues. I urge the administration to reconsider this policy and to work with students to find more appropriate and fair solutions.

**Era**

To the Editor: I appreciate every part of the article you did last Friday on SHARE. The cooperative exchange keeps the field of many disciplines and skills. The reporter asked how I would rate the company as a whole. I'd rate it 10 out of 10. This is the best company I've ever worked at. The people are friendly and the work is stimulating. I enjoy coming to work every day. I feel like I'm making a difference in the world. If you'd like to contact me, I'd be happy to talk about my experience.

**“Shore”**

To the Editor:

I am writing to express my concern about the situation at the local beach. The water quality has been deteriorating over the past few years, and I believe that something needs to be done to address this issue. It is important for our community to have a clean and safe place to swim, and I urge the local officials to take action to improve the situation.

**Technical Opinion**

In a country where there is supposed to be a separation of church and state, it is important to find laws which denounce religion and make it illegal. This was the case in Tennessee in 1925, when a law was passed which made it illegal to teach "religion in any form" to children in public schools. The law was upheld by the Supreme Court in 1925, and it was not until 1964 that the law was finally overturned. Today, the law is still in effect, but it is rarely enforced. The law is a violation of the First Amendment to the Constitution, which guarantees the right to freedom of religion. It is important that we continue to work towards a society in which religious freedom is protected and respected.
