NOVEMBER, 1954

To Alumni and Friends of North Carolina State College:

Here on the eve of our 1955 General Assembly, I would like to talk to you for a few minutes about your North Carolina State College--something of its plans and opportunities which our Senators and Representatives will face and meet as they always have.

It has been a great journey, this 65-year history of building a college that would turn high-toned theories into usable practices with which our people might raise their standards of living. You know of these services—of State College's part in conquering Black Shank and Granville Wilt in tobacco; in developing Atlas Wheat, a variety that brings \$20 more an acre to our farmers; in perfecting a light weight clay aggregate and making native clays more profitable; in helping our great textile industry reduce waste, improve quality, increase production; in discovering and extracting tannin from pine bark; in using psychological research to find the causes of industrial, agricultural, and motor vehicle accidents; in bettering testing methods for our furniture, plywood, and lumber industries; in advising our public school system on modern school designs.

These are just a handful. Over 365 projects are in the mill. Over 4,200 young minds are being developed to serve the future. Every county is being reached with demonstrations and results. Every county has two or more students enrolled here this year. There is not time or space for details. You know of them. You know they didn't just happen. They took money and buildings and equipment. They took a great staff, an active student body, and loyal alumni. They took knowledge, ability, and experience. And above all, they took legislators with the foresight and courage to say, "We must move forward."

That has been the byword--or foreword--for the steadily growing services of State College. "We must move forward." We have just begun to serve, just begun to reach all our people. Think on that a minute. In all the history of State College, when has it been in a position to render as much useful service to as many North Carolinians as it is today--never before, because never before has it had the buildings, the equipment, the teachers, or the students it has today. Never before has it stood on such a horizon of state-wide usefulness blended with nation-wide prestige for its work in various technical services to mankind. We are forever indebted to the great legislators, administrators, teachers, students, and alumni of the past who brought us to these heights.

Our debt to them, I believe, can be summed up in one word--responsibility. We are responsible for fulfilling their vision. We are responsible for continuing the momentum they handed us and for retaining a budget worthy of the people and the name called North Carolina.

Our major concern today is to catch up with loose ends or deficiencies in our current budget. During recent years, with a steadily growing student body and plant, we have had to use most of our added financial support to employ the minimum required additional teachers, technicians, clerks, and maintenance personnel. This has taken both institutional revenue and legislative appropriations. The challenge now, a drastic and urgent one, is for more operating funds to meet the opportunities of our day.

And that's what I want to discuss with you briefly, but in enough detail for you to understand the problems and opportunities that face us all. When you have looked them over, discuss them with your Representatives and Senators. They will welcome your opinions, your ideas, and your interest in State College. After all, State College is as much theirs as it is yours and mine, and they work sincerely every two years to make it ever more useful to their people back home.

The traditional mission of State College is to teach, to search, to extend. By nature, our college consists of three major areas:

1--The College, which consists of seven great schools with 48 departments and an Extension Division that carries the College to the people in night classes, short and correspondence courses, and technical institutes.

2--The Agricultural Experiment Station, which conducts notable research on test farms in every climatic and geographical area of the state.

3--The Agricultural Extension Service, which takes the latest teaching methods and research findings to our farmers and homemakers.

THE COLLEGE --

Let's look at the college first. It is going to take \$6,708,865 to operate and improve the college during 1955-56 and \$6,548,665 during 1956-57.

We expect to take in \$2,967,591 during each one of the coming two years, leaving \$3,741,274 to be appropriated by our General Assembly for the 1955-56 year and \$3,581,074 for 1956-57.

The increase we need in state appropriations is \$746,870 for 1955-56 and \$586,670 for 1956-57. Of the first year's increase \$262,200 is for additions and betterments.

The purposes of these increases, I believe, are clear and convincing. Some major operational purposes are:

1--To insure adequate salaries for 48 teaching fellows who provide good instruction at much lower cost. If we are going to meet growing enrollments, we

must develop new teachers. This takes capable, mature graduate students, for whom we are asking salary increases from \$1,200 to \$1,500. Other great colleges are competing for them. They enter here at financial sacrifice, the majority with families.

2--To secure more library books, which now constitute a total budget of less than \$25 per student for new books, far below the national average.

3--To provide administrative and general service positions:

A Dean of the Faculty and a Secretary . . .

. . .To conduct efficient and economical administration of academic affairs, an urgent job to which the chancellor has little time to give. It covers personnel selection, teaching loads, curricula enrollments, teaching and research relations. It will help the degree-granting schools maintain more uniform policies in selecting and promoting staff members and evaluating current programs.

An Assistant Music Director . . .

. . . To assist a department that has had a lone director since it was organized in 1915. The marching band, the concert unit, the drum and bugle corps, the symphony orchestra, the glee club, the string ensemble, the choral groups cannot be guided by one person.

Three Circulation Assistants, Secretary, Student Labor for Library. To serve students adequately in the new, much larger library, which is over twice the size of the old one. At present, there is not enough staff to keep the library open as much as the old one, handicapping students greatly. With the growing collections and facilities, these positions are imperative.

4--To provide the following instructional and research positions in the seven schools:

School of Agriculture

An Agricultural Engineering Instructor and a Graduate Assistant-To relieve shortage in a department with only 1/8 man in rural electrification and 1-1/4 men in farm machinery, two growing fields.

An Associate and an Assistant Agronomy Professor -- to work in soil microbiology, a new field, and on weed control and plant breeding.

Animal Industry Instructor and Teaching Assistant--to pay joint employees of College and Experiment Station who do more teaching than the college portion of their salaries justifies.

Assistant Chemistry Professor, Instructor, Teaching Fellow--to meet a tremendous teaching load which drew comment of the Trustee

Visiting Committee. Enrollment in General Chemistry has increased from 810 in 1951 to 1,295 in 1953, with no increase in staff.

School of Design

Professor, Associate Professor, Instructor in Products Design-to create a Department of Products Design, the only new program we are requesting. In our textile, ceramic, and furniture manufacturing facilities, we emphasize production. If we would add a small staff of designers to teach Products Design, we could train men at a minimum cost to help our industries improve the looks and sales of their manufactured articles--a vital service today.

School of Education

Visiting Professor of Psychology--to conduct graduate courses during part of one semester each year.

Assistant Professor of Psychology-to serve in psychology clinic. Associate Professor of Safety Education-to provide modest beginning of a Safety Education Department to work with various industrial, agricultural, and government groups in creating a strong program of personal safety in all areas where danger is inherent.

School of Engineering

Professor of Chemical Engineering-to teach synthetic fibers and plastics and conduct a graduate program for aiding the industries.

A Professor and an Instructor of Civil Engineering-to work in structural mechanics, offering undergraduate and graduate work.

Three Instructors in Electrical Engineering--to serve one of largest departments now badly understaffed, especially in electronics.

Instructor in Engineering Mechanics--to help department that serves Engineering, Design, and Agricultural Engineering students.

Nuclear Reactor Supervisor, Operator, Instrument Technician, Student Labor-to keep reactor in working, teaching order.

Geologist and Research Engineer—to promote (1) experimental projects on N. C. minerals, (2) research and technical services for minerals industry, (3) projects in specific fields paid by sponsors, (4) cooperation with other state agencies in projects of interest to them, (5) an effective lab for student instruction in the minerals field.

Two Research Associate Professors in Engineering Research—to help administer and evaluate research activity and to broaden its services to industry and other university departments.

School of Forestry

Associate Professor in Pulp and Paper Technology and Pulp Laboratory Superintendent—to work in new pulp technology program, with superintendent maintaining both pulp and paper lab and wood lab.

School of Textiles

Assistant Professor of Marketing--to complete program designed to promote and develop the marketing segment of the industry.

Assistant Professor of Instrumentation—to provide more individual attention needed in such study, teaching the complex controls used by the industry for regulating processes.

Instructor in Physical Testing—to teach and help with study projects and labs in the quality control course, where students are taught to control quality step by step and develop testing methods.

Two Research Associate Professors in Textile Research—to initiate fundamental research in textile chemistry and textile physics.

School of General Studies

Three Physical Education Instructors, Two English Instructors, Two Social Studies Instructors, One History and Political Science Instructor, and One Assistant Professor and Instructor in Economics--To help catch up with long-time needs in the humanities, social sciences, and physical education. This school has more than one-fourth of all class-room instruction for the whole college. Recent growth has overloaded the school. In 1950-51 the school has 79.7 student load per teacher and in 1953-54 it has 94.1 students per teacher.

For Additions and Betterments:

Of the first year's increase \$262,200 is for additions and betterments. Five or six urgent needs stand out here. The Zoology Building, which has been in use since 1912, should be renovated. The floor sags, the roof leaks, and the basement fills with water. If remedied, this building could provide needed classrooms and labs for our growing Military Departments. Two other renovation needs are the YMCA and Pullen Hall, two traditional landmarks. Repairs to the "Y" would be a real investment in the spiritual life of our young people which that organization serves. Everyone knows Pullen. It is in urgent need of repair. If the basement could be renovated to make quarters for our musical activities, the Music Department could give the Physical Education Department badly needed space now used in Thompson Gymn as a band rehearsal and instrument room.

The other areas are: (1) Equipment for the Psychology Laboratory, (2) Basic Equipment for the School of Engineering, (3) Adequate Storm Sewers, (4) Landscaping and Sidewalks in New Areas, (5) Planting-Irrigation System for the Horticulture Farm, and (6) Two Silos at the Dairy Farm. All of these are important. You know of the outstanding work of our Psychology Department, and on very limited equipment. Such groups as McClean Trucking Company, N. C. Motor Vehicles Department, and N. C. Optometric Society have brought industrial psychology and accident problems to the Department and have praised the results highly. With a well-equipped lab, the Department could teach and conduct research in morale, training of industrial workers, supervision of workers, inter-personal relations, human factors in design of equipment, techniques for reducing fatigue, causes of agricultural, industrial, and motor vehicle accidents. The School of Engineering needs funds for equipment in its Civil, Electrical, Industrial, and Mineral Industries Departments. When contracts were let for new buildings some years ago, nearly all funds were for classroom and labs, very little for basic equipment.

-----Permanent Improvements

We realize the General Assembly is faced with many financial problems, and for that reason we are presenting only the most pressing Permanent Improvement needs. Yet, our college is faced with one major and four minor needs that are so pressing I do feel compelled to mention them. The major one is dormitory space for students, involving \$2,000,000. The four minor ones, totaling \$261,920, are:

(1) A sub-basement Research Lab for Textile Research in the Textile Building, (2) Campus Lighting, (3) A Paved Road Behind the Dormitories To Absorb Some of the Traffic Now Overloading the Street in Front of the Coliseum and Dormitories,

(4) Basic Equipment for our Forestry Pulp Laboratory.

The dormitory problem speaks for itself. Already well over half of our 1,155 rooms are occupied by three men, not conducive to good study or living. Normally our dormitories should care for 2,310 men, two to a room as it should be. This is slightly over half the present enrollment. About 300 married students live in temporary campus apartments. The remainder live in fraternities, private residences, and where they can. It is predicted our enrollment will reach 6,000 by 1960. Unless we get dormitory space soon, we shall have normal space for only one-third of the student body of 1960. This problem is acute.

THE AGRICULTURAL EXPERIMENT STATION --

Let's look at the Agricultural Experiment Station next. It is going to take \$3,399,002 to operate and improve our station services during 1955-56 and \$3,111,602 during 1956-57.

We expect to take in \$1,223,659 during each one of the coming two years, leaving \$2,175,343 to be appropriated by our General Assembly for the 1955-56 year and \$1,887,943 for 1956-57.

The increase we need in state appropriations is \$717,600 for 1955-56 and \$430,200 for 1956-57.

We need these increases for several good reasons. The biggest one, of course, is to keep our staff and facilities always capable of searching out agriculture's most pressing problems and solving them as soon as humanly possible for North Carolina farmers—as it did Granville Wilt and Black Shank and as it increased our corn production 80 per cent in six years.

In Agricultural Economics. . we are trying to develop a fuller program in dairy marketing, to supply our milk commission with information and facts on dairy marketing and production as they seek to set up a fair, rational marketing program. Such studies take personnel.

In Agricultural Engineering. . .a major job is to find ways to harvest peanuts mechanically, while reducing costs, improving production, and raising the peanut's quality. Instead of \$40 million a year, we could just as well make \$80 million from peanuts, modern science believes.

In Agronomy. . .to find surer controls for black shank, bacterial wilt, southern root rot, root knot, meadow and stunt nematodes, we should increase our research in soil microbiology.

We should also introduce and test new forage and other crops, especially since farmers now devote nearly $l\frac{1}{2}$ million acres on diverted crops or crops other than our major ones. Farmers need systematic information on diverting their acres.

Only 25 per cent of the labs in Williams Hall are fully equipped and 20 per cent have no permanent lab fixtures. Lab facilities for certain tobacco, cotton, weed control, and irrigation studies are urgent.

In Animal Industry. . .North Carolina's growing livestock industry has increased the demands for more specialists, such as a bacteriologist in animal disease research. The requirements for labor, supplies, and utility services for care of the animals and for taking full records have increased so greatly, some of the research projects will have to be curtailed unless more funds are provided. The work of this Department has helped raise North Carolina from 29th to 23rd in the nation's livestock industry.

Because of campus expansion, we must move farther away. This will require clearing cutover timber land, fencing, and building a new bridge. To secure more useful results from our nutrition research, a most important service to our livestock industry, we hope to renovate two old barns near a recently built structure to house experimental animals.

In Botany. . .fundamental research on processing and preserving vegetables, fruits, meats, poultry, and milk requires an additional bacteriologist, lab assistant, temporary labor, supplies, and equipment.

In Entomology. . .to find real control for household pests and insects that affect farm livestock, we must study their life habits. Similar research in other states shows dairy cattle produce 15 to 20 per cent more milk where flies are controlled. Beef cattle in Kansas averaged 50 pounds more gain per animal when they were kept free of insects. Similar results are possible in North Carolina.

In Experimental Statistics, Forest Research, and Genetics. . .leasing more computing machinery to record, classify, and analyze the large volume of

Station research is more efficient and economical than adding personnel. A nursery program, to identify seed sources of forest species capable of maximum timber production and to introduce superior tree lines, requires a forest geneticist and two graduate assistants. To improve plant and animal breeding programs, we should increase our study of inheritance principles and changes in characteristics of large populations and rapidly multiplying organisms.

In Horticulture. . .to strengthen our research in vegetable and fruit crops requires more technical and graduate assistance, labor, supplies, and operating costs. It also requires consolidating, relocating, and adding two new greenhouses in proper proximity to Kilgore Hall. The headhouse was built to be extended 60 ft. when the greenhouse moving and consolidation is done. Relocating and adding these greenhouses for horticulture is important, for vegetable and fruit crops have become a vital part of our North Carolina economy. In terms of the family alone, horticultural scientists say the average good home garden in North Carolina is worth \$400 a year to the family.

In The Peach Station. . . over 60 acres of new land on this farm now coming into production require more labor, supplies, etc. for cultivating, spraying, harvesting, and taking records on these plants.

In Plant Pathology. . .to continue the fight against nematodes, which do \$30 million damage to Tar Heel tobacco a year and unestimated damage to other crops, we need at least \$3,000 more feet of greenhouses for maintaining, growing, and testing the reaction of various nematodes with various plants which they attack. For year-round development of disease-resistant tobacco, cotton, field, forage crops, etc., we must have the controllable conditions of more greenhouses.

There is also need for a soil testing service, giving the species and relative numbers of nematodes in a given soil—and with it research to find responses the various species make to specific treatments.

In Poultry. . . research on processing, packaging, refrigerating, storing, and marketing poultry meat requires a director and assistant. The industry, concerned over such matters as unsightly but harmless flesh blemishes affecting sales, has urgently requested such a program.

The hazard of large numbers of diseased chickens, with respiratory, air sac, or Newcastle diseases, being housed in the Poultry Science Building with the working labs is self-evident. A field unit is required.

In Publications. . . our budget for getting the results of our findings to the farmer has long been inadequate. Improving farm technology can hinge on facilities for getting the results to the people--publications.

In Station Farms. . .to operate the enlarged program of research now beginning at the Clayton Farm requires more secretarial help, labor, supplies, etc., because there is nearly twice the usable land than there was at McCullers--all of it close enough to college labs for daily checks.

In Tobacco Investigations. . .at no time has there been a greater need for all the information we can find on the tobacco crop, if our people are to retain their half billion dollar income from it.

Recent questions in the press about tobacco and health demand we learn everything possible about the properties of this crop and the ways it can be modified.

We must study its biochemical composition, its changes in aging, its manfacture. We must study its burning in cigarettes and pipes, how the ingredients can be modified by cultural practices, harvesting, curing, storing, and processing. We must study how this crop inherits chemical and physical characteristics, how these properties change within the range of genetic germ plasm available, and how these characteristics can be changed by breeding methods. All of this in an effort to get crops that meet consumer needs and wishes.

Foreign competition in tobacco production continues to mount, so we must know how to produce the highest quality tobacco available in the world more economically than we have done in the past if we are to keep a place in the world market or even maintain our present position at home.

To strengthen such research requires funds for the following areas:

- 1--For chemical and physical studies of factors that affect the composition and quality of tobacco.
- 2--For genetic and breeding studies, with special emphasis on the characteristics that affect the quality of smoke.
- 3--For agronomy studies in irrigation, cultural practices, and plant propagation.
- 4--For studies on insect control and on effective and safe use of insecticides, with emphasis on reducing residue hazards.
- 5--For strengthening fundamental studies on black shank and on the reaction of nematodes to different tobacco strains carrying disease resistance.
- 6--For studies of new production methods that will lower work cost, be economically sound, and increase labor efficiency.
- 7--For projects in all areas of irrigation, mechanization, and curing.
- 8--For studies of the anatomy of the plant and of possible physiological changes toward control of suckers.
- 9--For operating tobacco farms at Whiteville, Greenville, and Rural Hall to provide for increased experimental work.

THE AGRICULTURAL EXTENSION SERVICE --

Let's look at the Agricultural Extension Service now. It is going to take \$4,299,262 to operate and improve our extension service during 1955-56 and \$4,382,033 during 1956-57.

We expect to take in \$1,936,847 during each one of the coming two years, leaving \$2,362,415 to be appropriated by our General Assembly for the 1955-56 year and \$2,445,186 for 1956-57.

The increase we need in state appropriations is \$315,140 for 1955-56 and \$397.911 for 1956-57.

The reasons for these increases could be cited just as easily by our citizens out over the state as they can by us, for the Agricultural Extension Service is the part of our college which takes the teachings and findings of agriculture to the people for everyday use. It can be summed up in one sentence. Through all known educational methods such as demonstrations, meetings, farm and home visits, tours, bulletins, news articles, circular letters, radio and TV programs, and personal contacts, extension takes to the people the latest practical developments in the production, harvesting, processing, and marketing of agricultural commodities and the best methods of improving family living and community progress.

To enable this program to meet the growing complexities of production and marketing and the rise of rural living-educational standards, the following items are requested:

County Agents--in the county the agricultural and homemaking program is put into operation. With from 1,000 to 6,000 farms in most counties, farm and home agents are swamped with the job of keeping the folks up to date on the latest information and methods of farming and homemaking. If all farms were alike and all homes the same, it would not be so difficult. Each farm and each home is different. Their needs vary from farm to farm, from area to area. The greatest endorsement of our Extension Program is that many counties have either appropriated the county share of funds, or indicated their intention of doing so, to add Extension personnel. The job now requires 17 additional county agents, and six clerks and an Assistant State Leader for Negro Home Demonstration work.

Specialists—to adapt the findings of research to practical farm and home application. They keep the farm and home agents up to date on all the advances in their respective fields. These areas, with sufficient secretaries to prevent overloads, include specialists in. . .

- . . .Farm Machinery--to increase efficiency in our farming through mechanization. Cver 100,000 tractors have come to North Carolina farms since 1940. Complex machinery requires education in selection, use, care, adjustments, and repair. Irrigation requires answers. Based on 1953-54 experience, to-bacco farmers would have grossed \$72 million more income if they had irrigated one-third their acreage.
- . . . Forage Crops—to increase the needed forage crops in the 100 counties. It is impossible for one specialist to increase feed acreage and yields as fast as our livestock program requires.
- . . .Meats and livestock--to reduce losses and improve quality in an expanding, profitable livestock program of swine, beef, cattle, sheep, and meats.
- ... Animal Diseases -- to provide educational help against the loss of livestock, which runs into millions of dollars yearly. Mastitis, bloat, cholera, internal parasites, and sterility require educational help.

- ...Demonstration Forests and 4-H Forestry Work--to help double forestry work with 4-H members. This will pay great dividends. Over 30,000 4-H members are working on forestry projects. Each county needs at least 10 to 20 acres permanent forestry demonstration.
- . . .4-H Club Work--to serve over 142,000 4-H Club members in developing projects, preparing subject matter, and supervising a large camping program.
- . .. Nursery Improvement--to help expand this North Carolina industry. The production of flowers, bulbs, and nursery stock is a \$25 million industry in the state. Even with great growth we still import a high per cent of our ornamentals and flowers.
- . . . Diseases of Fruits, Vegetables, and Ornamentals—to specialize in and prevent losses from these diseases which cost \$33 million yearly.
- . . .4-H Poultry Projects and for Negro Poultry Work--To help advance an industry which has grown in gross value over \$40 million since 1949. Increased work with 4-H Club members will help industry. Poultry offers great possibilities for Negro farmers.
- . . . Community Organization and Development--to work in the field, organizing and developing communities, to help agriculture move forward.
- ...Clothing--to provide a Negro specialist who will help farm women and girls in selecting, buying, making, and repairing clothing for themselves and families. Most of the 27,000 Negro girls in 4-H are carrying clothing projects.
- . . . Food Conservation and Marketing--to provide a Negro specialist in canning and freezing fruits and vegetables, and canning, freezing, and curing meats, important to all farm families, especially low income ones.
- . . .Nutrition--to work in selecting, preparing, cooking, and serving nutritious, appetizing and economical food, which affects the health and economy of every family.
- . . .Home Management--to expand the home demonstration phases of combined farm and home planning, which is proving very effective in raising farm incomes and standards of living.
- . . .Housing and House Furnishings—to serve an important area. No program has and will mean more to farm people, since adequate housing, furnishings, and labor—saving appliances are a significant part in the better living standards, morale, and prosperity of rural people.

INDUSTRIAL EXPERIMENTAL PROGRAM --

In closing, I would like to talk to you briefly about a new but highly worthy program we shall propose to our 1955 General Assembly. We call it an Industrial

Experimental Program. It compares very modestly in the engineering field to our Agricultural Experiment Station in the agricultural field. As now planned, this new program will take only \$62,500 a year to initiate -- a modest sum when compared to research in other more traditional fields.

Our reasons for optimism are clear. There is a great opportunity today in North Carolina for research and experimental work that will utilize our state's raw materials and help develop more small industries. Such a program should include two basic areas: (1) laboratory study of the uses of our raw materials; (2) demonstration which will make the findings useful to industry. The major goal is to create new processes and uses that will stimulate more of our industries to produce consumer products right here in the state. Consumer products, bringing good profits and wages to our people, should be the end result of our industrial activity.

The work of our Agricultural Experiment Station in the past 20 years proves the value of using scientific know-how to develop North Carolina productivity in agriculture. The proposed Industrial Experimental Program would work to develop comparable productivity in industry. North Carolina and the whole Southeast is growing more industrial every year. Today our state is developing a diversified or combinational economy blended between agriculture and industry. More industry means a stronger economy. We lead the Southeast in so many other areas, it challenges us to lead it in the march toward greater industrialization. Our Industrial Experimental Program is designed to further such industrialization and to develop the natural resources of our state.

Our only source of tax money is the wealth of our state and people. One way to increase our tax revenue without raising our tax rate is to stimulate continued development and growth. Increased wealth in an industry produces increased tax revenue for the equal benefit of our people. Look at wilt-resistant tobacco, hybrid corn, and Atlas wheat in agriculture and what they have meant to our prosperity--and to our tax revenue. These fruits of agricultural research have not benefited a favored few. They have benefited all of us, on the farm and off. Likewise, industrial advantages to one area of productivity will benefit all our people, in the business and out.

Actually, our proposed Industrial Experimental Program is open to all industries of the state. The immediate projects suggested below are chosen because past work in them indicates promising results at this time.

It is apparent our state should continue to build its economy toward the happy balance--between agriculture and industry--together for a greater state. We urge the creation of this Industrial Experimental Program at State College to aid in building this agriculture-industry balance. The following summaries suggest a program for the first two-year period.

1--Olivine--Important in Metallurgical and Ceramic Industries

To develop Olivine, a rock consisting largely of mineral forsterite which is usable as both a foundry sand and a refractory material, and to promote its in-

dustrial use in the state. Several million tons of high grade Olivine are located in Western North Carolina.

2--Pilot Plant Operation--For Ceramic Industry

To acquaint the people of the state with the industrial processes used in making such products as china and pottery, wall and floor tile, electrical porcelain and chemical porcelain and abrasive products, etc. The only one of these type products manufactured in North Carolina is pottery, and that on a small scale. Since most ceramic products can be made just as efficiently in a small plant as in a large one, it is a logical industry to develop in this state by utilizing local capital and labor.

3--Tannin Produced From Bark of North Carolina Pine Trees

To utilize wood wastes for the production of useful chemicals. We have extracted useful tannin from pine bark. Now we want to find uses for it. It is useful in the leather industry, of course, and as an additive for drilling muds in the oil industry. We want to find other uses for it and for the wasted lignin and cellulosic materials that come out of the extracting process.

4--Pine Waste Extract for Control of Corrosion in Boiler Tubes and Condensate Return Lines \cdot

To determine methods and processes by which pine waste extract can be used to control corrosion in boiler tubes and condensate return lines. The public water supplies of North Carolina are far more corrosive, on the average, than those of the nation as a whole. It would help the economy of our state to determine how effectively pine bark extract might prevent this kind of corrosion, to determine the conditions under which the extract will be effective, and to inform the people of the state there is remedy for their corroding boiler tubes.

5--New Synthetic Materials and Dimensional Control for Furniture Industries

To study methods of utilizing North Carolina hardwoods and maintaining dimensional tolerances for furniture manufacture. Furniture manufacturing is one of the most important industries in the state. Recent development in plastics, molded resin compounds using wood as a filler, and improved materials offer a real opportunity for modernizing the industry.

This is the picture of the biennium ahead. This is the heart of what we shall present to our General Assembly. I suggest again you discuss these opportunities with your Senators and Representatives. They will be glad to hear your views, because that is the way we continue our march up the road. We must move forward. There are ways and means for those with the courage to seek them, because there always have been.

Sincerely,

Carey H. Bostian Chancellor

STATE COLLEGE

	1954-1955	1955-1956	1956-1957
TOTAL REQUIREMENTS	5,961,995	6,708,865	6,548,665
RECEIPTS	2,967,591	2,967,591	2,967,591
APPROPRIATION	2,994,404	3,741,274	3,581,074
APPROPRIATION INCREASE REQUESTED		746,870	586,670
1. Special Faculty Requirements		192,897	192,897
2. Instructional Equipment and Supplies		29,404	29,404
3. Merit Salary Increments		89,243	189,243
4. Research		38,900	38,900

DRAWER 2190 HARTFORD 2 CONN.

May 24, 1954

Dr. Carey H. Bostian, Chancellor North Carolina State College Raleigh, N. C.

Dear Doctor:

It was such a delightful pleasure to meet you and Mrs. Bostian during my 40th reunion, which too I thoroughly enjoyed.

Your talk at the Alumni Luncheon was indeed most interesting, and I hope it will be carried in "The Alumni News" because I don't think the Alumni fully appreciates just what a big business State College really is.

Hope some time I shall soon be able to attend a meeting of the Development Committee, for I have never been able to make one. This has brought about much embarrassment, but they have refused to accept my resignation so I am hoping to put in an appearance when possible.

Am sure under your leadership, the college will continue to go forward, and with kind regards and best wishes.

Yours sincerely,

Graham Id. autrony

Two Annual Report Messages

"And in the center . . . our alumni"

To everyone who participated in the fine record set by our 1954 Alumni Fund, your Alma Mater is genuinely grateful. To everyone who is considering future participation, we invite you to share in one of the most important programs in the history of the college.

The extent of its importance was brought home most vividly to me recently. According to a report from Ohio State University which came across my desk this month, Communist Russia has fifty per cent more students enrolled in colleges than the United States and is turning out 42,000 well-trained engineers a year, while the United States trains 23,000 a year. This is a startling thing—to learn that a political system sworn to over-throw our way of life by force, if possible, is outrunning us in the race for know-how. These figures may be impersonal statistics to some, but to most of us with families and loved ones they make us stop and think—and plan.

In a sense, they put the challenge and responsibility on our great land-grant colleges that provide technological education, of which State College is a recognized leader. And right in the center of this challenge are our alumni—the successful leaders of industry, agriculture, business, and government who went out as eager young men to help build here in America the greatest system of industrial and agricultural enterprise yet known to man. How long we keep the lead depends on such institutions as State College—and on the attitude and interest its alumni have in its vital programs of teaching, research, and extension.

State College's greatest hope of existence comes from its alumni—and others who are its friends in legislative halls, industrial firms, business houses, farm groups, and government circles. But the pace is set by our alumni. The more active our alumni, the more active our friends. The more responsive our alumni, the more responsive our friends. You cannot separate the reputation of a college from the reputation of its alumni any more than you can separate the reputation of their college.

There is no better place to be active, to be responsive, to be a part of your Alma Mater's efforts to develop young American minds than through your Alumni Fund—a program that works day and night to improve, to increase, and to extend the welfare and prestige of your college.

As we realize this, our participation in the affairs of our Alma Mater will surely grow, I believe, until N. C. State will stand second to none as an educational and research center where young Americans are taught to build and improve our traditional system of free, competitive enterprise and to protect our national and personal freedom. In this age, that is uppermost.

Carey H. Bostian Chancellor

"The challenge that faces us . . ."

Congratulations! Your 1954 Alumni Fund broke all records of Annual Giving yet experienced by our college. Your generosity and loyalty made the record you set—\$23,159 from 2,441 alumni. We grew by nearly \$8,000 and 500 participants in this second year of our new, voluntary, non-dues Alumni Giving program.

As you look over the annual report, notice the response by classes, by counties, by states, and by other nations. It is interesting to see how many of your classmates joined you and how many other State Men you know. In a sense, they are a who's who in the remembrance of Alma Mater.

Notice how many of us participated this year, subtract that from 14,000, and you have the challenge that faces us. Our Alumni office has addresses for about 14,000 of us. Place 2,500 beside 14,000, and you see we have just begun to grow. We shall approach 100 per cent participation, I believe, when we solve one basic problem—putting off or laying aside our Alumni Fund reminder each time until we forget it.

This it not deliberate or calculated indifference. We just don't take time to sit down, figure a little, and get off our part in the Alumni Fund while it is still on our minds. There's probably some sub-conscious psychology behind this, something like the feeling "my two-cents won't mean anything." That's wrong, very wrong. Every gift, every participant is important and useful.

In this 1954 report, the name of the \$1.00 donor appears beside the \$100 donor, with no sizes mentioned. Why? Because participation, voluntary and willing participation, is the whole backbone and foundation of this program. Amounts are left up to the ability and wishes of the individual. It is important each alumnus realize that.

It is also essential each alumnus realize the importance of our Alumni Fund. It is important for many reasons, but largely as a service organization to the students and college of both yesterday and today. Many of these services are cited in the enclosed folder. In the eyes of the world, the Alumni Fund is a major barometer of the interest State College alumni have in their Alma Mater. As it grows and improves along with the college, so grows our name and prestige as State Men.

In figuring your part in the 1955 Fund, stop long enough to compare its size to the value of the education you received at State College. After that, 1 know we shall take another major stride toward 100 per cent participation in 1955.

Guy F. Lane Chairman, Alumni Fund

N. C. STATE COLLEGE ALUMNI FUND

A Service Organization

Although we North Carolina State College alumni are folks of diversified interests and training, there is a common ground where the agriculturist, the engineer, the textiler, the forester, the architect, and the teacher can become one. That ground is our Alumni Association—the organization which administers our Alumni Fund.

This combination of State Men, led by officers and directors they elect by secret mail ballot, works toward four basic ends:

To promote the growth, progress, and general welfare of State College.

To foster among its former students a sentiment of regard for one another and devotion to Alma Mater.

To interest prospective students in attending State College.

To help today's students understand and feel the heritage, the mission, and the spirit of N. C. State.

When State College men and women contribute to their Alumni Fund, they automatically become members of their Alma Mater's Alumni Association, electing its officers and directors, receiving the alumni magazine, and participating in other phases of the program.

This association of State Men, which administers the Alumni Fund, is basically a service organization that puts our Fund to work in many effective areas.

It keeps a current address on every alumnus it can locate, a hard job. It keeps master, class, and geographical files. It keeps a biographical file on alumni, a kind of placement service with important records of weddings. births, deaths, promotions, and photographs which have helped recomhend many alumni for promotions and new jobs.

It is the immediate contact between the college and its alumni, serving State College Clubs in each North Carolina county and 28 clubs in other states with programs of speakers, movies, slides, etc.

It publishes the alumni magazine, State College News, which is mailed to each person who contributes to the Alumni Fund. Published monthly, this interesting magazine features in each issue a lead story on some phase of the college program; a popular condensation of major news events affecting the college, called Campus

Clippings; a regular sports round-up interpreting the teams of each season; and hundreds of items and personals on individual alumni by classes.

It sponsors a technicolor movie with sound featuring various activities of the college and its allied agencies—a project into which it invested \$3,500—for local clubs to use in high schools, before civic clubs, etc.

It helps State College Clubs in their efforts to interest local high school graduates in the college, with printed matter, college movies, and personal contacts. . helps parents get boys enrolled in college, and coaches get in touch with promising athletes. . . and answers thousands of inquiries a year from former students about the college and other alumni.

It initiated the movement to have the N. C. State College Foundation borrow \$1,100,000 for building Owen and Tucker domitories when they were urgently needed, saving the State over \$550,000 by being contracted before heavy inflation. And it assisted in securing housing for Verville.

It sponsors Alumni Week, the first weekend of each May, enabling returning grads to see the seven schools in operation, visit former teachers, view departmental growths, and enjoy a weekend of exhibitions, games, banquets, parades, open houses, class reunions, and N. C. State fellowship.

It allocates a portion of the Alumni Fund each year to the college's new Talent For Service Scholarship program, a grass roots movement to provide worthy and outstanding high school graduates of North Carolina with an opportunity to attend N. C. State.

It maintains the mailing list and provides the facilities and manpower for mailing Statelog, a newslog interpreting developments at State College to over 27,500 alumni and friends. Such a mailing each month is a major job in itself.

It finances travel expenses of most of the speakers for alumni club programs; printing and mailing the alumni magazine; postage, telephone, printing, and supplies; part of the secretarial staff; and other facilities for serving our alumni and their college.

It secures chairmen for the Talent For Service Scholarship Screening Committees in 100 counties and six districts and helps in many ways with our annual High School Day. It gives its complete support to the College Development Council, with special emphasis on the Bequest Program and Nickels-for-Know-How.

It lends its aid in many ways to the teaching, research, and extension functions of the college and to intercollegiate athletics. It works with all student groups, including dormitories and fraternities, and maintains close contact with every senior class, preparing them for actual participation in alumni affairs.

OFFICE OF THE CHANCELLOR

December 17, 1954

copy

Mr. Frank Turner The Budget Bureau Raleigh, North Carolina

Dear Mr. Turner:

You are authorized to proceed with the Alumni Building project as approved by the Directors of the North Carolina State College Foundation and the State College Alumni Association. A majority of the members of the Trustees' Building Committee approved the proposed additions to the Alumni Building last April.

On December 15 I asked Mr. David Clark, Chairman of the Trustees' Building Committee, if he thought it would be proper to have the Trustees' Building Committee approve the revised plans for this project. Although Mr. Clark still considers the project an undesirable and unnecessary one at this time, he stated that he did not consider it necessary for any further approval by the Trustees' Building Committee.

You are, therefore, authorized to proceed with the project according to action of the Foundation and Alumni Board of Directors.

Sincerely yours,

Carey H. Bostian Chancellor

November 19, 1954

Mr. H. W. Taylor Alumni Office Campus

Dear Pop,

Let me give you a brief report on the two alumni meetings which I attended this week at your and Chancellor Bostian's request,

- 1) The two meetings, one in Reidsville and one in Goldsboro, were among the "best" alumni meetings I have ever attended. Around 40 people were present in each case, and the club was vigorous and enthusiastic in its attitudes and responses. There is good leadership in both clubs.
- At Reidsville I had a very satisfactory conversation with the Legislative Committee: Dave Percell (Draper) Roy Blaylock and John Love (Reidsville).
- 5) This Legislative Committee had arranged to have both the senator and the representative from Rockingham county present at the alumni meeting: T. C. Stone, Senator and Radford Powell, Representative. These men are not State College alumni, but they begame very enthusiastic during my presentation of some of the things we are trying to do at State College; and at the end of meeting both men voluntarily arose to express their full commendation of the work State College is doing and their anticipation of the increased effectiveness in the State in future days.
- 4) The two members of the Talent Fund Committee were not present: B. L. Pike (Reidsville) Lester Fulker (Reidsville). However, I talked with the President and he agreed to pass on the matters of interest to this committee which I carried to them.
- 5) There was some concern in the Reidsville group about the late notices of the meeting which they received. Some were actually received on the day of the meeting, and it was generally felt that at least an additional dozen would have been present if the notices had been received sooner. I emplained, of course, how busy you were, etc., but merely passed this on for your information.
- 6) At Goldsboro under the vigorous and enthusiastic leadership of D. J. Murray, the officers of the club, the Legislative Committee and the Talent Fund Committee, with one or two absent, met me at 5:50 for a discussion of special matters before the general meeting at 7 p/m.

Mr. H. W. Taylor Page 2 November 19, 1954

- 7) I attach hereto a copy of the officers and committee members of the Wayne County Club. Note that Mr. Rose and Mr. Kemp are the two State Legislators from Wayne County. They were not present at the meeting but a number of people indicated that they would be in contact with them shortly on the matters discussed.
- 8) There was a very strong feeling in this club that the scholarship activities currently underway at State College were exceedingly necessary and useful, but there was also a most vigorous opinion that the scholarship funds should not be free gifts to the recipients but should be more in the nature of loans which might eventually be returned to the scholarship fund by the student in later years.

I am of the opinion that both of these alumni meetings were well worth while, and that the programs of State College will receive strong support from the members in these two clubs.

Sincerely yours,

Clifford Beck M.K.

Mr. J. C. Frink Tobacco Associates Inc. 1015 Ring Building Washington 6, D. C.

Dear J. C.:

I am glad to learn that Wednesday, November 17, will be a convenient date for the Washington alumni. I am reserving that evening and shall await further details later. I will not need to know the exact time and place before that week.

Your expression of confidence in my administration was very encouraging. If I have gotten off to a good start, it is because of the wonderful support from alumni and friends of the College.

If I do not see you before November 17 I shall look forward very much to seeing you at that time.

Sincerely yours,

Carey H. Bostian Chancellor

J. B. HUTSON PRESIDENT

August 4, 1954

Dr. Carey H. Bostian Chancellor North Carolina State College Raleigh, North Carolina

Dear Dr. Bostian,

If you will allow me at this late date, I wish to extend my congratulations to you for accepting the position as Chancellor of State College. It gave all of us who know you a tremendous thrill when the news finally came through that you were it.

Whenever I run across a North Carolinian here in the Washington area and when I am traveling in North Carolina from time to time, I almost always inquire as to how the new Chancellor is making out. I invariably get, of course, highly favorable replies. I, in turn, beam with pride and state that I have known you personally for many years.

Just yesterday I received the July issue of the Statelog and was really amazed at the work being done at the College in making opportunities for some of the outstanding high school graduates of North Carolina to attend State College under the Development Program. A tremendous amount of credit is due those who are responsible for organizing and administering the various programs of this type that are now being undertaken at the College.

As you will recall, it was I who asked you sometime during the spring Alumni Meeting when you would be in Washington and if it would be possible for you to meet with our club. At that time it was your impression that your Washington meeting would be during the week of November 8 and so we tentatively set November 10 as the date. November 16 or 17 will suit us just as well since we arrange our meetings at such times as is necessary to coincide with outstanding speakers or some activities connected with State College. We ordinarily meet on Wednesday, so if you have no choice between the two, we will designate Wednesday evening. November 17. The exact hour and place we will have to determine later. We are all looking forward to your visit with us.

I was very sorry to have missed you during my recent whirlwind trip through Raleigh. I did talk to Pop and Colonel Harrelson briefly.

Finally, I would like to convey to you my most sincere wishes in your new undertaking.

ALUMNI ASSOCIATION OF NORTH CAROLINA STATE COLLEGE, INC.

BOARD OF DIRECTORS MEETING

October 16, 1954

Presiding - Frank B. Turner, Chairman

- 1. Minutes of last meeting.
- 2. Recognize and welcome new members.
- 3. Resolution of thanks to retiring members.
- 4. Report on use of Miss Thompson's personal car.
- 5. Confirm vote, by mail, to change Alumni Fund to calendar-year basis.
- 6. Consider calling Alumni Fund Committee the Alumni Fund Council.
- Recommend that membership of Alumni Fund Committee be set up as follows:
 - a. Appoint 2 members for term expiring in 1957
 - b. In 1955 appoint 2 members for term expiring in 1958
 - c. In 1956 appoint 2 members for term expiring in 1959
- 8. Recommend payment of \$2500 to President Gordon Gray's revolving fund.
- 9. Report on Alumni Fund, July 1, 1953 Sept. 30, 1954.
- 10. Report on Alumni Memorial Building Plans.
- 11. Request from N. C. State College Foundation for payment of \$4,614.41 from Rental Fund.

ALUINI BUILDING COMMITTEE

The Alumni Building Committee met in the College Union at 12:30 p.m. on Wednesday, October 13, 1954.

The following members were present: Others present were:

Frank B. Turner, Chairman W. W. Harper Raymond A. Bryan C. W. Mayo R. D. Beam J. M. Peden L. L. Ray R. B. Reeves H. W. Taylor

C. W. Tilson

Frank B. Turner, chairman of the committee, presided. R. B. Reeves presented preliminary sketches of the building plan and estimates of costs. After a considerable period of discussion by all present, the following motion was made by Beam and seconded by Peden:

That the set of plans presented today is approved by the Alumni Building Committee and recommended for approval to the Alumni Association Board of Directors; and it is also recommended that plans be made immediately to proceed with the actual construction of the building, including negotiations to borrow the amount of money necessary to complete the job. Motion carried unanimously.

It was agreed that the committee can change some of the interior arrangements as the building work progresses if they feel it will be wise to do so. The meeting adjourned at 2:15 p.m.

> H. W. Taylor Secretary

ALUMNI BOARD OF DIRECTORS

March 29, 1954

The Board of Directors of the Alumni Association of N. C. State College, Inc., met on Monday, March 29, 1954, at 2:00 p. m. in the Alumni Building, with chairman of the Board, R. I. Mintz, presiding. The following were present:

OFFICERS:	DIRECTORS:	E. H. Forbes	OTHERS:
Frank B. Turner, President	R. J. Barnes	W. B. Hodges	Guy F. Lane
H. W. Taylor, Secretary	R. A. Bradshaw	N. A. McKeithen	Ralph B. Reeves
R. I. Mintz, Chairman	R. A. Bryan	H. B. Mann	L. L. Ray
	W. T. Cox	H. H. Underwood	Elizabeth Burgess

A motion was made by Hodges, seconied by Underwood, that the reading of the minutes of the last meeting be dispensed with, inasmuch as they had been mailed to each member of the board. Motion carried.

Turner reported that he had been instructed at the last meeting of the Board to pursue the subject of the Alumni Memorial Building further and see what could be done. In order to get under way, he asked Holloway and Reeves to make sketches and see what we could do with the money on hand. He talked to Allen Maxwell of Goldsboro who drew up the other plans, and he said we were under no obligation to him and if we got someone else to do the job, it would be okay. Also he mentioned that we are under no obligation to Holloway and Reeves for making the sketches.

The plan proposed calls for an addition on the north side of the building. Plans show how it would fit in with the other part of the building. In the new wing, there will be a lounge on the ground floor. Only the lounge will be airconditioned. There will be three baths and four bedrooms on the second floor. The cost of the work proposed is estimated at \$78,500, of all the plans are carried out and if the estimates are correct.

Turner also reported that he had talked with the College Administration, and he felt that if the Alumni Association wanted to follow through with this plan, the College would be agreeable to the plan also.

He submitted the following statement of estimated costs:

Lounge 24' x 30' with Memorial bedrooms (or offices) above Renovation of Heating system in ex	\$52,500.00
ing, conceal risers, and add con	
Build records vault and recondition	on baths in
present building	7,500.00
Remodel and redecorate front secti	
building	7,500.00
Ventilate second floor	1,000.00
Design fee	4,500.00
Furnish Memorial and new rooms	3,500.00
Tota	1

Turner pointed out that the figures included the putting down of tile in the baths that do not have it and retiling those that do have it. Fixtures would also be replaced.

It was pointed out by Bryan that we have about \$70,000.00 on hand to be used toward the new building program.

There would be no breaking down of original walls if at all possible. The work could be done step by step and since the money is not public funds, the work could be done on a straight contract.

The lounge or wing could be made longer and have a room for a small kitchen containing a refrigerator and hot plate and some cabinet space, or the small room in the northeast corner of the present building could be converted. The stairway could also be turned around so that the front of the new wing would not be directly in front of the door to the lounge.

Mann indicated that he thought the roof should be made more uniform.

Reeves stated that it would be more economical to remove the high part of the roof than to make the new part conform with the roof on the present building.

There followed a general discussion.

Taylor pointed out that the College has repaired all leaks in the roof on the present building. They are proposing to do painting on the inside, but they had been asked not to paint until the Board decided what they were going to do. They have already painted the outside of the building.

Turner stated that there would be two plaques in the Memorial Lounge or Wing. One would contain the names of alumni who lost their lives in World War II, the other would contain a list of those who contributed #100.00 or more to this building.

Turner stated that the present building committee had too many people to function well, and he proposed that we discharge the old committee and appoint a smaller one.

Ray pointed out that the State College Foundation Board would meet on the 7th day of April, and he would like to have a recommendation from this Board to present to them.

A motion was made by Bryan, seconded by Mann, that the board adopt the plan as submitted by Turner, reserving the right to make any changes that need to be made, keeping as near as possible within the money estimated. The plan includes the preliminary plan itself, together with a proposal of estimated costs. Motion carried.

A motion was made by Forbes that the present Alumni Memorial Building Committee be discharged with the thanks of this Board and that a new committee consisting of three men be appointed by the chairman of the Board to serve as a new building committee with such representatives as the State College Foundation may appoint. Motion was seconded by Cox and duly carried.

A motion was made by Turner, seconded by Mann, that the newly appointed Alumni Memorial Building Committee present this proposed plan to the State College Foundation and to the Building Committee of the University Board of Trustees and that after they get the approval of these two groups, to proceed to get the building constructed and ready for use by the Alumni Association. Motion carried.

Chairman Mintz read a letter from R. V. McPhail, directed to H. W. Taylor, in which he asked for the use of the alumni mailing list in soliciting votes for his election to the Board of Directors of the Alumni Association. Mintz also read the letter containing Mr. Taylor's reply to Mr. McPhail.

A motion was made by Turner, seconded by Forbes, that the list not be furnished to Mr. McPhail because it would take too long to prepare such a list. Motion lost.

A motion was made by Turner that we withhold the alumni mailing list and not make it available to any candidate for office of any kind. Motion was seconded by McKeithen. Motion carried.

Guy F. Lane, chairman of the Alumni Fund Committee, made the following report:

"Total - July 1, 1952 - June 30, 1953 \$15,645.78 from 1,960 alumni Average - \$7.98

Total - July 1, 1953 - March 27, 1954 \$15,678.08 from 1,629 alumni Average - \$9.62"

Lane stated that we ought to work for more contributions as well as for larger gifts from special contributors. The more people contributing, the more people we will have who are interested in State College. Then the money will automatically continue to come in. He stated further that he was proud of the fact that we are way ahead of last year as far as the total amount contributed is concerned.

Lane also reported that he believed the number of contributors would increase as the year came to a close, as many would put off sending in their contributions until the last minute.

Turner reported that the Meritorious Service Award Committee met on February 27. 1954, for the purpose of selecting the recipient for the Meritorious Service Award. Turner announced in behalf of the committee, that they had selected John Washington Clark, class of 1906, to receive this award.

Chairman Mintz presented the following slate of candidates for office as a report from the nominating committee:

PRESIDENT

R. A. Bradshaw, 134, Salisbury J. Y. Lassiter, '35, Goldsboro

ATHLETIC COUNCIL

H. J. Carr, '28, Clinton F. W. Warrington, '26, Charlotte DIRECTORS

M. E. Aycock, '36, Laurel Hill

W. C. John, '23, Richmond, Va.
A. A. Johnston, '26, Wilmington

A. C. Little, '31, Conover

R. V. McPhail, '39, Gastonia S. W. Turner, '40, Winston-Salem

Taylor reported that the Chancellor has asked that we supplement the salary of

Santford Martin, Jr. He stated further that Martin had been a tremendous help to us in writing many letters, other mailing pieces, and with the magazine.

A motion was made by Bradshaw, seconded by Hodges, that the Alumni Association pay \$50.00 a month toward the salary of Santford Martin, Jr., for the next three months, with the understanding that the College will put this amount in the Budget as of July 1, 1954, and will pay his full salary thereafter. Motion carried.

Meeting adjourned at 4:00 p. m.

WAKE COUNTY STATE COLLEGE CLUB

September 29, 1954

Dear Wake County Alumnus:

The annual Fall Meeting of the Wake County Alumni Club will be held on Friday night, October 8th, at 6:30 p.m. in the new College Union Building on Hillsboro Street.

The founding fathers who built the barn for the two mules could not have dreamed of such a fine structure as the College Union Building. It would grace any college campus in the world. Come and inspect it and join us in another evening of food, fun, fellowship and songs—and, oh yes, we'll have something intellectual on the program too. Dean Malcolm Campbell, of the Textile School, is going to tell us about his trip around the world.

We want you to come, bring your wife, and any friends whom you care to invite. So please fill out the enclosed form and return with your check for the number of tickets you wish, in the enclosed envelope.

It is necessary that we know by Wednesday morning, October 5th, how many will be on hand so that we will know how many meals to prepare. You can pick up your tickets at the door.

Chancellor Carey H. Bostian Holladay Hall Campus

Dear Dr. Bostian:

This is with reference to page 22 of the questionnaire which you gave me with six questions on it. I am going to try to give you the answer to them in this letter and then after they meet with your approval, you may have them transferred to the printed form.

1. Describe the types of records kept by the institution of its $\operatorname{graduates}$.

We try to keep a record of each graduate in each of the following files. Master, Class, Geographical, and Biographical. We also try to keep a current address on each graduate.

2. What educational services does the institution provide for its alumni?

Dr. Bostian, if this question means an opportunity to study for college credits, I do not know of any service that we offer to our alumni that is not offered to all people.

If this question refers to other additional services, I would suggest as an example to the alumni, the N. C. State College News, the Statelog and various other publications such as the Textile Forum, the Southern Engineer, the Agriculturalist etc. We also send a lot of information to our alumni in the form of circulars, letters, and printed leaflets.

3. Is there any systematic follow-up of its graduates? Describe.

We try to follow-up our graduates by personal correspondence, personal visits, contacts with them at alumni club meetings, and any other mediums, such as the newspapers and word-of-mouth from acquaintances and friends.

4. How often does the alumni association publish a bulletin?

We publish N. C. State College News each month during the year. A sample is attached.

5. Show by illustration the types of interests shown by the alumni in the institution.

The interests shown by all alumni are many and varied. Practically all alumni are interested in our atheletic program, some to a greater degree than others. Most alumni are interested in all phases of the college program, and they show a especial interest in their own field, such as, Engineering, Textiles, Agriculture etc. Alumni take a very active part and give freely of their time and money in behalf of the college development program, which includes the various foundations, the atheletic program and the alumni program.

6. Is any vocational placement service operated in connection with the alumni office? If so, describe.

The answer to question 6 is No. Each school operates its own vocational placement service and the alumni office is always ready to lend its effort in cooperating with the placement officer of any school.

Sincerely yours,

H. W. Taylor

Director of Alumni Affairs

You will remember in 1945-46 when R. D. Beam was Director of Foundations at State College, we made plans for and undertook to raise funds to build an Alumni Memorial Building at the College. You were one of the contributors to this building fund. At the beginning of this project, plans were prepared for an extensive building providing office spaces, assembly room, several bedrooms and a dining room. It was estimated this building would cost between \$300,000 and \$400,000. Extensive work was done at that time to raise funds for this building, and a total of \$83,931 was raised by the State College Foundation.

About this time, the Textile Foundation, the Agricultural Foundation, the Engineering Foundation and other important fund raising organizations started working for State College. All of these have received enthusiastic support with time and money of alumni and friends of the College. The total funds now being raised by all the Foundations amount to over \$300,000 yearly. The wise use of these funds has been partially responsible for State College now being recognized throughout this country as one of the most progressive technical schools.

As you know, the new Student Union Building now being completed at State College, with assembly and conference rooms, provides appropriate space for many additional college activities. You will recognize that this central meeting place will be extremely helpful to the growth and development of the entire college. It is, therefore, the best judgment of many able men serving as directors of the Alumni Association and the directors of the State College Foundation that an extensive Alumni Memorial Building as originally contemplated is not needed now.

On March 29, the Board of Directors of the Alumni Association voted unanimously to proceed with the construction of a wing to the present Alumni Building which would be used for a conference and assembly room. This room is to contain appropriate memorial features

honoring State College Alumni who lost their lives in World War II. The second floor covering the entire building will be made into bedrooms. The present building which provides ample space for Alumni Association offices is to be remodeled so as to fit in with the new structure in appearance and usefulness.

The Alumni Board also recommended that a committee of three men representing the Association and the State College Foundation be appointed with authority to proceed with plans and construction of this building as described, keeping the cost as nearly as practical within the funds available.

On April 7 at a meeting of the State College Foundation Board of Directors, the quorum present voted unanimously to accept the recommendations of the Alumni Association and to proceed with them toward the construction of this addition. A committee representing the Alumni Association and the State College Foundation has been named, consisting of Frank Turner, Chairman; R. D. Beam, and Raymond Bryan. They have been advised to proceed with the plans.

The directors present at the State College Foundation meeting, as well as the directors of the Alumni Association, are quite anxious that this building program be activated and completed. I am sure that as a contributor to this fund you also would like to see completed what now seems to be the most practical and appropriate Alumni Building.

We are sure that these three able and experienced men will provide us with a practical and useful building for this amount of money and one that you will consider appropriate. Your cooperation in this endeavor is fully appreciated.

Sincerely,

C. W. Tilson President

CW. Tilson

CWT:b

This is one of the ballots when Pop Taylor had relieved himself of the required "other" candidate but had not yet gotten himself entirely from under alumni control as now.

Coach Victor Garland Sorrell, center, head baseball mentor Tigers, is shown as he conferred with two of his leading p fielder and one of the outstanding hitters in the Ration Lea dependable catcher, is shown on the left.

Pleased With State's Prospects

VICTOR SORRELL, former ace pitcher for the Detroit Tigers and the head baseball coach at State College, is pleased with State's prospects on the diamond this spring following his first practice sessions.

Coach Sorrell, who is beginning his first year as baseball mentor at State College, is pinning his hopes on a handful of veterans and several freshmen who have gone out for the sport.

The Red Terrors will be a member of the Big Four League this year. In addition to State, Carolina, Duke, and Wake Forest compose the circuit, and observers are predicting that some good baseball games should be unreeled before the season is completed.

Jimmy Wilson of Scotland Neck, pitcher and outfielder and one of the leading hitters in the Ration League last year, and Bill Evans of Kenly, the dependable catcher, are back to boost the spirits of Red Terror fans. Paul Gibson of Winston-Salem, another hurler, also is aiding the State cause.

Howard Turner of Rocky Mount, the All-Southern grid star and State's highest scoring basketball player last season, has gone out for baseball and is expected to give State foes considerable worry. Howard has played football and basketball since he came to State College three years ago, but this spring marks his first attempt at the diamond sport.

April 12, 1954

Dear Alumnus:

The annual Spring Meeting of the Wake County Alumni Club will be held on Friday, April 23 in the West wing of the college cafeteria at 7 p. m.

The entertainment committee has arranged a splended program of fun and song which I am sure will prove enjoyable to all.

Harry Stewart has promised us a good dinner for \$1.50 per plate, and you'll miss the event of a lifetime if you stay away.

Dr. and Mrs. Bostian will be there, and the entire faculty, their wives and friends, have been invited.

We will have as our guests the new Head Football Coach, Earle Edwards, his staff and their wives. All other coaches and their wives have been invited.

At the Fall meeting we had a record crowd. We are looking forward to an even greater number returning to the campus on the 23rd.

We want you to come and bring your wife and any friends whom you may care to invite to join us for an evening of fine fellowship and fun.

So please fill out the attached form and return with your check for the number of tickets you want, in the enclosed envelope. It is important that we know by Monday morning, April 19, how many will come, so that we will know the number of meals to prepare and will have ample time to mail you your tickets.

Sincerely yours,

Dallas T. Daily, President Wake County Alumni Club

P. S. You have not been asked for dues in several years. But our finances are now down to about \$40.00. It is not compulsory, but if convenient we would like for you to include an extra \$1.00 to take care of the expense of stationery, postage and other miscellaneous items. For example, the postage alone for sending this letter to all Wake County alumni amounts to \$36.00.

Should you wish to telephone for any additional information, call either Lyman Dixon (45211), or Miss Frances Thompson (3-1010).

Mr. Eddie F. Thomas, Jr. 2416 Niagara Avenue Niagara Falls, New York

Dear Eddie:

When your letter of May 4th arrived, I put it aside until there was time to give you a reply which I hope will be satisfactory to you. Since your letter was written in pen and ink, we are making a copy of it for your convenience. You wrote as follows:

"Again I have received a request to contribute to the Alumni Fund, and again, as in the past, I am not contributing. My reasons for this are listed below.

- The Alumni Association has never bothered to tell me how my money will be spent.
- I have never received a statement or any information as to how money has been spent in the past.
- 3. I cannot understand why, in a state college, an alumni fund is necessary.

From the above three items it can be seen that I know very little about the functioning of an Alumni Association. If this lack of knowledge is my fault, it would sincerely be appreciated if you would tell me what correction is in order. However, if the fault lies with the Alumni Association, as I believe it does, there should be considerable embarrassment among your members.

In conclusion, I would like to say that until answers are received by me to the questions raised in this letter, please do not send me any further requests for money."

There is enclosed, a copy of "What is The Alumni Association, Anyway?" It was prepared for the Class of 195h, and I am glad to report that this class is completely organized and its members are enthusiastic about the Alumni Fund. The paragraphs circled with red pencil on page two contain the purpose of the Association.

On pages two and three, you will see eleven numbered items which will give you an idea of what contributions to the Alumni Fund are used for.

With respect to item 7 on page 3, I am proud to say that the Alumni Association was almost entirely responsible for the building of Owen and Tucker Dormitories. In April, 1946, a loan of \$1.1 million dollars was made by the Wachovia Bank & Trust Company to the North Carolina State College Fund, Inc. (which was founded by the Alumni Association), and a contract was let for Owen and Tucker. The 1947 Legislature appropriated money to repay the loan. These two dormitories were first occupied in September, 1948, at least one year and probably two years earlier than would have been the case had the Alumni Association not been on the job. A conservative estimate shows that these dormitories were constructed for at least \$560 thousand less than would have been the case, had we waited another six months to let the contract.

With respect to item 9 on page 3, we had 7h top flight high school boys in here last week and about 20 of them will get some scholarship help. Almost 400 boys applied for scholarship aid in this program. A copy of the Talent for Service Scholarship booklet is going to you under separate cover. Only one scholarship for \$1,000 was awarded, and it went to a Craven County boy who has a more than 97 per cent, four year, scholastic average. He placed first in the tests which were given to him here.

With respect to item 11 on page 3, we keep up the mailing list for Statelog and mail 27,000 copies once a month.

Under separate cover, we are sending you a complimentary copy of State College News, which is mailed once each month to all contributors.

The Land Crant Colleges that are considered among the best in the United States are those whose alumni support them the most generously. VPI, a neighbor of ours, and about like us in an economic way, received \$70 thousand from their Alumni last year. Texas A & M Alumni gave more than \$100 thousand to their Alumni Fund last year. Cornell, the Land Grant College of New York State, had a total of \$400 thousand from their Alumni. Clemson reported more than \$11 thousand last year, and their average gift was \$20.92, while our average was \$7.98, the average of VPI was \$17.76. There was an average of \$17,89 and a total of more than \$33 thousand given to Chapel Hill by their Alumni.

We have seven employees here. Four women and I are college employees. The college also furnishes a building, heat, Tights, and water.

The Alumni Fund receipts are spent for the following: Salaries of two women employees, the State College News, telephone, stationery and postage, printing, travel to meeting, equipment, and other things that are necessary to operate an Alumni Office. This year our Alumni Fund Committee has obligated \$2,000 to the Talent for Service Scholarship Program and, we hope to increase this very materially. These are things that the State will not provide, and neither do they provide them at other schools.

At the end of each year a report is made to contributors, showing what has been done with all money contributed to the Alumni Fund.

The greatest return I get from my donations (and I have been contributing for 28 years) is the satisfaction of having a small part in the task of making North Carolina State College more useful to the people of our State and Nation.

A contribution slip is enclosed for your convenience. I hope you will make your contribution as large as you can afford. I assure you that it will be spent wisely and every penny will be used in helping to make a State College of which you will be more proud as the years go by.

Sincerely yours,

H. W. Taylor Director of Alumni Affairs

HWT:JP

cc: Dr. Carey H. Bostian

WHAT IS THE ALUMNI ASSOCIATION, ANYWAY?

YOU'VE ASKED IT TIME AND AGAIN

IF YOU ARE WILLING TO READ THESE PARAGRAPHS, YOU WILL FIND THE ANSWER . . . AND SOMETHING OF THE PHILOSOPHY OF YOUR ALUMNI ASSOCIATION.

When you came to State College, the chances are, you came for a specific purpose. You are probably learning to be some kind of specialist. Your life here has been days and nights of working, studying, learning, burning the midnight oil to prepare yourself for some technical career.

And all the while, you have moved in your circle of interest, until the School of Textiles, or Engineering, or Design, or Agriculture, or Forestry, or Education is actually State College to you.

Oh, there are the traditions of old Pullen and Primrose, Watauga and Holladay, Old Fourth and 1911. But, down deep, your feeling is strongest for your particular department in your particular school.

Perhaps that is as it should be--in one sense. It is natural to feel closest to the field in which your talents have led you.

Responsible students have often said their greatest feeling of attachment or loyalty is to their immediate department in their particular school. Other student leaders have worked to raise that attachment to include the whole college. And that is right.

N. C. State is more than a single school or department. Loyalty to one department is interest in only one-fiftieth of the college. Loyalty to one school is interest in only one-seventh of the college. State College is nearly 50 great departments and seven great schools forming one of the fore-most centers of technical education and research in the world. It deserves more than one-fiftieth or one-seventh of our interest and devotion.

And this is where your Alumni Association comes in. Although we State

Men are folks of diversified interests and training, there is a common ground

where the agriculturist, the engineer, the textiler, the forester, the architect, and the teacher can become one. That ground is your Alumni Association.

What, exactly, is the alumni program?

Look at the words -- Alumni Association.

Alumni, of course, means former students--men and women who spent hours studying, learning, and living here to help get a better start in life.

Association, of course, means a combination of folks working toward the same useful end—(1) to promote the growth, progress, and general welfare of State College; (2) to foster among its former students a sentiment of regard for one another and devotion to their Alma Mater; (3) to interest prospective students in attending State College; (4) to help today's students understand and feel the heritage, the mission, and the spirit of N. C. State.

Service.

That is the word.

If one word--out of the thousands of words in the English language--is to be chosen to describe the Alumni Association of your college, service is the word.

The N. C. State Alumni Association is, first of all, a service organization. Its work bespeaks the claim.

- 1. It maintains as complete a record as possible on every alumnus.

 Keeping addresses current is one of its hardest jobs.
- 2. It is the immediate contact between the college and its graduates, serving the State College Clubs in each of North Carolina's 100 counties and over 25 clubs in other states with programs of speakers, movies, etc.
- 3. It keeps a biographical file on alumni—a sort of placement service, with important records on weddings, births, deaths, promotions, photos which help recommend many alumni for promotion and new jobs.

- 4. It publishes the monthly magazine, State College News, through which all participating alumni can keep up with college developments and the activities of their former classmates and friends.
- 5. It sponsors a technicolor movie featuring every activity of the college and its allied agencies -- a project into which it invested over \$3,000.
- 6. It helps local State College Clubs in their efforts to interest local high school graduates in the college-with printed matter, the movie, and personal contacts.
- 7. It played a leading role in securing Owen and Tucker dorms, an achievement well know to loyal N. C. State men and women.
- 8. It sponsors Alumni Week the first week-end of each May, enabling returning grads to see the school in operation, visit former teachers, view departmental growths, and enjoy a week-end of exhibitions, games, banquets, parades, open houses, class reunions, and N. C. State fellowship.
- V 9. It conducts the Alumni Fund, a new voluntary annual giving program through which it has already allocated \$2,000 to the college's new Talent For Service scholarship program. Talent For Service is a state-wide, grass-roots movement to provide worthy high school graduates throughout the state with an opportunity to attend N. C. State.
- V10. It serves as the link and contact between the student and the college of today and the student and the college of yesterday.
- vil. It provides the facilities and manpower for mailing Statelog, a college development publication interpreting State College to over 27,000 alumni and friends. Such a mailing each month is a major job in itself.

Soon you will be a graduate of State College. You will find these services readily available to you. And you will find more--much more--if you seek it.

The Whole philosophy of the Alumni Program is participation. When we all learn that the more folks we have on the team the more useful our college can become—then we shall be on the road to building an Alumni Association second to

none in its loyalty to its Alma Mater, in its friendship for each other, in its service to all our people.

And after all, that is what we are after--service--service that makes us feel useful and needed and worthwhile in this life.

And, also quite humanly, we welcome the feeling that quickens the pulse and tingles the spine every time we hear a Duke or Wake Forest graduate say, "My, what they are doing at State College!"

It's being said, you know. And every time it is said, it enhances the value of that sheepskin you've worked so hard to get this June. Prestige is an intangible thing, but it is one of the best-paying stocks you can have. Prestige pays dividends. You know that. You'll know it even more keenly when you get out into the highly competitive stream of life making an everyday living.

The more N. C. State progresses, the broader and more useful its services become, the more valuable your diploma will become to you--and the more you will be glad to say, "I'm a State man."

One of our earlier chancellors, who was then called president, said: "The best advertisement of a college is the character and success of its alumni."

Dr. Wallace Carl Riddick said that.

It could easily be reversed and mean just as much, if not more, by saying:

The best advertisement of an alumnus is the character and success of his college.

The character and success of your college will depend greatly on your decision to participate in your Alumni Association.

Your Student Government President, Billy Oliver, put it right aptly the other day when he said, "Participation in our Alumni Association and contributions to our Alumni Fund are actually investments in our own security."

ALUMNI ASSOCIATION OF NORTH CAROLINA STATE COLLEGE, INC.
POST OFFICE BOX 5876 RALEIGH. NORTH CAROLINA

September 20, 1954

Chancellor Carey H. Bostian Holladay Hall Campus

Dear Dr. Bostian:

Enclosed is a copy of "Cally" Hall's letter of September 18th to me, together with a copy of my reply and my letter to Mr. Walter P. Sprunt.

"Cally" Hall is president of the Class of 1924. He graduated in Textiles and is District Sales Manager for the Enka Corporation. He was active in the Y. M. C. A. in his student days and was head waiter in the mess hall his senior year.

You may be interested in knowing that he is a member of the Official Board of the First Lutheran Church in Greensboro. He was born in Wilmington and is a graduate of Wilmington High School. He married Miss Ruth Kohn of Mount Holly and they have one daughter and one son.

The check is being delivered to Mr. J. J. Stewart. Dean Cloyd and Mr. Stewart are planning to identify this gift so students will know the name of their benefactor when they make a loan from this part of the emergency loan fund. I am writing "Cally" for permission to give some publicity about this nice gift. If he is agreeable, the information will be made available to Rudolph Pate and we will carry it in State College News and the Statelog.

I am sure "Cally" would appreciate a letter from you and I think it would be very appropriate for you to write a note to Mr. Sprunt. I would like to have copies of any letters you write for Cally Hall's biographical file.

Sincerely yours,

Director of Alumni Affairs

September 18, 1954

Dear Pop:

The suggestion in your letter of September 13 to use the five hundred dollars gift as an emergency loan fund is quite agreeable and a good suggestion - enclosed find check.

I would like for the gift to be placed on record: In honor or possibly better "In Memory" of William Hutchinson Sprunt, Wilmington, N. C., a benefactor of self help students in the 1920's.

It would be appreciated if a letter were written by someone at the College to Mr. Sprunt's son, Walter P. Sprunt, The Sprunt Corporation, Wilmington, N. C., acknowledging receipt of the gift.

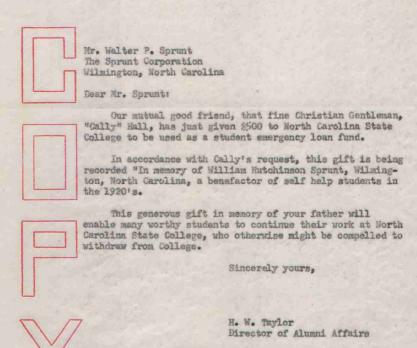

Sincerely yours,

Cally

Dear Cally:

Your letter of September 18, 195h and your check payable to North Carolina State College in the amount of \$500 have just been received.

Copy of my letter to Mr. Walter P. Sprunt is enclosed.

In behalf of the College and the Alumni Association, I wish to express to you my deepest gratitude for your generous gift to the student emergency loan fund.

Your check is being transmitted to Mr. J. J. Stewart, Dean of Student Affairs. Dean Cloyd handles the student emergency loans. A copy of this letter is going to Chancellor Bostian for his information.

Sincerely yours,

H. W. Taylor Director of Alumi Affairs
